DEVELOPMENTS IN WORLD COTTON TRADE

World cotton trade rose sharply (by an estimated 10%) in 2017/18, exceeding 9 million tonnes for the first time in four seasons. Rising world cotton mill use, and the continuing depletion of Chinese government stockpiles contributed to the expansion in cotton trade. In 2011/12 and 2012/13, world trade reached records above 10 million tonnes, boosted by the Chinese policy of stockpiling domestically produced cotton and relying on substantial imports of lower-priced foreign growths. The end of cotton stockpiling in China led to a decline in Chinese imports, from record-high levels to an average of 8 million tonnes in 2014/15 to 2016/17. Accelerated growth in world mill use and declining stocks in China are likely to translate into expansion in world trade in the near future.

World cotton imports are projected to grow 10% again in 2018/19, reaching a record volume of 10 million tonnes. Imports by China in 2018/19 are projected to grow the most in the wake of growing demand, declining domestic stocks, and additional import quotas issued. China, Bangladesh, Vietnam, Indonesia, Turkey, Pakistan and Thailand will remain the world's largest importers in 2018/19, accounting for 81% of world imports.

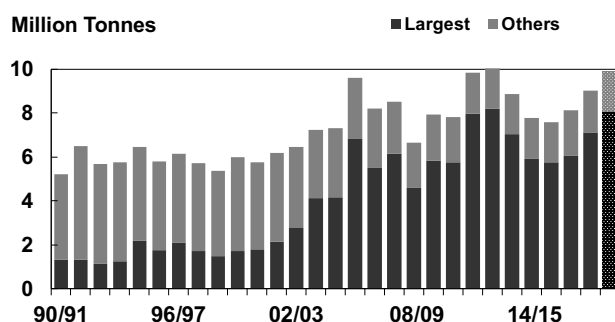

USA, Brazil, Francophone Africa, India, Australia and Uzbekistan will remain the largest exporters in 2018/19, accounting for 85% of world exports. Exports from India and Australia are projected to decline moderately but will be offset by increased exports from USA, Francophone Africa, Brazil and Uzbekistan.

World imports as a share of cotton mill use averaged 31% over the 10 seasons between 2001/02 and 2010/11. In 2011/12, the share rose to a record 44% and stayed above the long-term average over the next two years because of record imports by China. The share declined to an estimated 32% from 2014/15 to 2016/17 and rose to an estimated

36% in 2017/18 and 2018/19. World exports as a share of world cotton production also averaged 31% between 2001/02 and 2010/11 and stayed above the long-term average over the next three seasons, reaching an average of 41%. The share declined to 32% from 2014/15 to 2016/17 and is projected to reach 36% in 2017/18 and 2018/19. The lowest shares of trade to production and mill use since 1990/91 were recorded in 2008/09, at 28%.

Substantial changes in cotton trade flows have occurred over the past 15 years. The decline in mill use in developed economies and the rapid expansion of the spinning industry in Asia has led to a major shift in the destinations for world exports. Asia became the primary destination for cotton shipments over the past 15 years. In 1998/99, Asia accounted for 58% of world mill use, 47% of world imports and 4% of world exports. In 2018/19, Asia is projected to account for 80% of world mill use, 83% of world imports and 12% of world exports.

Imports by China are Growing

For the past four seasons, China restricted imports by limiting the release of import quotas and releasing cotton from the government reserve to mills. Under the terms of its accession agreement to the WTO, China is obliged to establish a tariff-rate-quota (TRQ). The in-quota tariff is 1% for the first

894,000 tonnes of imports each calendar year. Additional quotas can carry a tariff of 1% or be subject to a sliding scale of between 5% and 40%. The purpose of the sliding scale is to ensure that the effective cost of imported cotton exceeds international market prices and thus boosts prices paid to farmers in China. In 2017/18, only the obligatory (TRQ) import quota was issued by China. As a result of limited import quotas, imports by China were close to 1.3 million tonnes in 2017/18. In the same season, nearly 2 million tonnes of cotton were sold from the government reserve to mills in China.

In the three seasons prior to 2014/15, China implemented a system of minimum support prices by directly purchasing cotton from producers and stockpiling it in the government strategic reserve. During this period, the Chinese government purchased for its reserves a total of 16 million tonnes, most of which was later sold to spinning mills. The size of the reserve at the end of 2017/18 was estimated at 4.5 million tonnes, accounting for almost 50% of mill use by China and 24% of world stocks. While most of the cotton produced domestically was acquired by the government and has been stored in the national strategic reserves during the

three seasons of implementation of this policy, large imports became necessary and boosted world trade to record levels. From 2011/12 through 2013/14, China imported 12.8 million tonnes of cotton.

In 2018/19, China is expected to increase imports to an estimated 2 million tonnes, the largest import figures in five seasons, because of rising demand and shrinking stocks in the government reserves. An additional import sliding scale quota for 800,000 tonnes has already been issued by the government. The release of the reserves to domestic mills will continue, but quality of the remaining stocks is often below spinning mills' requirements. With projected imports, China once again becomes the largest importer in 2018/19, accounting for 20% of world imports.

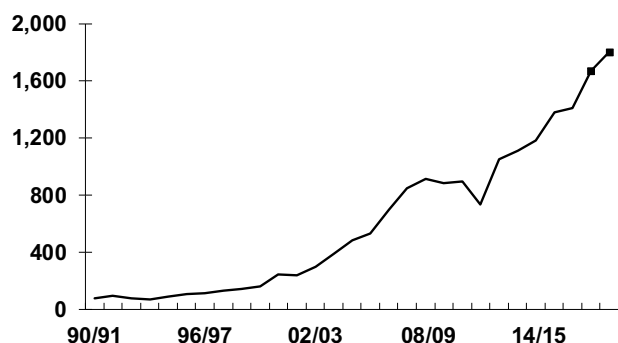

In 2017/18, USA was the largest supplier of cotton to China, while Australia, Brazil, India, Uzbekistan and West Africa are responsible for most of the remaining volume. An additional 25% tariff on U.S. cotton was imposed by China in July 2018, which could affect the volume of U.S. sales to China in 2018/19.

Bangladesh is Importing More

Imports by Bangladesh are projected to increase by 8%, reaching 1.8 million tonnes in 2018/19 and accounting for 18% of world imports. It is projected that Bangladesh will be the second largest importer of cotton in 2018/19. Mill use in Bangladesh continues to grow, supported by the expansion of textile exports and advancing development of the supply chain. India recently became the largest supplier of cotton to Bangladesh, as Uzbekistan's share of Bangladesh imports is declining. USA, several Central Asian countries, Africa and Australia supply most of the rest of Bangladeshi imports. Indian and Uzbek growths have the largest market share in Bangladesh because of price competitiveness, short delivery times, and the quality characteristics preferred by spinners.

IMPORTS: BANGLADESH

Thousand Tonnes

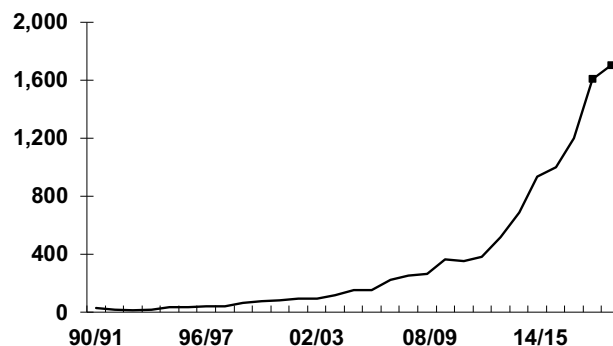

Textile Industry Expansion in Vietnam Continues

The textile industry in Vietnam has attracted substantial investments, including spinning, weaving and knitting, dyeing, and finishing. Cotton mill use in Vietnam continues to show robust growth, and imports are projected to increase by 6% in 2018/19 to 1.7 million tonnes. Major textile industry growth factors included the granting of most favoured nation (MFN) status by the USA in 2001 and the accession of Vietnam to the World Trade Organization in 2007. The government of Vietnam provides sizeable incentives for foreign investments in textile production. Since 2000, spinning capacity in Vietnam has tripled. Strong demand for cotton yarn from China and Turkey is another factor causing Vietnam to increase its imports in recent seasons. Vietnam is the world's third largest importer after China and Bangladesh and will account for 17% of world imports in 2018/19. USA supplies about 50% of Vietnamese imports, while India, Australia, Brazil, and African countries provide most of the remaining 50%.

IMPORTS: VIETNAM

Thousand Tonnes

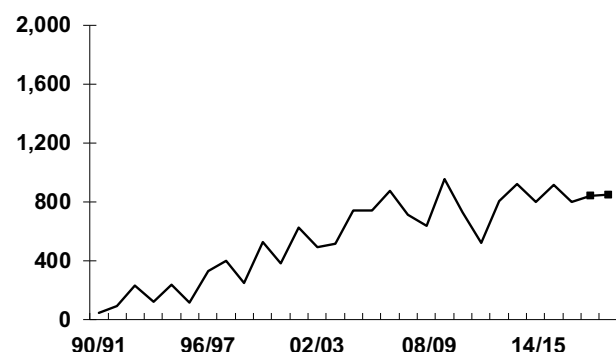

Turkey to Continue with Major Imports

Cotton mill use in Turkey is projected to grow in 2018/19, reaching 1.7 million tonnes. Even though modest growth in production in Turkey is projected, production is expected to reach 850,000 tonnes and the domestic spinning industry will remain dependent on imports for about half of its mill use. In 2018/19, cotton imports by Turkey are projected to remain high at about 850,000 tonnes, equivalent to 9% of world trade and the fourth largest after China, Bangladesh and Vietnam. The textile and garment industries remain key components of the Turkish economy and account for 8% of the country's GDP as well as 18% of exports. Turkey is the second largest textile exporter to the EU after China and is the fifth largest consumer of cotton after China, India, Pakistan and Bangladesh. Since April 2016, US cotton is subject to a 3% antidumping duty in Turkey. Despite the

IMPORTS: TURKEY

Thousand Tonnes

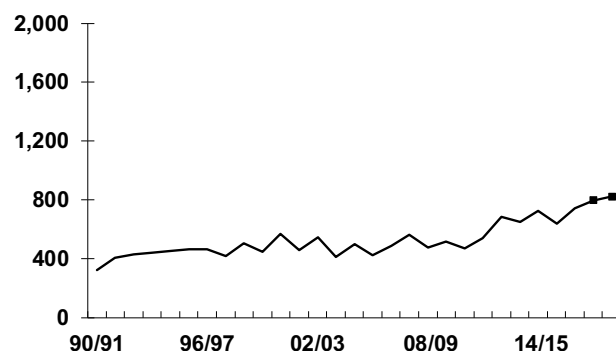

duty, about 45% of Turkish imports in 2017/18 originated in USA, while the balance came from Brazil, Greece, Syria, Turkmenistan, Australia, and Azerbaijan. The high share of US cotton in Turkish imports is explained by the importance of GSM-102 credit guarantees, actively used by Turkish buyers. Long-term credit (up to 18 months) and competitive credit terms fit well with Turkish banks and importers. The USA's Cotton Council International runs an active marketing and promotional campaign in Turkey.

Cotton Mill Use in Indonesia is Rising

Cotton mill use in Indonesia is projected to continue growing in 2018/19 as spinning mills are running at a higher capacity, and cotton has regained some market share from polyester. Imports by Indonesia are projected to increase by about 3.5% in 2018/19, reaching 825,000 tonnes, a gain of 185,000 tonnes in three seasons. Indonesia is projected to account for 8% of world imports and is the fifth largest cotton importer in the world. Indonesia is a large exporter of cotton yarn to China. In 2017/18, the USA, Brazil, Australia, India, Greece and Africa were the major suppliers of cotton to Indonesia.

IMPORTS: INDONESIA

Thousand Tonnes

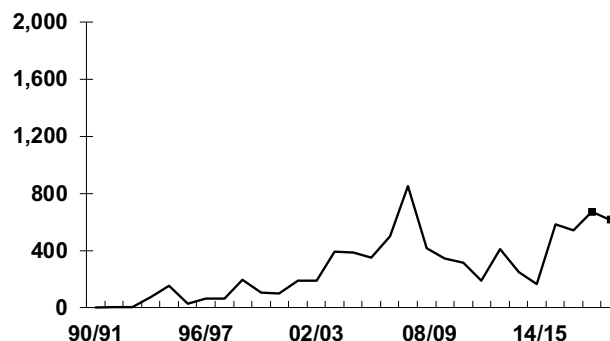

Imports by Pakistan Remain High

Production in Pakistan recovered by 8% to 1.8 million tonnes in 2017/18 after deep declines over the previous two seasons, when farmers shifted to corn and sugarcane when possible for better returns. Production also suffered setbacks in recent seasons due to widespread damage caused by insects and the leaf curl virus. It is projected that in 2018/19, production will remain close to 1.8 million tonnes. Mill use in Pakistan is projected to remain close to 2.3 million tonnes in 2018/19. As a result, Pakistan's cotton imports are projected to remain significant, exceeding 600,000 tonnes. In addition, large demand for cotton yarn, especially from China, and increasing demand for textiles as the result of the granting of duty-free status for textile exports of Pakistan to Europe under the Generalised System of Preferences (GSP), support cotton mill use in Pakistan. Imports by Pakistan will account for 6% of the world's total in 2018/19. Major sources of imports by Pakistan are USA, India, Afghanistan, Brazil, and Central Asia.

IMPORTS: PAKISTAN

Thousand Tonnes

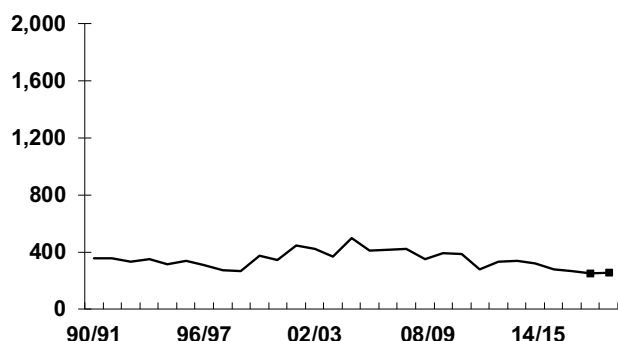

Imports by Thailand Remain Stable

In 2018/19, Thailand's cotton imports are projected to increase moderately by 1.5% to 255,000 tonnes, accounting for 3% of world trade. The textile industry in Thailand started to recover in 2012/13, supported by economic growth and increased demand for textile exports, especially cotton yarn exports to China. However, over the past two seasons, cotton mill use and imports suffered some setbacks due to increased competition from cheaper cotton yarn from Vietnam and India, resulting in larger inventories of cotton yarn. However, projected economic recovery and improving competitiveness of larger spinning mills in Thailand could lead to higher demand and imports of cotton. The USA, Australia, Brazil, India and West Africa were the largest suppliers of cotton to Thailand in 2017/18.

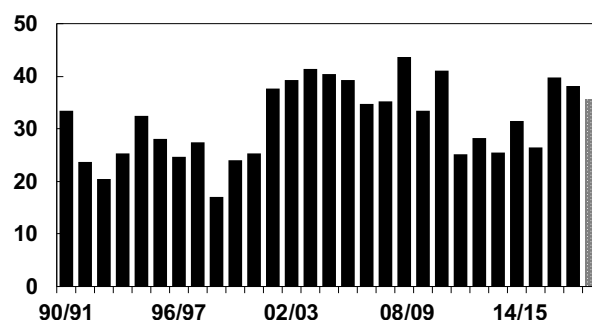

IMPORTS: THAILAND

Thousand Tonnes

EXPORTS: USA

World Market Share (%)

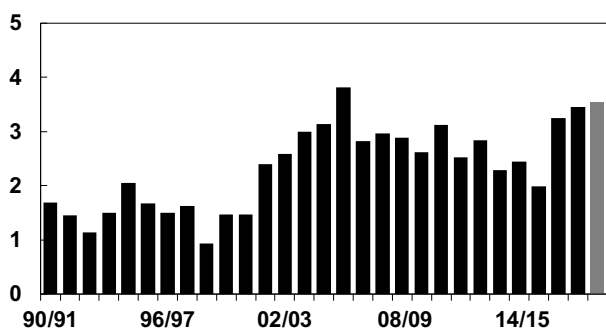

Exports from the USA Are Projected to Remain High

USA remains the world's largest exporter and is projected to increase exports moderately in 2018/19 to reach 3.5 million tonnes, despite a small decrease in production. USA will account for 36% of world exports (a small decline from 2017/18). US cotton is competitively priced and forward sales at the beginning of 2018/19 were well ahead of commitments made for 2017/18 at the same stage of the season. Vietnam remained the largest destination for U.S. cotton in 2017/18, accounting for 20% of exports, ahead of China, which accounted for 16% of US exports. Turkey accounted for about 11%, while Indonesia was the fourth largest importer of US cotton and accounted for 10% of US shipments in 2017/18. Large shipments were made to Pakistan, Mexico, Bangladesh, India, Thailand, Korea and Taiwan.

EXPORTS: USA

Million Tonnes

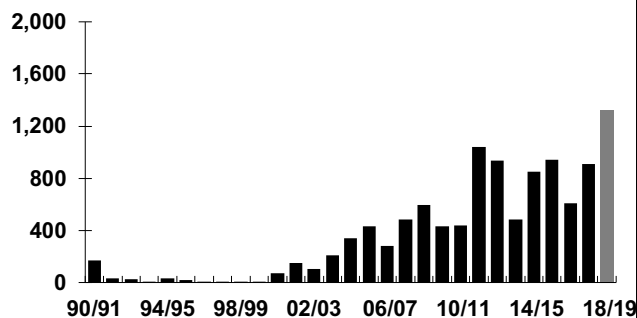

Exports from Brazil Expected to Increase Sharply

Production in Brazil rose by more than 30% in 2017/18 to a record 2 million tonnes and is projected to increase to 2.1

EXPORTS: BRAZIL

Thousand Tonnes

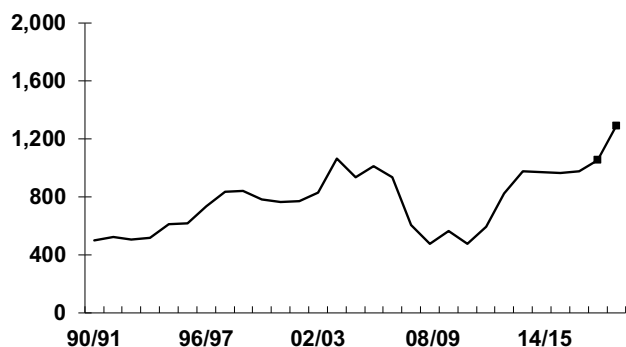

million tonnes in 2018/19 as a result of higher domestic prices and a relatively weak Brazilian real. As a result, exportable surplus in Brazil rose substantially and exports by Brazil are projected to increase by 45% in 2018/19 to reach 1.3 million tonnes. Brazil will be the second largest exporter in 2018/19, accounting for 13% of world exports. In 2017/18, Vietnam accounted for 21% of exports from Brazil, while Indonesia accounted for 20%. Turkey and Bangladesh accounted for 11% each. China, Malaysia, Pakistan, Korea and Thailand account for most of the remaining volume.

CFA Zone Exports Rise

CFA Zone cotton production is projected to rise in 2018/19 for the third consecutive season, reaching 1.3 million tonnes, the largest volume on record, due to relatively high prices received by farmers. Increased production will provide a historically high amount of fibre available for exports. In 2018/19, exports from the CFA zone are projected to increase by 22%, reaching 1.3 million tonnes and accounting for 13% of world exports. China and East Asian destinations have become the most important in the composition of the CFA zone exports.

EXPORTS: CFA ZONE

Thousand Tonnes

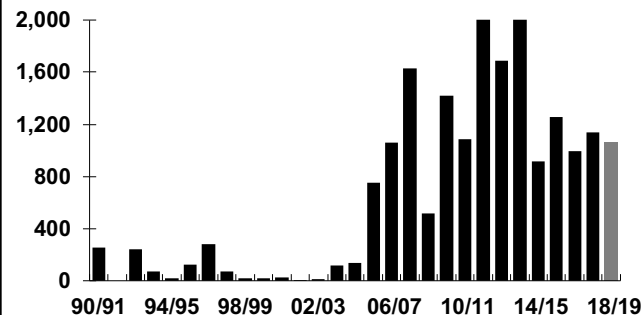

Indian Exports Set to Decline

India's cotton production is expected to decline moderately in 2018/19, reducing exportable surplus. Exports by India are projected to decline by 6% in 2018/19 to 1.1 million tonnes and account for 11% of world exports. India emerged as one of the largest cotton exporters in 2005/06 as a result of increased domestic production. Favourable growing conditions, low incidence of pests and diseases, increased planting of new higher-yielding varieties, and biotech cotton led to the higher output. Improved crop management practices, increased cotton demand and relatively high market prices resulted in improved yields, better quality and increased area over the past several seasons. In 2011/12, India exported 2.4 million tonnes, accounting for 24% of world exports.

In 2017/18, Bangladesh was the largest destination for Indian cotton, accounting for an estimated 37% of Indian exports, while Pakistan accounted for 19%. Vietnam accounted for 18% and China for about 11% of Indian exports. East Asian markets are also important destinations for India. India imports extra-fine and fine cotton varieties from USA, Egypt and West Africa, as well as some upland varieties based on price considerations. For 2018/19, imports by India are projected to remain stable at 360,000 tonnes.

EXPORTS: INDIA

Thousand Tonnes

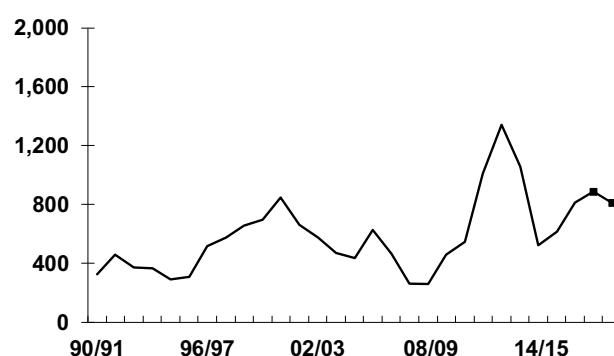

Exports from Australia Declining

Cotton production in Australia is expected to drop substantially in 2018/19 because of a sharp reduction in water supply. Exports from Australia in 2018/19 are expected to decline by 10% to 800,000 tonnes, and Australia is projected to be the fifth largest exporter, accounting for 8% of world trade. Australian exports reached a record of 1.35 million tonnes in 2012/13 as a result of two years of abundant rainfall and higher production. China accounted for an estimated 25% of exports from Australia in 2017/18, Vietnam accounted for 22% and Bangladesh for 15%. Indonesia, Thailand and Turkey were other major destinations for Australian cotton.

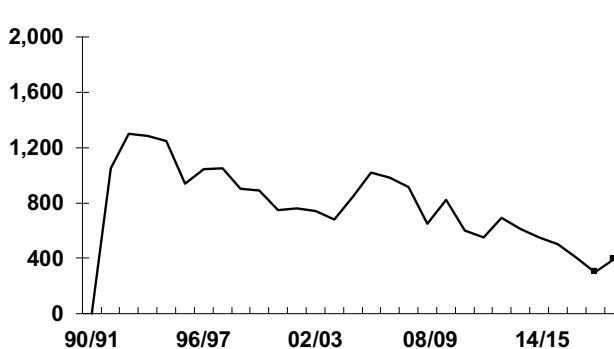

EXPORTS: AUSTRALIA

Thousand Tonnes

EXPORTS: UZBEKISTAN

Thousand Tonnes

Exports from Uzbekistan Decline

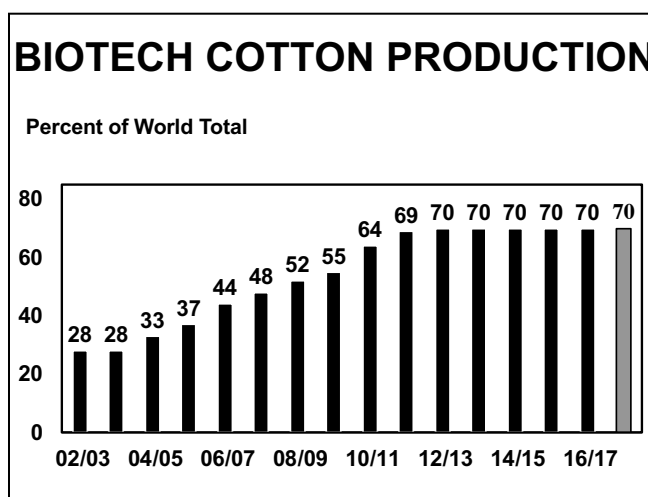

Production in Uzbekistan is projected almost unchanged at about 800,000 tonnes in 2018/19. The share of cotton directed to domestic mills continues to increase as investments in the spinning sector of Uzbekistan grow, benefiting from a 20% discount on Uzbek cotton and rising demand for cotton yarn from China, Russia and other markets. It is estimated that close to 50% of production is consumed

of extra-fine. Little change in stocks is expected in 2017/18 and 2018/19.

Biotech Cotton Dominates Trade

Biotech cotton production remains significant. Based on officially reported data, biotech cotton accounted for 20% of world area, 28% of world production and 33% of world exports in 2002/03. In 2017/18, it is estimated that biotech cotton accounted for 65% of world area, 70% of world production, and 64% of exports. World exports of biotech cotton are estimated based on production shares in exporting countries. The largest exporters of biotech cotton are USA, India, Australia and Brazil.

Consumption of extra-fine cotton among extra-fine cotton producers is projected to grow moderately (up 3%) in 2018/19, reaching 350,000 tonnes. Most of the increase is expected in China, where mill use is estimated to reach 150,000 tonnes (up 8%) in 2018/19, accounting for 43% of the total among the extra-fine cotton producers. Mill use of extra-fine cotton in India in 2018/19 is projected stable at about 150,000 tonnes as well. No changes in exports of extra-fine cotton are projected for 2018/19, remaining at an estimated 240,000 tonnes. USA, Egypt and Central Asia will account for most of exports in 2018/19. China and India will remain the largest importers of extra-fine cotton. World stocks of extra-fine cotton rose by 35% in 2016/17, reaching 233,000 tonnes, and almost equal to world exports

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1984/85, Argentina reports exports to China (Taiwan) of 20,730 tons; China (Taiwan) reports imports from Argentina of 19,740 tons. Imports may differ from exports for a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

1/ Data on exports by Paraguay and Zimbabwe during 1984/85 are not available.

*The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1986/87, Argentina reports exports to China (Taiwan) of 250 tons; China (Taiwan) reports imports from Argentina of 200 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters' report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1993/94, Australia reports exports to Japan of 127,530 tons; Japan reports imports from Australia of 122,000 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1998/99, Australia reports exports to Japan of 132,890 tons; Japan reports imports from Australia of 128,040 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2004/05, Australia reports exports to Japan of 43,770 tons; Japan reports imports from Australia of 44,350 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2009/10, Australia reports exports to Japan of 18,190 tons; Japan reports imports from Australia of 17,830 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2014/15, Australia reports exports to Japan of 12,190 tons; Japan reports imports from Australia of 10,820 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.
