DEVELOPMENTS IN WORLD COTTON TRADE

World cotton trade experienced a most volatile market during 2010/11, characterized by panic buying, sharp swings in prices, multiple daily price limit ups or downs at the exchange, record prices and end-season erosion of demand caused by sky-high prices. Despite all the hyper activity, world trade did not rise during 2010/11, and stayed at 7.8 million tons. However, the number of defaults by buyers and sellers seem to have reached new highs, causing multi-size losses. World cotton imports are projected to grow 4% during 2011/12 to 8 million tons, driven by a projected recovery in mill use and imports by China, Bangladesh, Indonesia and Vietnam. World cotton trade reached a record of 9.5 million tons in 2005/06.

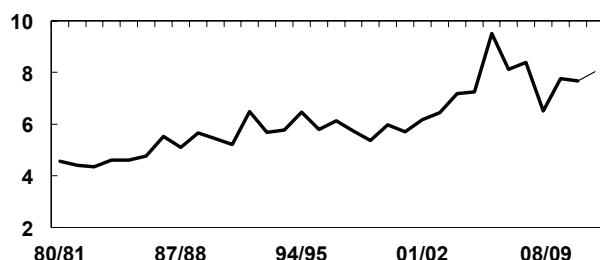

China, Bangladesh, Turkey, Indonesia, Thailand and Vietnam are projected to remain the largest cotton importers in 2011/12, accounting for 75% of the world total, up from 68% in 2010/11. China will account for most of the increase in imports.

Brazil and Australia are projected to increase exports the most during 2011/12, because of a sharp increase in production. Uzbekistan Greece, CFA zone and East Africa are also expected to export more cotton in in 2011/12. Exports from USA and India are expected to decline during 2011/12, because of lower production in the USA and rising mill use in India.

World imports as a share of world cotton mill use averaged 31% between 1998/99 and 2008/09, reaching a record of 38% in 2005/06 and declined below 32% during the following five seasons. Rising trade are projected to raise the ratio to 32% during 2011/12. World exports as a share of world cotton production averaged 31.5% between 1998/99 and 2008/09, also reaching a record of 38% in 2005/06 and declining to 28% in 2008/09. The export/production ratio rose to 35% during 2009/10, reflecting a gap between mill use and production; the ratio is projected at 30% in 2011/12, as production is expected to rise in response to higher prices. The shares of trade to production and mill use have fluctuated since 1980/81 in a range between 27 and 38 percent.

WORLD COTTON EXPORTS

Percent of Production

Substantial changes in cotton trade flows occurred during the past decade. Industrial countries (North America, Western Europe, Australia and Japan) accounted for 21% of world mill use, 29% of world imports, and 36% of world exports in 1998/99. The decline in mill use in industrial countries, and the rapid expansion in Asia, led to a major shift in the destination of world imports. It is projected that in 2011/12, industrial countries will account for 4% of mill use, 3% of world cotton imports and 48% of world exports. The share of industrial countries in world exports remains high due to large shipments from USA.

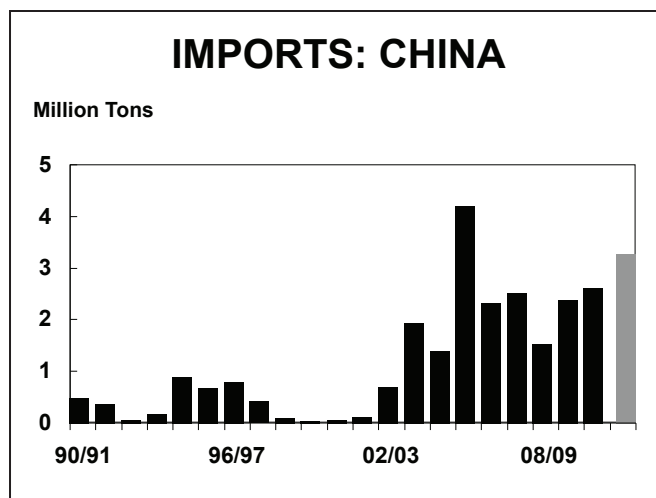

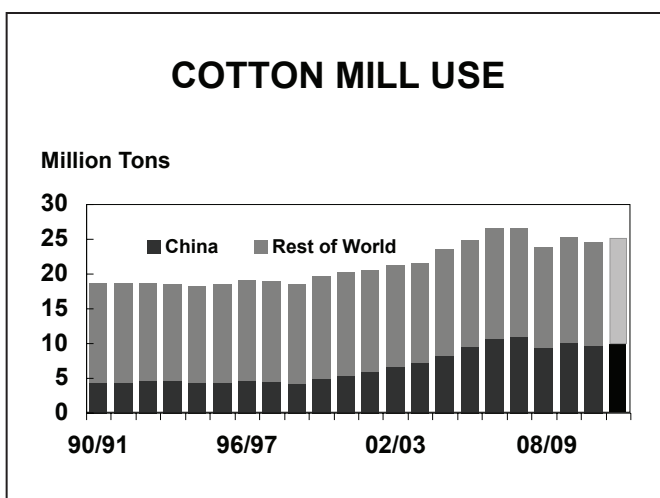

Asia became the primary destination for cotton shipments during the past decade. In 1998/99, Asia accounted for 58% of world mill use, 47% of world imports and 4% of world exports. It is projected that Asia will account for 78% of world mill use, 78% of world imports and 12% of world exports in 2011/12. In contrast, Africa's share of world mill use and exports declined during the last decade. In 1998/99, Africa accounted for 3% of world imports and consumption and 23% of world exports. It is projected that in 2011/12, Africa will account for 2% of world mill use, 2% of imports and 13% of world exports.

South America accounted for 6% of world mill use, 8% of world imports and 6% of world exports in 1998/99 and is projected to account for 6% of mill use, for 2% of world imports and 13% of world exports in 2011/12. Compared with 1998/99, cotton production in South America is projected to almost triple in 2011/12, as a result of the expansion in Brazil that started in 2003/04. During the past decade, mill use in South America rose by a quarter.

Purchases by China Lead World Trade Higher

Cotton mill use in China is projected to recover during 2011/12, leading to larger imports. It is projected that imports by China could grow by almost a quarter to 3.3 million tons.

China maintains significant strategic reserves of cotton. China releases cotton to the market through a system of auctions when there is a shortage; the government replenishes the reserves when there is an abundance of supplies and prices are reasonably

low. During 2010/11, the government released 1 million tons from the reserves to ease acute shortages in the domestic market. Release of the reserves to domestic mills reduced the need for imports and limited growth in world trade. It has been announced that China will start buying cotton to replenish the strategic reserve during 2011/12, at 19,800 yuan per ton of lint (139 cents per pound as of mid-July 2011). As of mid-July 2011, the China Cotton Index for grade 328 was close to 23,000 yuan per ton (161 cents per pound).

In 2011, a total of 2.594 million tons of import quotas were released, including 894,000 tons of Tariff Rate Quota (TRQ). The minimum effective duty for imported cotton from all origins in 2011 is 1% and the maximum is 2%, because market prices remain high. It is estimated, that about 1 million tons of import quota remain unused as of the beginning of 2011/12, because of shortages of cotton from suppliers and reduced demand from textile mills.

During 2010/11, USA surpassed India as the largest supplier of cotton to China, because of the Indian limitations on exports. It is estimated that USA accounted for about 45% of imports by China, India for about 27% and Uzbekistan for about 8%. In 2011/12, China is projected to account for 40% of world imports.

The number of defaults by cotton suppliers to China increased sharply in 2010/11 according to industry sources, because of a record volatility in cotton prices. Overseas suppliers defaulted on delivery of lower priced cotton when prices soared to records during 2010/11. The China Cotton Association (CCA) started investigating defaults in March 2011. Defaults were not a feature of just Chinese market, but were widespread during 2010/11 in many other markets, such as USA, India, Tanzania. During the second half of the season prices declined and mills were defaulting on higher priced contracts. Defaults caused substantial losses among buyers and suppliers of cotton during 2010/11. Some of the contracts were renegotiated, but a large number went into arbitration.

Indian Exports Curbed

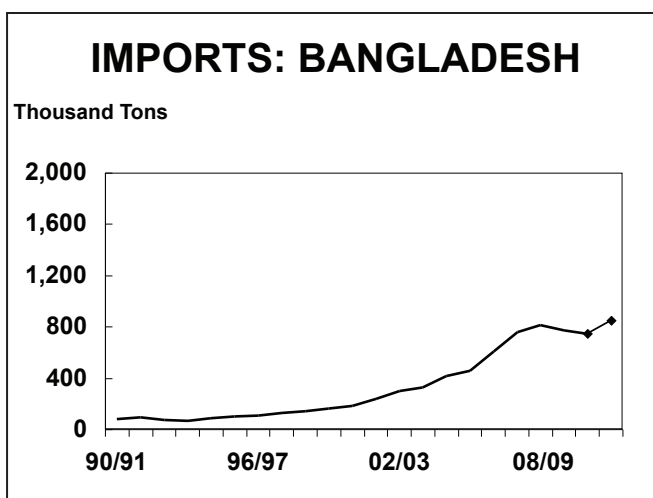

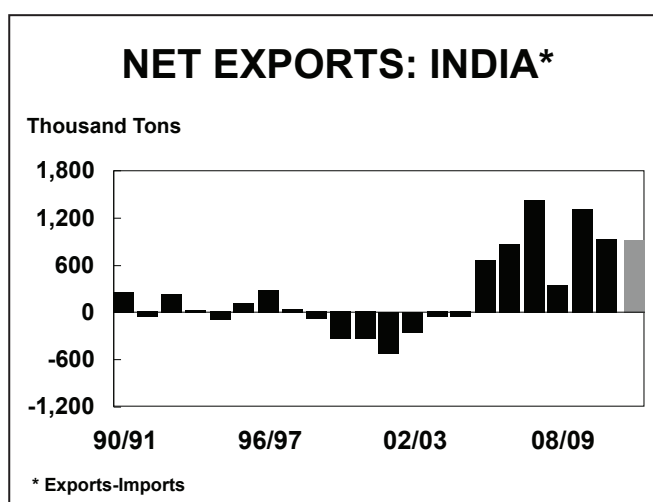

In 2010/11, the Indian government restricted exports of cotton to about 1.1 million tons. The projected record crop in India and a slower growth in mill use will allow India to release for exports at least the same quantity for exports in 2011/12. As of mid-July 2011 export policy for 2011/12 had not been announced yet. India will remain the world's second largest exporter. India emerged as one of the largest cotton exporters in 2005/06, and by 2007/08 India was the second largest exporter with shipments reaching a record 1.5 million tons (18% of world exports).

In India, favorable growing conditions, a low incidence of pests and diseases, increased planting of new higher yielding varieties and Bt cotton, improved crop management practices, increased cotton demand and relatively higher market prices resulted in improved yields, quality and increased area during the past several seasons.

More than half of Indian exports in 2010/11 went to China. Bangladesh, Pakistan, Vietnam and other East Asia are other major destinations for Indian cotton. India was an importer of about 100,000 tons of mostly extra-fine and fine cotton varieties from the USA and Egypt in 2010/11.

Imports by Bangladesh Resume Growth

In 2011/12, imports by Bangladesh are projected to increase by 100,000 tons to reach 850,000 tons, the second largest imports after China. The robust expansion of weaving and spinning in Bangladesh during the past decade slowed during 2010/11 due to shortages of cotton, high prices and power shortages. In 2010/11, cotton imports by Bangladesh accounted for 10% of world trade. Uzbekistan and India were the major suppliers of cotton to Bangladesh in 2010/11 accounting for one-third of imports each. Other Central Asian countries and Africa account

for most of the rest of Bangladesh imports. Uzbek and Indian cottons have the largest market share in Bangladesh because of price competitiveness, short delivery times, and quality characteristics preferred by spinners. However, cotton from Turkmenistan and the USA gained market share during the past several seasons.

Imports by Turkey Decline

Cotton production in Turkey is projected to increase sharply in 2011/12 in response to high prices. As a result, imports are projected to decline by 9% to 680,000 tons, accounting for 8% of world imports and the third largest in the world. Cotton production declined during the preceding seven seasons as a result of shifts in area to competing crops and appreciation of the Turkish lira in relation to the U.S. dollar. Higher cotton prices are expected to arrest the trend during 2011/12, while cotton mill use is expected to stabilize. In 2010/11, about 70% of Turkish imports originated in the USA, while the rest were imported from Greece, Central Asia, Brazil and India. The high share of U.S. cotton in Turkish imports is explained by the importance of GSM-102 credit guarantees, actively used by Turkish buyers. In 2010/11 about \$270 million were used by Turkish importers or three-quarters of the usage under the program. Long-term credit (up to 3 years) and complete terms of the credit fit well with Turkish banks and importers. Cotton Council International (CCI) and Cotton Incorporated (CI) of the USA run active marketing and promotional campaigns in Turkey.

Mill Use in Vietnam Expands

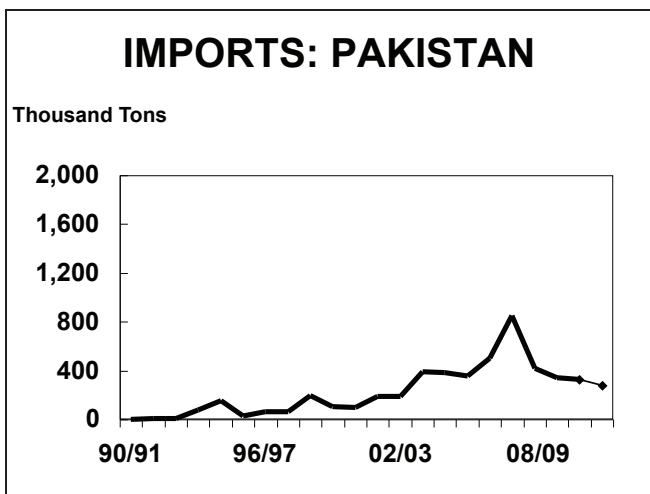

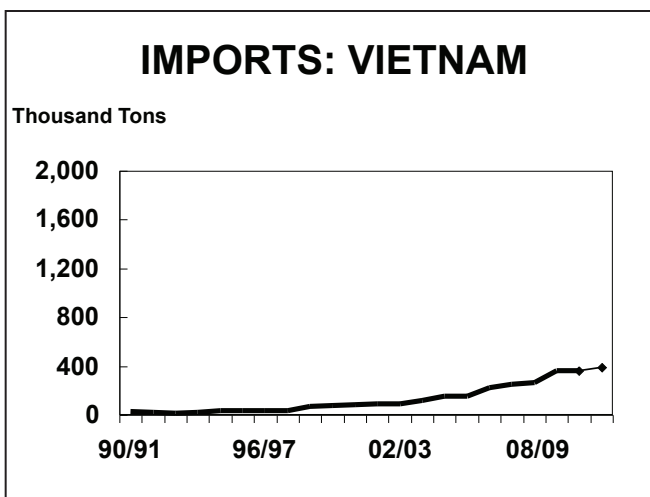

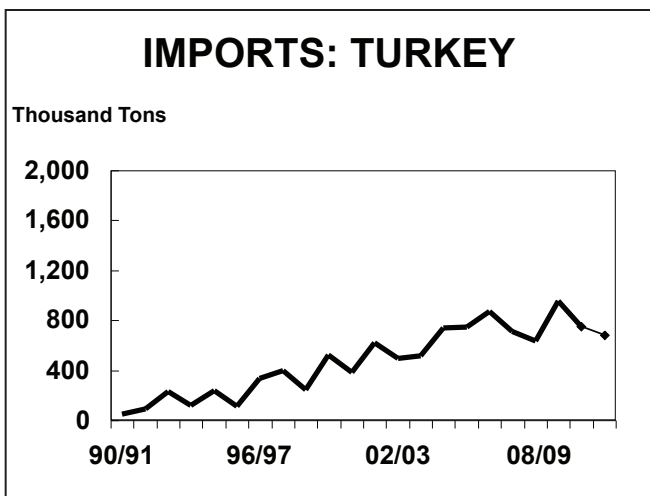

The textile industry in Vietnam continues to expand rapidly causing import demand for cotton to grow significantly. It is projected that mill use and imports by Vietnam could increase by 6% during 2011/12 to reach 385,000 tons. Vietnam will account for 5% of world imports and will be among the world's top importers including Indonesia and Thailand. USA supplies about 50% of imports by Vietnam, while India and African countries supply most of the rest.

Smaller Imports by Pakistan are Expected

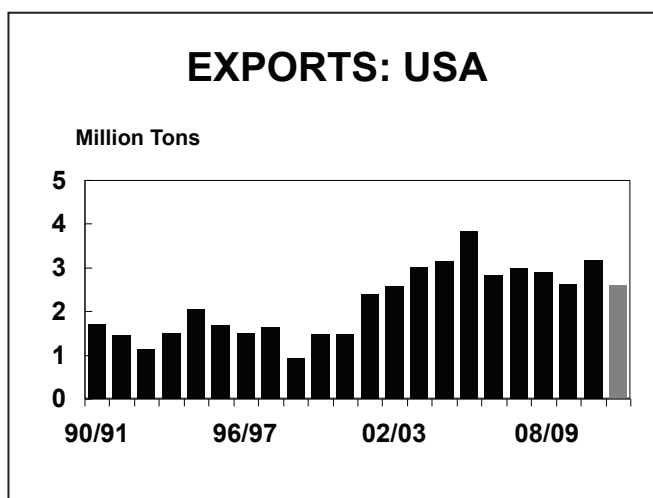

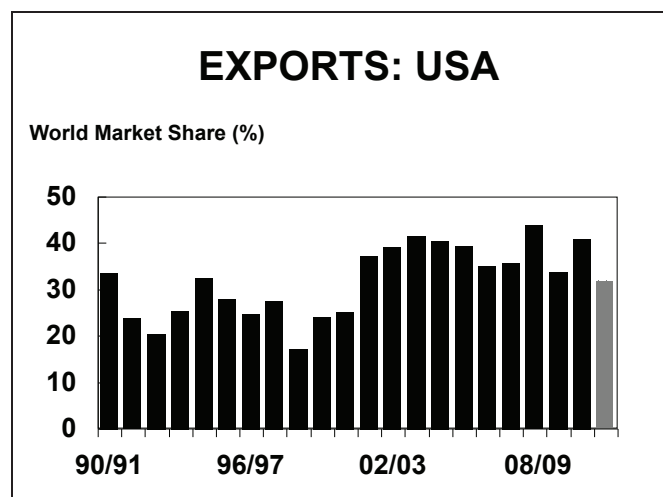

In 2011/12, production in Pakistan is projected to rebound by 14%. As a result, imports are projected to decline by 15% to 280,000 tons, accounting for 13% of Pakistan's mill use. Pakistan remains one of the largest buyers of extra-fine (U.S. Pima) and fine cotton (California Acala with staple length 35.9 mm and longer) from the USA and Egypt for higher count yarns. Cotton consumption in Pakistan has expanded since 1998/99 in response to export-driven demand for textiles. In 2011/12, cotton mill use in Pakistan is projected to resume growth, after declines caused by the shortages of cotton and high fiber prices. India, USA, Brazil, and Uzbekistan are the major suppliers of cotton to Pakistan.

Exports from the USA Could Decline

U.S. cotton production is projected to decline by more than 12% during 2011/12 to 3.5 million tons because of unfavorable

weather. As a result of declining supplies, U.S. exports are projected to fall by 17% to 2.6 million tons in 2011/12, accounting for 32% of world exports, down from 41% in 2010/11. Declining production during the past several seasons with small reductions in exports led to relatively low stocks in the USA. It is estimated that China accounted for an estimated one-third of U.S. shipments during 2010/11. Other countries in Asia accounted for another one-third of U.S. exports. Large shipments were made to Indonesia, Thailand, Taiwan, Pakistan, Bangladesh, Vietnam and Korea. Turkey remained the second largest destination for U.S. cotton in 2010/11, accounting for 15% of exports, while Mexico remained the third largest destination during the past season, accounting for about 10% of U.S. shipments.

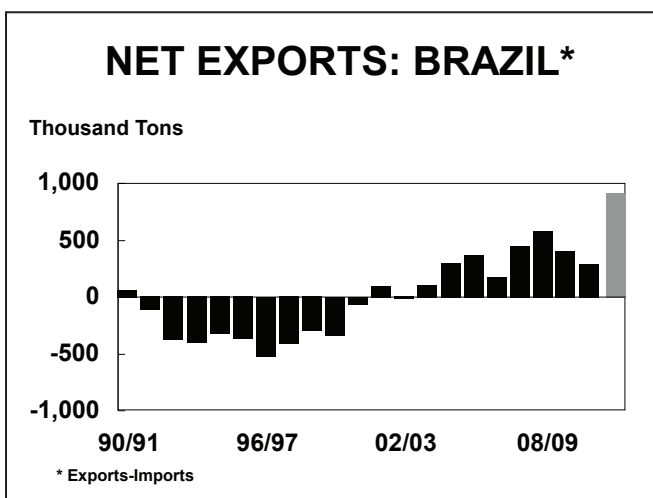

Record Exports from Brazil are Expected

Brazilian cotton production is projected to reach a record of 2.2 million tons in 2011/12 in response to record prices. As a result Brazilian exports could more than double and reach a record 925,000 tons, making Brazil the world's third largest exporter after the USA and India, accounting 11% of world exports. During the past several seasons, the government of Brazil provided marketing assistance to producers improving competitiveness of Brazilian cotton, both in domestic and international markets. Indonesia, China, Korea and Pakistan are major buyers of Brazilian cotton. China accounts for 10% of Brazilian exports.

Exports from Australia and the CFA Zone Increase

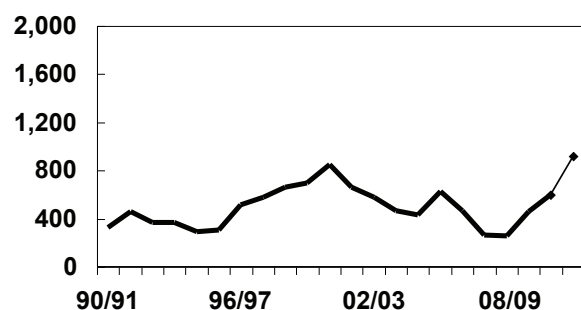

Greatly improved water availability and record prices caused Australian production to reach a record 1.1 million tons in 2010/11. Exports are projected to rise into record territory exceeding 800,000 tons in 2011/12, accounting for 10% of world trade. China accounted for an estimated 60% of exports from Australia in 2010/11. Indonesia and other countries in East Asia are other major destinations for Australian cotton.

CFA zone cotton production is projected to recover by more than one-third during 2011/12 to 700,000 tons as a result of higher prices received by farmers during 2010/11. CFA zone production declined during the past several seasons after reaching a record of 1.1 million tons in 2004/05, mostly because of lower market prices and the appreciation of the CFA franc during the period, which is pegged to the euro, leading to a further decline in prices received by producers. In 2011/12, exports from the CFA zone are projected to increase by 15% to reach 560,000 tons. China became the largest destination for exports from the CFA zone during the past several seasons, accounting for about half of all shipments. Other countries in East Asia remain important destinations for West African cotton.

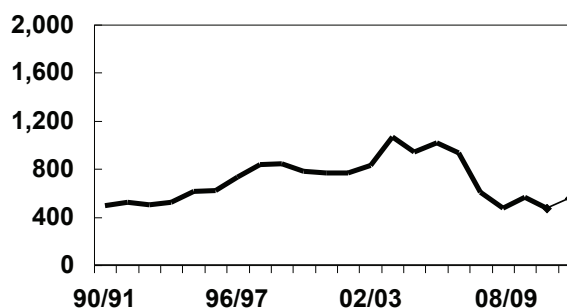

EXPORTS: AUSTRALIA

Thousand Tons

EXPORTS: CFA ZONE

Thousand Tons

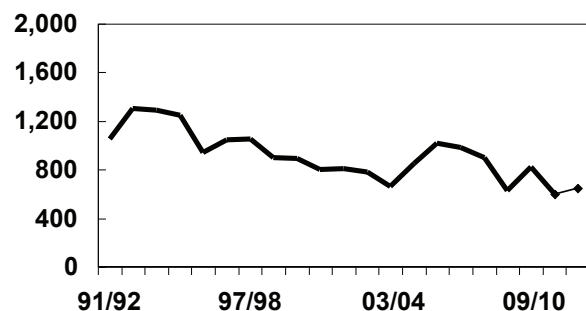

Larger Exports from Uzbekistan are Projected

Production in Uzbekistan is projected to increase moderately to about 1 million tons. A larger supply will be available for exports, which could rise by 8% to 650,000 tons. Bangladesh, China and Russia are major destinations for cotton from Uzbekistan.

Uzbek cotton is traditionally quoted at a premium to the Cotlook A Index. Between 2003/04 and 2009/10, the premium averaged 3%. In 2003/04 the premium was 4% and gradually declined to 1% by 2006/07. During this period, cotton production in Uzbekistan climbed from 900,000 tons to 1.2 million tons. In 2007/08, the premium for Uzbek cotton rose to 2% and jumped to 6% in 2008/09. During 2009/10, the premium averaged 4%, staying above the long-term average, and increased to 5% during 2010/11. Between 2007/08 and 2009/10, cotton production in Uzbekistan declined from 1.2 million tons to 650,000 tons. The variability in the premium for Uzbek cotton seems to be explained by changes in its supply.

Larger World Extra-fine Supplies are Expected in 2011/12

World extra-fine cotton production is projected to grow by 20% to 590,000 tons during 2011/12 in response to record prices received in 2010/11. This will be the second season with strong production growth and tight stocks. Most of the increase will be accounted for by Egypt, USA and China. Production is also expected to grow in Sudan, India and Israel. Consumption of extra-fine cotton in producing countries declined sharply during 2010/11 as a result of limited supplies, but is projected to rebound by 6% during 2011/12. Larger projected supplies are expected to allow larger exports, projected to grow by 6% to 280,000 tons. The USA, Egypt and Israel are expected to account for most of the projected increase in exports.

EXPORTS: EXTRA-FINE COTTON

Thousand Tons

Share of Biotech Cotton in Trade is Rising

Biotech cotton production and trade continue to expand. Based on officially reported data, biotech cotton accounted for 20% of world area, 28% of world production and 33% of world exports in 2002/03. In 2010/11, it is estimated that biotech cotton accounted for 64% of world area and production, and 63% of exports. World exports of biotech cotton are estimated based on production shares in exporting countries. The largest exporters of biotech cotton are the USA, India and Australia.

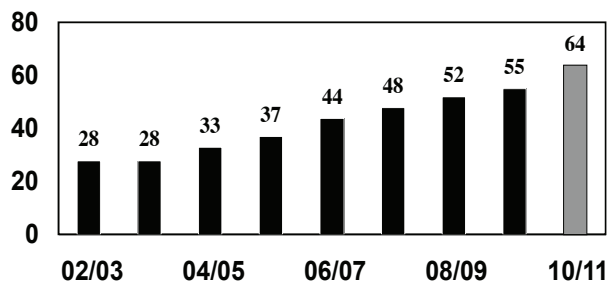

It is evident that the share of biotech cotton in textiles traded in all markets is rising and is nearing two-thirds of production. There are no price differentials for biotech and non-biotech cotton fiber or textiles containing biotech cotton. There is no evidence of rejection or price discrimination against biotech cotton, nor evidence of price premiums for non-biotech cotton, by any segment of the market or region. In practice, markets do

not identify biotech cotton content, but rather evaluate cotton properties based on quality characteristics.

For example, a comparison of long-term price ratios of medium grades of U.S. Memphis/Orleans/Texas and Benin Bela quotes to the Cotlook A Index indicates that most of the time, U.S. cotton (biotech) enjoys an equal or higher premium to the A Index compared with cotton from Benin (non-biotech). Although other factors, such as contamination or a lack of HVI data may limit the premium for Benin cotton, U.S. cotton is not sold at a discount. It also seems that the introduction of biotech cotton in

Burkina Faso in 2008/09 did not lead to reduced premiums. Premiums paid for Indian cotton rose during the past two seasons, even though close to 90% of Indian cotton is biotech.

Efforts to Harmonize Phytosanitary Certificates for Trade in Cotton

The Private Sector Advisory Panel (PSAP) asked the Secretariat to gather information on phytosanitary requirements for cotton in major importing countries in an effort to standardize requirements. The Secretariat gathered information for 35 countries and produced a report on phytosanitary requirements, including major importers. The report indicates that there is a wide variance in phytosanitary documentation from country to country.

International standards for phytosanitary measures (ISPMs) were prepared by the Secretariat of the International Plant Protection Convention (IPPC) as part of the United Nations Food and Agriculture Organization's (FAO) global program of policy and technical assistance in plant quarantine. The ISPMs describe specific and detailed principles and guidelines for preparation and issuance of phytosanitary certificates, including a model phytosanitary certificate. The aim is to facilitate trade and avoid the use of unjustifiable measures as barriers to trade. According to the IPPC, model certificates provide a standard wording and format that should be followed for the preparation of official phytosanitary certificates. Electronic certification may be used if acceptable by importing countries.

The Secretariat recommended that ICAC members be aware of the international standards for phytosanitary measures and the model phytosanitary certificate (ISPM # 12) by the FAO in order to achieve harmonization of phytosanitary measures for trade in cotton. The Secretariat asked Standing Committee members to distribute the international standards for phytosanitary measures and a model phytosanitary certificate to their appropriate government agencies. At a future Standing Committee meeting, members will be asked to approve a recommendation that governments adopt the international standards for phytosanitary measures and a model phytosanitary certificate by FAO for trade in cotton.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1984/85, Argentina reports exports to China (Taiwan) of 20,730 tons; China (Taiwan) reports imports from Argentina of 19,740 tons. Imports may differ from exports for a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

1/ Data on exports by Paraguay and Zimbabwe during 1984/85 are not available.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1989/90, Argentina reports exports to China (Taiwan) of 10,400 tons; China (Taiwan) reports imports from Argentina of 10,000 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1994/95, Australia reports exports to Japan of 89,000 tons; Japan reports imports from Australia of 90,110 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2000/01, Australia reports exports to Japan of 140,320 tons; Japan reports imports from Australia of 135,650 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2005/06, Australia reports exports to Japan of 34 030 tons; Japan reports imports from Australia of 33,740 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.
