DEVELOPMENTS IN WORLD COTTON TRADE

World cotton imports are projected to reach 9 million tons in 2007/08, the second highest level of imports since the record of 9.7 million tons was reached in 2005/06. Increased production in importing countries led to a decline in world imports to 8.2 million tons in 2006/07. China (Mainland) contributed the most to the increased supply and reduced world imports in 2006/07 as a result of a record domestic supply of almost 11 million tons, exceeding mill use by 500,000 tons. In 2007/08, the supply of cotton in China (Mainland) is projected to decline by 1 million tons, resulting in a projected increase in world imports.

China (Mainland), India, Pakistan and Turkey, the four largest cotton-consuming countries, became increasingly dependent on cotton imports during the past decade. Cotton production in these countries was not able to meet growing mill use. World cotton imports rose from 5.7 million tons in 1998/99 to 9.7 million tons in 2005/06 (70% growth). The share of the four countries in world imports rose from 11% in 1998/99 to 55% in 2005/06. Significant increases in cotton production during 2006/07, especially in China (Mainland) and India led to a decline in the share of these countries in world imports to 45%. India became one of the largest exporters of cotton in 2006/07, and only the USA is expected to export more cotton during 2007/08. The projected increase in imports by China (Mainland) in 2007/08 will raise the share of the four largest consuming countries in world imports to 52%.

World imports as a share of world consumption averaged 31% between 1998/99 and 2004/05, reached a record of 39% in 2005/06 and declined to an estimated 31% in 2006/07. During 2007/08, world imports as a share of consumption are projected to increase to 33%. World exports as a share of world cotton production averaged 31% between 1998/99 and 2004/05, reached a record of 39% in 2005/06 and declined to 32% in 2006/07. A larger share of world production estimated at 36% is projected to be traded internationally during 2007/08. There are now clear trends in the shares of imports in world consumption and of exports in world production observed since 1980/81. The shares fluctuated since 1980/81 in a narrow range between 29 and 34 percent, with rare spikes experienced in 2004/05 and 2005/06.

Substantial changes in cotton trade flows occurred during the past decade. Industrial countries (North America, Western Europe, Australia and Japan) accounted for 28% of world imports and 36% of world exports in 1998/99. The decline in mill use in industrial countries, and the rapid expansion in Asia, led to a major shift in the destination of world imports. In 2006/07, industrial countries accounted for 8% of world cotton imports and 45% of world exports. The share of industrial countries in world trade is projected to change to 7% and 46%, respectively, during 2007/08.

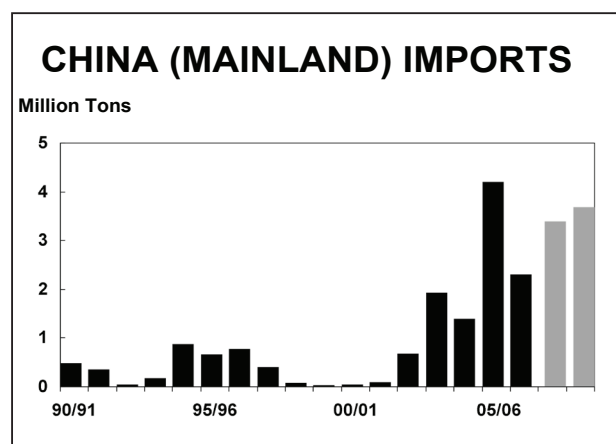

Asia became the primary destination of cotton shipments during the past decade. In 1998/99, Asia accounted for 65% of world mill use, 50% of world imports and 10% of world exports. In 2006/07, Asia accounted for 81% of world mill use, 76% of world imports and 15% of world exports. It is projected that in 2007/08, Asia will account for 82% of mill use, 79% of world imports and 16% of exports. In contrast, Africa's share of world mill use, exports and imports declined during the last decade. In 1998/99, Africa accounted for 3% of world imports and consumption, and 23% of world exports. It is projected that in 2007/08, Africa will account for 2% of world mill use, 2.7% of imports and 14% of world exports.

Compared with 1998/99, cotton production in South America is projected to double in 2007/08 as a result of rapid expansion of production in Brazil starting in 2003/04. South America became a net exporter of cotton starting in 2003/04. South America is projected to account for 8% of world exports and 3% of world imports in 2007/08, compared with 6% of world exports and 8% of world imports in 1998/99.

Imports by China (Mainland) are Projected to Rebound

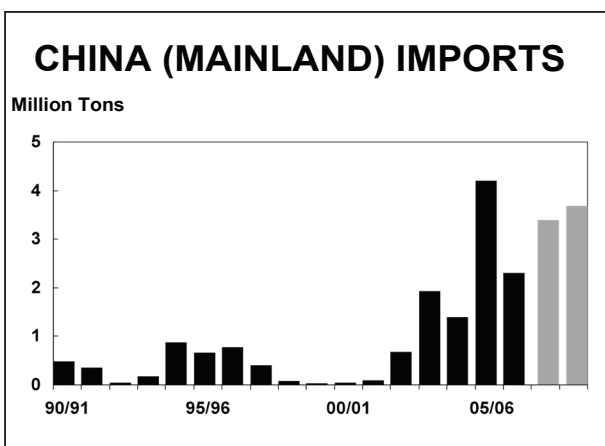

The rapid expansion of the textile industry in China (Mainland) was the major factor leading to record world cotton mill use and trade during the past decade. China (Mainland) accounted for 83% of additional world mill consumption of cotton between 2001/02 and 2006/07. China (Mainland)'s cotton production has been unable to meet the substantial increase in domestic cotton mill use, leading to large imports starting in 2002/03 and reaching a record 4.2 million tons in 2005/06, accounting for 43% of world imports. A policy by the Government of China (Mainland) to encourage an increase in stocks contributed to the rise in imports during 2005/06. In 2006/07, because of record domestic production in China, cotton supplies reached a record of 11 million tons leading to a decline in imports to an estimated 2.3 million tons, accounting for 28% of world imports. The projected decline of 1.1 million tons in cotton supplies in China (Mainland) in 2007/08 will lead to an increase in imports, estimated at 3.4 million tons, accounting for 38% of world imports.

In addition to large domestic supplies of cotton, the implementation of the sliding-scale duty quota system played an important role in curbing imports by China (Mainland) during 2006/07. During most of 2006/07, prices for imported cotton adjusted for a VAT, sliding-scale duties and port charges were not attractive to Chinese mills compared to domestic cotton prices, leading to a decline in imports.

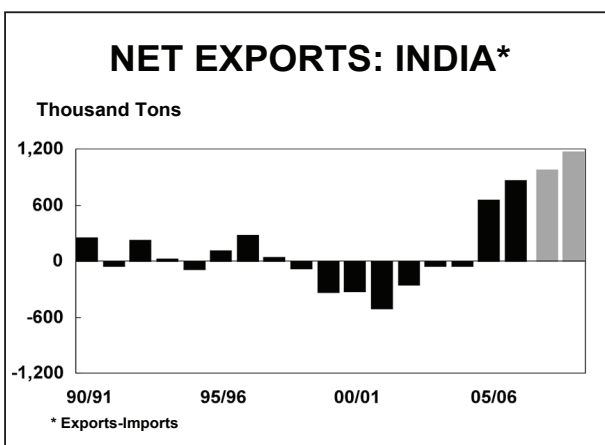

As a result, ending stocks in China (Mainland) declined by an estimated 1.1 million tons during 2006/07.

In 2006/07, China (Mainland) imported an estimated 900,000 tons from the USA (39% of the total), compared with 2 million tons (47%) in 2005/06. India was the second largest supplier of cotton to China (Mainland) during 2006/07, accounting for 600,000 tons (25%) of Chinese imports, up from 520,000 tons (12%) in 2005/06. Uzbekistan was the third largest supplier of cotton to China (Mainland) in 2006/07 accounting for 270,000 tons (11%) compared with 420,000 tons (10%) shipped in 2005/06. Africa accounted for 330,000 tons (14%) of imports by China (Mainland) in 2006/07 compared with 660,000 tons (16%) in 2005/06. Imports by China (Mainland) from Australia declined to 160,000 tons (7%) in 2006/07, down from 280,000 tons (7%) in 2005/06.

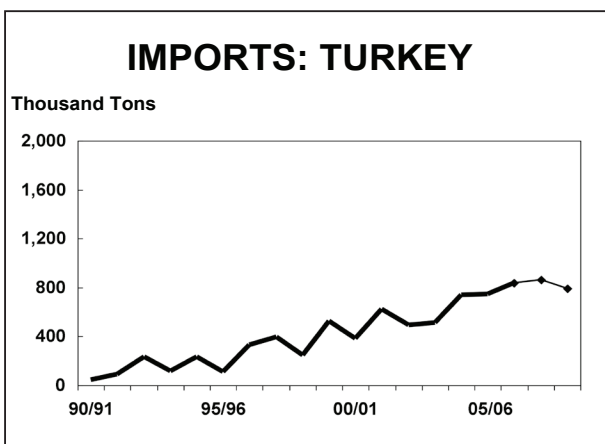

India Becomes the Second Largest Exporter

India is the second largest consumer of cotton, experiencing a high rate of growth in mill use, fueled by strong domestic and export demand for textiles. Indian cotton mill use is projected to rise by 5%, reaching 4.2 million tons in 2007/08. Favorable growing conditions, a low incidence of pests and diseases, increased planting of new higher yielding varieties, the use of Bt cotton, improved crop management practices, increased cotton demand that led to higher market prices resulted in improved yields, quality and increased area during the past three seasons. As a result, a record crop of 5.1 million tons is projected for 2007/08. Because of its increased cotton supply, India became one of the largest net-exporters of cotton in 2005/06, with exports projected to reach 1.1 million tons or 12% of world exports in 2007/08, making India the second largest exporter. Almost two-thirds of Indian exports were directed to China (Mainland) in 2006/07. Pakistan, Bangladesh and East Asia are other major destinations for Indian cotton. India remains an importer of about 100,000 tons of mostly extra-fine and fine cotton varieties from the USA and Egypt.

Imports by Turkey Remain High

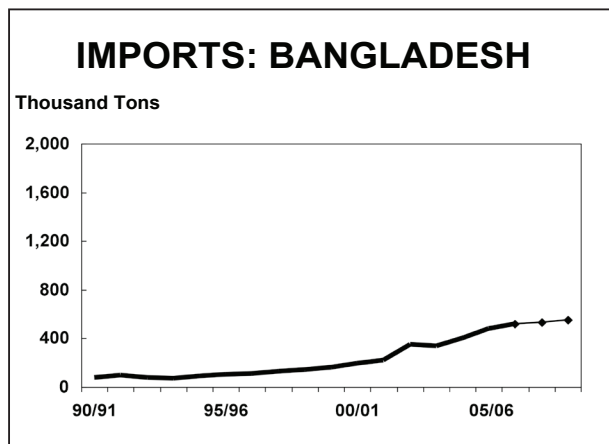

Turkey remained the second largest importer of cotton in 2006/07 for the fourth consecutive season, with imports reaching an estimated 840,000 tons, or 10% of the world total. After reaching a record 1.575 million tons in 2006/07, cotton mill use in Turkey is expected to rise moderately to 1.6 million tons in 2007/08. Increased competition from China (Mainland) and other textile producers and the appreciation of the Turkish lira against the U.S. dollar during the past two seasons affected the competitiveness of Turkish textiles. Production of cotton in Turkey is not projected to increase in 2007/08 and will be close to 800,000 tons, mostly because of a shortage of irrigation water. In 2007/08, Turkey is projected to remain the world's second largest importer with imports of 860,000 tons, or 10% of the world total. The USA remains the largest supplier of cotton to Turkey, accounting for 50% of imports. Greece and Syria are two

other major suppliers of cotton to Turkey. In 2006/07, about 60% of imports by Turkey came from the USA, 15% from Central Asia, 10% from Greece and 10% from India. The high share of U.S. cotton in the Turkish imports is explained by the availability of the GSM-102 credit guarantees, actively used by Turkish buyers. Cotton Council International (CCI) and Cotton Incorporated (CI) of the USA run active marketing and promotional campaigns in Turkey.

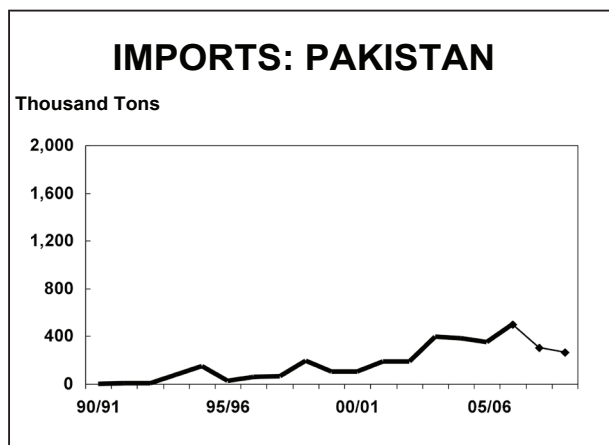

Bangladesh Becomes the World's Third Largest Importer

The rapid expansion of weaving and spinning in Bangladesh during the past several years led to significant growth in cotton import demand, making Bangladesh the world's third largest importer of cotton since 2005/06. In 2006/07, cotton imports by Bangladesh were estimated at 520,000 tons, accounting for 6% of world trade. About 45% of imports in 2006/07 originated from Central Asia, 10% from both the USA and India, 9% from Africa, and 7% from both Pakistan and Australia. Central Asian cotton gained market share in Bangladesh because of price competitiveness and short delivery times. Indian cotton is also gaining market share during the past two seasons for the same reasons. Substantial investments by the private sector in the Bangladesh spinning industry continue, and it is expected that cotton imports will reach 535,000 tons in 2007/08.

Imports by Pakistan Decline

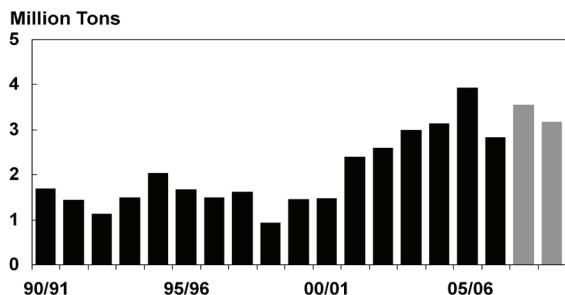

Cotton consumption in Pakistan has expanded continuously since 1998/99 in response to export-driven demand for textiles. The spinning and weaving industries continue to invest heavily in new equipment as well as to renovate existing equipment. During 2006/07, cotton mill use in Pakistan rose by 3%, reaching an estimated 2.6 million tons, and mill use is projected to reach 2.7 million tons in 2007/08. Cotton production in Pakistan was estimated at 2.1 million tons during the past two seasons. In 2006/07, Pakistan imported 470,000 tons of cotton, or 6% of world imports. Better prices received by farmers, improved management practices, the availability of quality inputs and an increase in Bt cotton planting are expected to result in an increase in production to 2.4 million tons in 2007/08. Consequently, imports are expected to decline to 260,000 tons, or 3% of world trade. The USA, Brazil, India and Uzbekistan are the major suppliers of cotton to Pakistan.

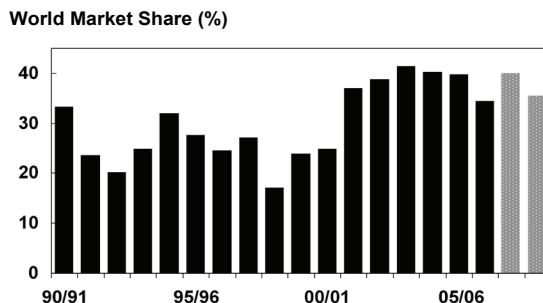

Record Exports from the USA

Record supplies of cotton in the USA led to consecutive record exports during the last five seasons starting in 2001/02. In 2006/07, U.S. exports declined by 1.1 million tons to 2.8 million tons because of increased supplies in major cotton consuming countries and reduced imports by China (Mainland). The projected increase in imports by China (Mainland) during 2007/08 is expected to lead U.S. exports to increase to 3.7 million tons, even though U.S. production is expected to decline due to a shift in area from cotton to ethanol-bound commodities. Reduced U.S. exports during 2006/07 resulted in a build up in ending stocks to 54% of use (consumption plus exports). Large beginning stocks and a continued reduction in U.S. mill use are projected to result in an exportable surplus for the U.S. of 4.9 million tons in 2007/08, almost unchanged from 2006/07. China (Mainland) accounted for more than 32% of U.S. shipments during 2006/07, compared with 50% in 2005/06. Other countries in Asia accounted for 30% of U.S. exports in 2006/07, compared with 20% in 2005/06, with the largest shipments going to Indonesia, China (Taiwan) and Thailand. Turkey was the second largest destination for U.S. cotton in 2006/07, accounting for 18% of exports, compared with 10% in 2005/06, while Mexico remained the third largest destination during the past two seasons, accounting for about 10% of U.S. shipments.

EXPORTS: USA

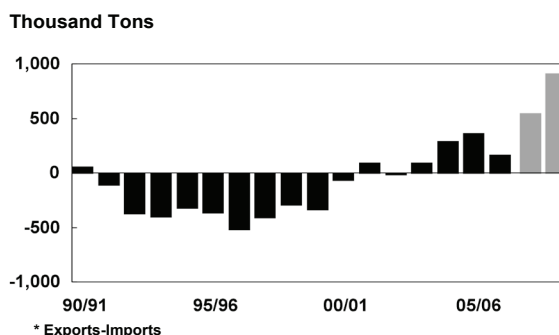

U.S. EXPORTS

Brazil Will Expand Exports

Cotton production in Brazil began to expand rapidly in 2003/04 because of new high yielding commercial production in Central Brazil, including the state of Mato Grosso. Cotton mill use remained relatively stable during the past four seasons and is projected to remain unchanged in 2007/08, at 900,000 tons. Starting in 2003/04, Brazil became a net exporter and in 2005/06 exported 430,000 tons. However, production during 2005/06 declined by 250,000 tons due to lower cotton prices, high input costs and shifts in area to competing crops. As a result, exports in 2006/07 declined to 280,000 tons. In 2006/07 production in Brazil reached 1.5 million tons. Increased production of cotton in 2007 will result in projected exports above 600,000 tons during 2007/08, making Brazil the world's fourth largest exporter after the USA, India and Uzbekistan. China (Mainland), Pakistan, Argentina, Indonesia, Japan and the Republic of Korea are major buyers of Brazilian cotton.

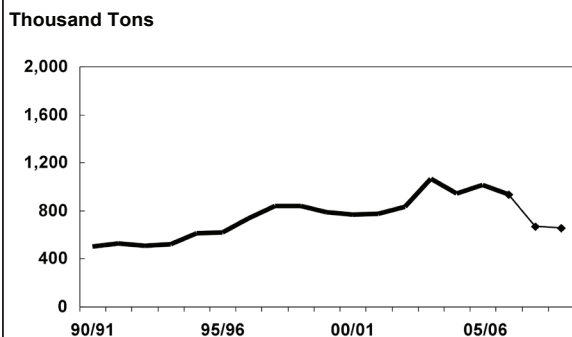

NET EXPORTS: BRAZIL*

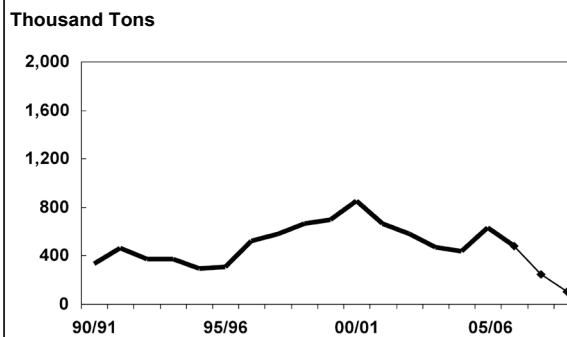

Exports from the CFA Zone and Australia Will Decline

CFA-zone production is projected to decline for a third straight season in 2007/08 to 650,000 tons, down from 1.1 million tons in 2004/05. The appreciation of the CFA franc during the past two years, which is pegged to the euro, has led to a decline in prices received by producers. Lower revenues were accompanied by increased input costs. As a result, exports from the CFA zone are projected to decline to 670,000 tons (8% of world exports) in 2007/08, down from 940,000 tons exported in 2006/07 and 1 million tons exported in 2005/06. China (Mainland) became the largest

EXPORTS: CFA ZONE

EXPORTS: AUSTRALIA

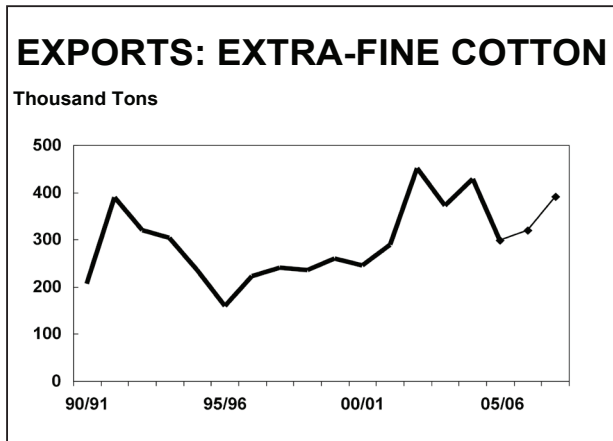

destination for exports from the CFA zone during 2006/07, accounting for one-third of all shipments.

Cotton production in Australia continues to decline because of shortages of irrigation water. In 2007/08, cotton plantings are estimated at the lowest since 1978/79, resulting in a projected crop of 115,000 tons, the lowest since 1980/81. As a result, exports from Australia are projected to decline to 250,00 tons in 2007/08, down from 480,000 tons in 2006/07. China (Mainland), Indonesia and other countries in East Asia are major destinations for Australian cotton.

World Extra-fine Exports are Projected to Increase

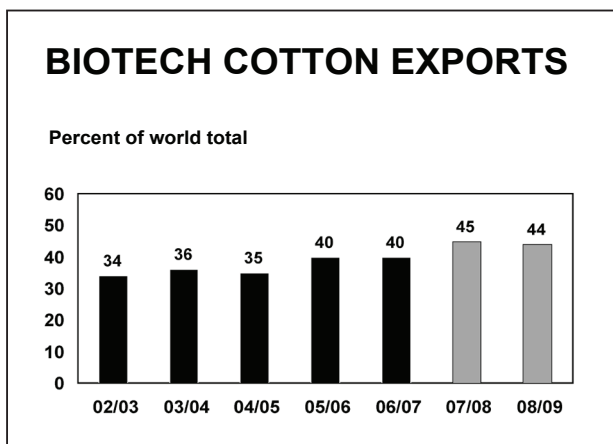

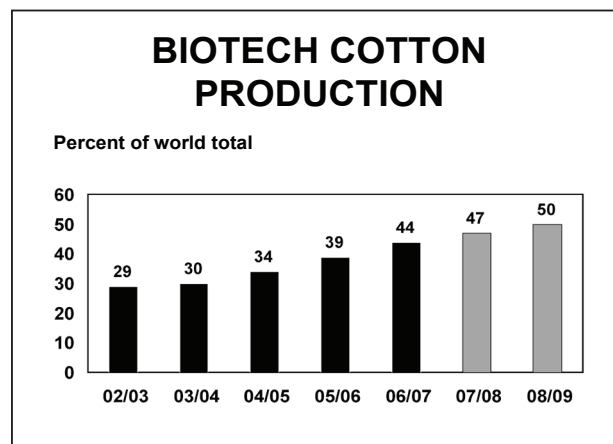

Rising extra-fine cotton production and expected lower prices in 2007/08 could encourage a rise in demand and increased exports. Extra-fine cotton export shipments are projected at 391,000 tons in 2007/08, up 22% from 2006/07 and up 31% from 2005/06. Most of this increase is expected to come from larger U.S. Pima exports (174,000 tons projected in 2007/08 vs. 146,000 tons in 2006/07), larger Egyptian L.S. exports (80,000 tons vs. 50,000 tons) and larger Sudanese Barakat exports (50,000 tons vs. 24,000 tons). However, extra-fine cotton imports by producing countries are expected to decline for the third consecutive season to 109,000 tons, due to a projected decline in Chinese imports. China (Mainland) doubled its production of extra-fine cotton to 170,000 tons in 2006/07 and is expected to produce at least the same amount in 2007/08. Despite growing consumption in China (Mainland), large domestic stocks are expected to reduce the need for imports in 2007/08. Indian imports are expected to continue to increase to 85,000 tons, as domestic production is rising slower than mill use.

Biotech Cotton Trade Rising

Biotech cotton production and trade continues to expand. Based on officially reported data, biotech cotton accounted for 21% of world area, 29% of world production and 34% of world exports in 2002/03. In 2006/07, it is estimated that biotech cotton accounted for 36% of world area, 44% of world production and 40% of world exports. It is projected that biotech cotton will account for 40% of world area, 46% of world production and 45% of world exports in 2007/08. World exports of biotech cotton are estimated based on the production shares of biotech cotton in exporting countries. The largest exporters of biotech cotton are the USA, Australia and India.

There are no price differentials for biotech and non-biotech cotton fiber or textiles containing biotech cotton. There is no evidence of rejection or price discrimination of biotech cotton by any segment of the market or region. In practice, markets do not identify biotech cotton content, but rather evaluate cotton properties based on quality characteristics. The share of biotech cotton in textiles traded in all world markets is rising.

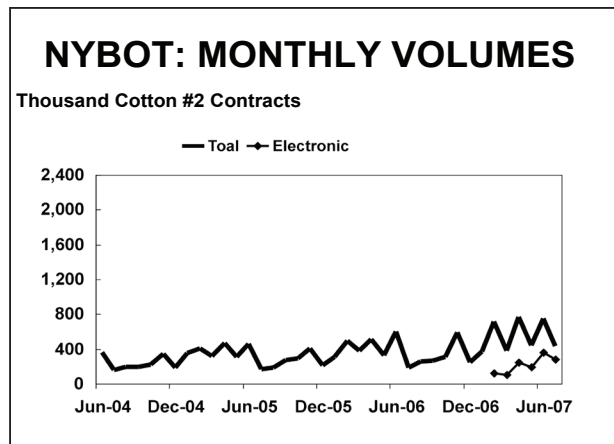

ELECTRONIC COTTON FUTURES TRADE TO PLAY A PROMINENT ROLE

NYBOT Merges with ICE and Launches Electronic Trading Platform

Electronic trading in cotton futures started to play a role in the cotton market in 2007. The New York Board of Trade (NYBOT), and the Intercontinental Exchange (ICE), the electronic energy marketplace, merged on January 12, 2007. The NYBOT is now a wholly-owned subsidiary of the ICE, which is a for-profit, publicly traded corporation. Starting February 2, 2007 side-by-side electronic trading of NYBOT commodities' contracts was launched on the ICE electronic trading platform. NYBOT contracts offered for electronic trading include cocoa, coffee, cotton, orange juice and sugar.

Contract specifications and commodity codes remain unchanged for both floor and electronic contracts, which are fungible with one another. The current Cotton No. 2 futures contract is for 50,000 pounds of Strict Low Middling grade with 1 1/16" staple length. The Contract is traded for five delivery months: March, May, July, October and December. The nearest ten delivery months are available for trade. NYBOT open outcry trading hours for cotton remain unchanged, 10:30 AM to 2:15 PM, Monday through Friday. Electronic trading in cotton is currently offered between 1:30 AM and 3:15 PM (Eastern Time). A pre-open market facility is available between 8:00 AM and 1:30 PM ET to allow participants to enter bids and offers that will be executed after the electronic market opens on a first-in first-out (FIFO) basis. There are no changes to the current NYBOT exchange fee structure, with floor and screen trades offered at existing, equivalent rates. There is one daily settlement price established for each futures contract month each trading day. Open positions are marked-to-market each day using the settlement price, regardless of whether the position was initiated via electronic or open outcry trading. The daily settlement price is determined at the close of the contract's open outcry trading session. Trading floor brokers are key providers of liquidity, have full access to the electronic system and can execute trades in the electronic system on behalf of their customers.

During February 2007, the first month of side-by-side trading of NYBOT open outcry and electronic trading of cotton futures, 713,894 cotton futures contracts were traded, including 120,503 contracts traded electronically, or 17% of the total. The volume of cotton futures contracts traded in February 2007 exceeded February 2006 volumes by 44%. A record number of 765,244 contracts were traded in April 2007, including 244,279 contracts traded electronically (32%). In July 2007, a total of 428,059 cotton futures contracts were traded, including 285,072 contracts traded electronically (65%).

Cotton Futures Volumes in China (Mainland) Lower in 2006

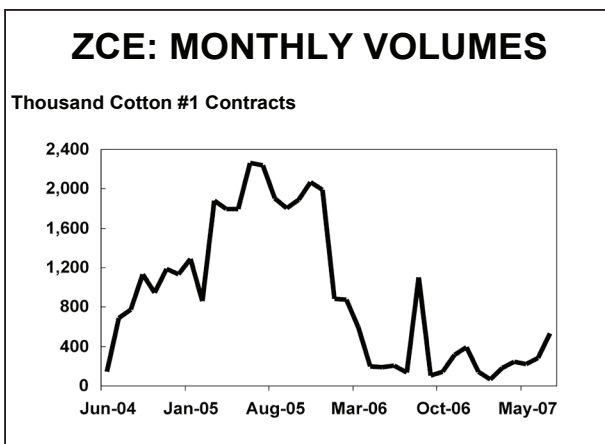

The Zhengzhou Commodity Exchange (ZCE) in China (Mainland) launched a new futures contract called Cotton # 1 Contract on June 1, 2004 and quickly achieved large volumes of contracts traded. The ZCE is one of three futures exchanges in China (Mainland). Wheat, sugar, cotton, rapeseed oil and pure terephthalic acid (PTA), used in the production of polyester, are the five major commodities currently traded at the exchange. There were more than fifty futures exchanges in operation in China (Mainland) during the first half of the 1990s, but their number was reduced by the government to fifteen in 1994, and then just to three in 1998. In addition to the ZCE, the Shanghai Futures Exchange and the Dalian Commodity Exchange are trading futures contracts in copper, aluminum, rubber, soybeans and soybean meal.

The Cotton # 1 Contract is 5 tons (about one-fifth of the size of the NY contract) for deliverable grade 328 at 13 approved exchange-appointed warehouses for saw ginned cotton, with 11 trading months; February is the only month excluded.

The major elements of success of the ZCE Cotton # 1 Contract lie in the integrity of the contract design making it easy to make and to take delivery of cotton with assured quality. China's Fiber Inspection Bureau tests cotton quality at the

warehouse entry point and at delivery. Widespread familiarity with futures obtained during the 1990s--when more than fifty futures exchanges were operating--and a large number of speculators helped to create large liquidity for cotton futures from the opening day of the # 1 Contract.

The contract proved very successful and attracted large volumes during the first year and a half of existence, exceeding at times volumes of cotton traded in New York. Between June 2004 and December 2005, a total of 27.7 million contracts, or 138.6 million tons, were traded at the ZCE. The average monthly volume traded during the period was 1.5 million contracts, or 7.5 million tons. Trading volume reached a daily record of 156,072 contracts traded on October 26, 2005, and open interest reached a record of 110,442 contracts on April 11, 2005. The largest monthly volume of Cotton Contract # 1 was 2.2 million contracts in July 2005, and during the second half of 2005 volumes were close to 2 million contracts a month.

However, cotton-trading volumes at ZCE declined sharply in 2006. Between January and December 2006, a total of 5.1 million cotton contracts, or 25.5 million tons, were traded, averaging 420,000 contracts or 2.1 million tons a month. The largest trading volume during 2006 was reached in August, when 1.1 million tons were traded, while the smallest monthly volume of 100,000 contracts was recorded in September 2006. During most of 2006, cotton prices in China (Mainland) were relatively stable. Coincidentally, a new sugar futures contract was introduced at the start of 2006. As a result, a large volume of speculative trading in 2006 shifted from cotton to sugar, causing sugar contract volumes to rise while cotton volumes declined four-fold compared with 2005. Speculators dominate the ZCE futures market. The share of hedgers is minimal, possibly because of the heavy reliance of market participants on support provided by the government, including funding by the government banks. During the first seven months of 2007, trading volumes in cotton futures at the ZCE declined further and totaled 1.7 million contracts, or 46% less than during the same period in 2006.

The ZCE has 222 members, including 27 that are state-owned. 179 members are futures brokerage firms, while 43 are non-futures-brokerage firms. All trading is done electronically with no open-outcry. Physical delivery in all contracts has not exceeded 0.5% of traded volume, very similar to delivery volumes at the exchange in New York. ZCE cotton prices are a factor in determining domestic prices for physical cotton in China (Mainland) and are taken into account by most of the mills when making purchasing decisions.

Cotton Futures Trade Volumes in India are Down

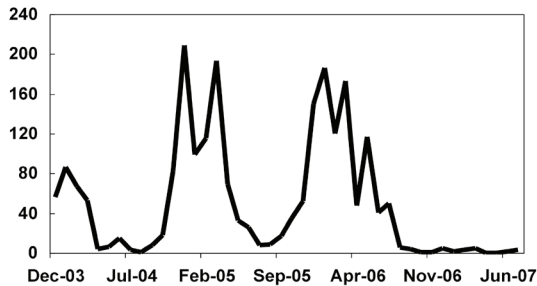

Efforts to promote futures trading are continuing in India, and futures contracts for cotton and many other commodities were introduced in the last five years at three commodity exchanges: the National Multi-Commodity Exchange (NMCE), Ahmedabad; the National Commodity & Derivatives Exchange (NCDEX), Mumbai; and the Multi Commodity Exchange (MCX), Mumbai.

During the last year cotton futures contracts were actively traded only at the National Commodity & Derivatives Exchange (NCDEX), one of the largest commodity exchanges in India offering 57 commodities, including 4 cotton contracts. The only active contract currently with the largest volume is Medium Staple Cotton, which started trading in October 2004. The contract size is 55 bales (9.35 tons). The total volume of all cotton contracts traded through August 2007 reached 2.2 million bales, or 370,700 tons. The largest cotton futures trade volume of 35,455 tons was reached in December 2004. Large volumes were also traded between December 2005 and July 2006, totaling 150,300 tons. Starting with August 2006, trading volumes declined substantially.

The Medium Staple Contract now covers all cotton traded as J 34 (SG) with a base staple length of 25.5 mm and a tenderable range of 24-27 mm and no premium above 27 mm. The delivery center is located at Abohar (Punjab), but delivery is also allowed at Sirsa (Haryana), Hanumangarh and Sriganganagar (Rajasthan). The hours of trading are Monday through Friday from 10:00 AM to 5:00 PM, and on Saturdays, 10:00 AM to 2:00 PM. Delivery months are January, February, March, May, July, August, October, November and December.

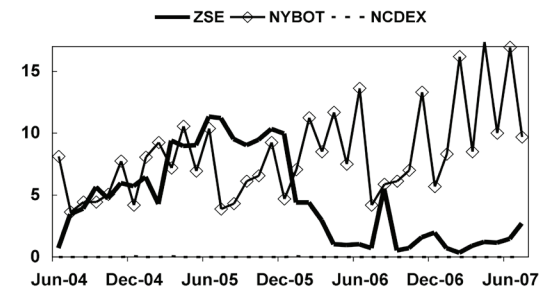

NCDEX: MONTHLY VOLUMES

Thousand Bales of 170 kg

MONTHLY VOLUMES

Million tons

There are currently 700 members of the exchange who can trade electronically at 858 terminals located at 553 exchange centers across India. Members can trade for their own account or for their clients' accounts. Major shareholders of the exchange are banking organizations. Information on prices, volumes, deliveries, contract specifications, rules and educational materials are provided on the exchange's web site. According to exchange data, more than 80% of contracts are closed by physical delivery. This means that there are few speculators participating in this market, and as a result a limited number of hedging operations exists at this exchange. Rather, participants use this market mostly as a trading platform, price discovery tool and physical forward contracting, and are not yet accustomed to hedging practices.

Cotton Futures Contract in Sao Paulo Still Attracts Small Volumes

The Bolsa de Mercadorias & Futuros (BM&F) in Sao Paulo, Brazil launched a cotton futures contract in 1996. Initially, the BM&F contract size was just 10,000 pounds, or one-fifth of the New York cotton futures contract. During the first year of existence, the contract was regularly traded on a daily basis. However, trading volume averaged just 58 contracts a day, an equivalent of about 290 tons of cotton. The BM&F cotton futures contract failed to attract significant interest and has not become a popular instrument for hedging and speculation in Sao Paulo. Contract volumes traded since 2000 remain small. In 2002, the BM&F cotton contract size was changed to 12.5 metric tons, or 27,558 pounds, roughly half the size of the New York cotton futures contract. During 2006, a total of 2,920 cotton contracts, or 36,500 tons of cotton, were traded at the BM&F, compared with 3,338 contracts or 41,725 tons traded during 2005. Daily volumes averaged 12 contracts or 150 tons during 2006, and 13 contracts or 163 tons in 2005. During the first seven months of 2007, trading volume of the BM&F cotton futures contracts totaled 687 contracts. One of the reasons the contract has not attracted sufficient volumes could be explained by direct competition from the NYBOT cotton futures market. The design of the BM&F is very similar to the NYBOT Cotton # 2 Contract. Cotton market participants operating in Brazil, as well as speculators, have access to both markets, in New York and in Sao Paulo, which is not the case in China (Mainland) or India.

BM&F: ANNUAL VOLUMES

Cotton Contracts

THE STRUCTURE OF WORLD TRADE

The current study of the structure of world cotton trade for 2006 indicates that the cotton shipping industry has become more concentrated over the last twelve years, but still remains highly competitive. During 2006 and the last six years, volumes traded by the largest companies rose the most. The Secretariat has studied the structure of world trade in cotton since 1994 and compiles a list of cotton-trading companies active as of the end of each year. Most of the firms are members of the 16 associations comprising the Committee for International Cooperation between Cotton Associations (CICCA). The latest list was compiled from six annual surveys mailed to all members of CICCA, from industry publications and from personal knowledge. The total number of responding companies from the six surveys is 103. The list of cotton trading companies consists of 470 firms engaged, at least in part, in international trade in cotton. Companies are divided into four categories by relative size. Organizations are also grouped by type of ownership: government, cooperative or private. The latest list of cotton trading organizations consists of 24 government organizations, 9 cooperatives and 437 private firms.

Largest

The most recent study based on volumes traded in 2006 indicates that there are 22 companies in the largest category (annual volume of more than 200,000 tons), three more than in 1994. In 2006, the largest companies handled 10.3 million tons, or 41% of world production. The volume handled by the largest companies in 2005 was 9.5 million tons, and in 2004 was 8.8 million tons. Since 2001, the volume handled by the largest companies rose by 34%, and since 1994 by 66%. Among the largest firms, 18 are non-governmental companies handling 9.3 million tons, or 37% of world production, 1 million tons more than in 2005 and 2.4 million tons more than in 2002. Compared with the 2001 survey, the cumulative volume handled by the largest companies, mostly in the USA, increased because of record exports of U.S. cotton, aided by rising import demand from China (Mainland). Eight of the world's largest cotton trading companies are based in the USA, three in Uzbekistan, three in Australia, two in Switzerland and one each in Belgium, Japan, France, Singapore and the UK.

Large

The number of large companies (annual volume of 50,000 tons to 200,000 tons) was at 50 in 2006, unchanged compared with 2005. The volume handled by the current group of large companies in 2006 rose by 400,000 tons to 4.3 million tons compared with 2005, and accounting for 17% of world production. Compared with 2001, volume traded by large companies in 2006 rose by 1.1 million tons. Indian and U.S. companies accounted for most of the increase during 2006. The composition of organizations defined as large companies has changed the most since 1994. The number of large government organizations declined from 15 to 4 as a result of privatization, mostly in Africa. The 1994 study indicated that there were 51 large cotton-trading companies handling 4.1 million tons, including 35 non-government owned large organizations accounting for 2.5 million tons, or 13% of world production. As of 2006, 46 private large companies were accounting for 3.9 million tons, or 15% of world production. The 64 largest and large non-government cotton trading companies account for 52% of world production, compared with 42% handled by 49 firms in the same categories in 1994.

Thirteen of the 50 large cotton traders are based in the USA. Five large firms are based in India; four in Italy and Australia; and three each in UK, France, Turkey and Switzerland.

Medium

There are currently 43 firms in the medium category (annual volume of 20,000 tons to 50,000 tons), two less than in 2005, with an estimated volume of 1.2 million tons. The volume traded by medium companies did not increase since 2001. In 1994, there were 50 companies with approximately the same combined volume. However, changes in individual firms comprising the group have occurred. Among the 43 medium sized companies, 9 are based in the USA and 4 in Switzerland.

Specialized

The most recent survey includes 354 firms in the category of specialized companies (annual volume of less than 20,000 tons) accounting for 1.8 million tons of combined volume in 2006, compared with 2 million tons in 2001. A large number of specialized cotton trading companies are based in the USA, Turkey, Poland, India, Switzerland, Germany, Egypt, Brazil and Italy. European companies accounted for most of the reduction in volume traded by medium and specialized companies during the past several years.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1984/85, Argentina reports exports to China (Taiwan) of 20,730 tons; China (Taiwan) reports imports from Argentina of 19,740 tons. Imports may differ from exports for a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

1/ Data on exports by Paraguay and Zimbabwe during 1984/85 are not available.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1985/86, Argentina reports exports to China (Taiwan) of 4,080 tons; China (Taiwan) reports imports from Argentina of 7,580 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1987/88, Argentina reports exports to China (Taiwan) of 5,700 tons; China (Taiwan) reports imports from Argentina of 16,610 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

1988/89 WORLD COTTON TRADE MATRIX*

[illegible]

TTThe top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1988/89, Argentina reports exports to China (Taiwan) of 13,640 tons; China (Taiwan) reports imports from Argentina of 8,880 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1989/90, Argentina reports exports to China (Taiwan) of 10,400 tons; China (Taiwan) reports imports from Argentina of 10,000 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1994/95, Australia reports exports to Japan of 89,000 tons; Japan reports imports from Australia of 90,110 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1999/00, Australia reports exports to Japan of 136,400 tons; Japan reports imports from Australia of 131,250 tons. Imports may differ from exports in a given season because of time spent in transit; changes in the weight of cotton during shipment; transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2004/05, Australia reports exports to Japan of 43,770 tons; Japan reports imports from Australia of 44,350 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.
