DEVELOPMENTS IN WORLD COTTON TRADE

World cotton trade is projected to drop by 20% to 7.5 million tons in 2012/13, despite projected lower prices and a moderate improvement in mill use. In an effort to build national strategic reserves, China boosted imports of cotton to a record 5.2 million tons during 2011/12 accounting for 56% of world trade. World trade is estimated at 9.3 million tons in 2011/12, the second highest seasonal total after the record 9.6 million recorded in 2005/06. It is projected that China will drastically reduce imports during 2012/13 to 2.6 million tons after accumulating stocks equal to 70% of annual mill use. Imports by countries other than China could grow by 17% to 4.8 million tons, driven by lower cotton prices and a slightly higher level of consumption.

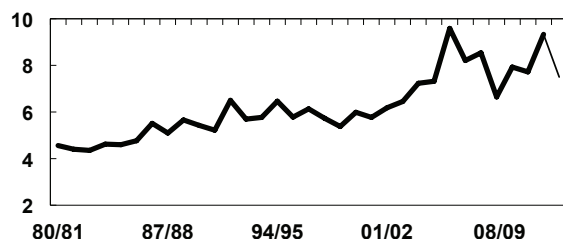

Purchases by the Chinese government helped to support world prices during 2011/12, and price volatility was close to the long-term average. However, cotton trade continues to experience the consequences of very high volatility during 2010/11, characterized by an exploding number of contract defaults by buyers and sellers, causing multi-size losses. The number of disputes and arbitration cases continues to grow, and much time and resources are spent in an effort to settle those.

Projected moderate improvement in demand during 2012/13 will lead to higher imports by consuming countries, but this growth will not offset the projected sharp drop in imports by China. China, Bangladesh, Turkey, Indonesia, Vietnam and Thailand will remain the world largest importers in 2012/13, accounting for 71% of world trade (down from 80% in 2011/12).

USA, Australia, India, Brazil, Uzbekistan and Francophone Africa will remain the largest exporters during 2012/13, accounting for 79% for world exports (down from 82% in 2011/12). Exports by USA and Francophone Africa are projected to increase moderately during 2012/13 due to increased production. Exports by other major exporters are projected to decline because of reduced production and smaller imports by China.

WORLD COTTON IMPORTS

Million Tons

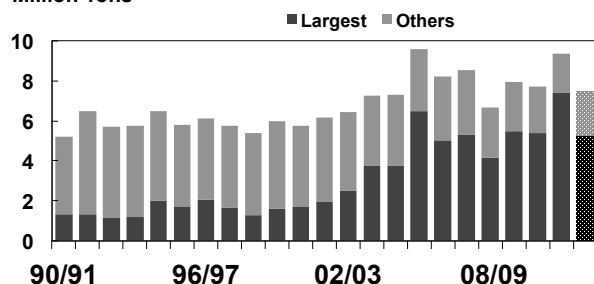

World imports as a share of world cotton mill use averaged 32% during the ten seasons between 2001/02 and 2010/11. In 2011/12, the share rose to a record 41% because of imports by China to build the national reserve. It is projected, that world imports will decline to 32% of world mill use again in 2012/13. World exports as a share of world cotton production also averaged 32% between 2001/02 and 2010/11, and reached 34% in 2011/12. The shares of trade to production and mill use have fluctuated since 1980/81 in a range between 27 and 41 percent and previously peaked at 38% in 2005/06, a season of record trade.

Substantial changes in cotton trade flows occurred during the past fifteen seasons. Industrial countries (North America, Western Europe, Australia and Japan) accounted for 21% of world mill use, 29% of world imports, and 36% of world exports in 1998/99. The decline in mill use in industrial countries, and the

WORLD IMPORTS

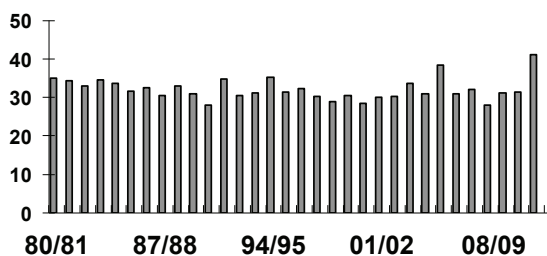

Million Tons

*North America, Western Europe, Australia and Japan

rapid expansion in Asia, led to a major shift in the destination of world imports. It is projected that in 2012/13, industrial countries will account for 4% of mill use, 3% of world cotton imports and 50% of world exports. The share of industrial countries in world exports remains high due to large shipments from USA and Australia.

Asia became the primary destination for cotton shipments during the past decade. In 1998/99, Asia accounted for 58% of world mill use, 47% of world imports and 4% of world exports. It is projected that Asia will account for 78% of world mill use, 77% of world imports and 13% of world exports in 2012/13. In contrast, Africa's share of world mill use and exports declined during the last decade. In 1998/99, Africa accounted for 3% of world imports and consumption and 23% of world exports. It is projected that in 2012/13, Africa will account for 1.4% of world mill use, 3% of imports and 16% of world exports.

South America accounted for 6% of world mill use, 8% of world imports and 6% of world exports in 1998/99 and is projected to account for 5% of mill use, for 2% of world imports and 9% of world exports in 2012/13. Compared with 1998/99, cotton production in South America is projected to more than double in 2012/13, as a result of the expansion in Brazil that started in 2003/04. During the past fifteen seasons, mill use in South America rose by 11%.

Rebuilding China National Reserve Boosts World Trade

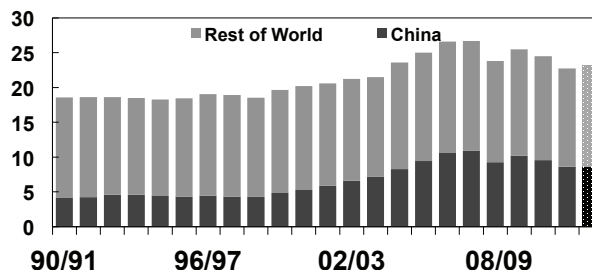

Cotton imports by China are projected to drop by half during 2012/13 to 2.6 million tons, assuming that government efforts to build the national reserve through imports will not continue beyond 2011/12.

China maintains significant strategic reserves of cotton serving as a national buffer stock. China releases cotton to the market through a system of auctions when there is a shortage; the government replenishes the reserve when there is an abundance of supplies and prices are considered low. During 2010/11, the government released 1 million tons from the reserve to ease acute shortages in the domestic market. The release of reserve cotton to domestic mills reduced the need for imports and limited growth in world trade.

In 2011/12, China decided to rebuild the national reserve and implemented a minimum cotton support price. In 2011/12 the

COTTON MILL USE

Million Tons

China National Cotton Reserve Corporation (CNCRC) purchased 3.1 million tons of domestic cotton and an estimated one million tons of imported cotton between September 2011 and March 2012 for the national reserve. These purchases boosted domestic prices and imports by domestic mills. The minimum support price for 2011/12 was set at 19,800 yuan per ton of lint (150 cents per pound as of early August 2011).

China continues border protection measures controlling cotton import volumes and values. A TRQ of 1% for 894,000 tons was released for calendar year 2012. At the same time, the government opened an additional TRQ of 1.1 million tons under a sliding scale duty going from 5% to 40%. The threshold below which the sliding scale duty takes effect was raised from 11,397 yuan per ton to 14,000 yuan per ton.¹ Above the threshold, a fixed rate of duty of 570 yuan per ton² applies. In May 2012, an additional TRQ of 1 million tons was opened.

As a result of the rebuilding of the national reserve, China held the largest share of global stocks of any country, with China's stocks estimated at 44% of world stocks at the end of 2011/12. For 2012/13, the government procurement price was increased to 20,400 yuan per ton³ and is expected to buy a portion of the new cotton crop. This suggests that the size of the national cotton reserve may increase further in 2012/13.

For the second time, India was the largest supplier of cotton to China in 2011/12, accounting for 37% of imports by China. It is estimated that USA accounted for about 25% of imports by China; Australia for about 12%; Brazil for 7%; and Uzbekistan for about 5%. In 2012/13, U.S. cotton share in Chinese imports is projected to increase.

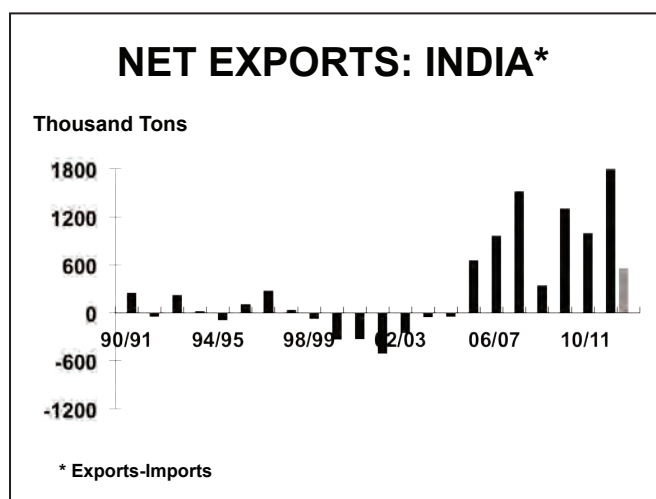

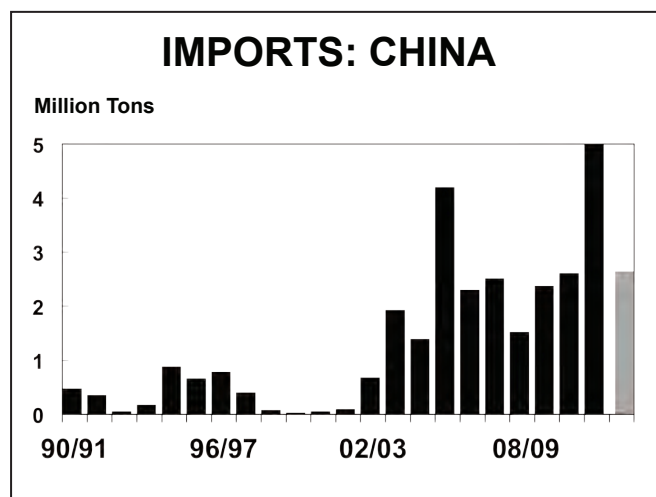

Record Indian Exports

On March 5, 2012, the Indian government announced a ban on new exports of cotton, fearing that the country's supply could be short of domestic mill's needs. In fact India produced a record crop while domestic mill use weakened. The ban was completely lifted on April 30, 2012. As a result, Indian exports in 2011/12 are estimated at a record 2 million tons. India was the world's second largest exporter of cotton in 2011/12 behind USA, accounting for 22% of world exports. India emerged as one of the largest cotton exporters in 2005/06, with increased domestic production.

In India, favorable growing conditions, a low incidence of pests and diseases, increased planting of new higher yielding varieties and Bt cotton, improved crop management practices, increased cotton demand and relatively higher market prices resulted in improved yields, quality and increased area during the past several seasons.

An estimated 75% of Indian exports in 2011/12 went to China. Bangladesh, Pakistan, Vietnam and other East Asia are other major destinations for Indian cotton. India was a large importer of extra-fine and fine cotton varieties from the USA and Egypt in 2011/12.

In 2012/13, it is expected that Indian exports will fall to below 700,000 tons because of projected smaller supply and weaker import demand from China. An increase of 29% in the minimum support price in India for medium staple cotton for 2012/13 to Rs. 3,600 per 100 kg of seed cotton, equivalent to 84 cents per pound of lint at the exchange rate as of end of July 2012, could result in large purchases of domestic cotton by the government Cotton Corporation of India (CCI) during 2012/13.

1) \$1.00 per pound at the exchange rate of end-July, 2012.

2) 4 cents per pound at the exchange rate of end-July, 2012.

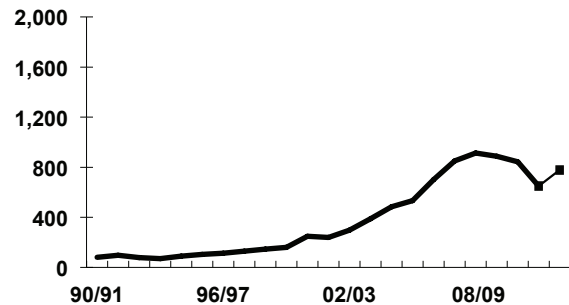

3) \$1.45 per pound at the exchange rate of end-July, 2012.

Imports by Bangladesh Resume Growth

In 2012/13, imports by Bangladesh are projected to rebound by 130,000 tons to reach 780,000 tons, the second largest imports after China. The robust expansion of weaving and spinning in Bangladesh during the past decade slowed during 2011/12, and cotton imports declined substantially due to high cotton prices, disruptions caused by the Indian ban, rising imports of yarn and widespread defaults on cotton contracts. In 2012/13 market conditions are projected to stabilize and cotton imports by Bangladesh are expected to account for 10% of world trade. Uzbekistan and India were the major suppliers of cotton to Bangladesh in 2011/12 accounting for one-third and one-fifth of imports respectively. Other Central Asian countries and Africa accounted for most of the rest of Bangladesh imports. Uzbek and Indian cottons have the largest market share in Bangladesh because of price competitiveness, short delivery times, and quality characteristics preferred by spinners. However, cotton from Turkmenistan and the USA gained market share during the past several seasons.

IMPORTS: BANGLADESH

Thousand Tons

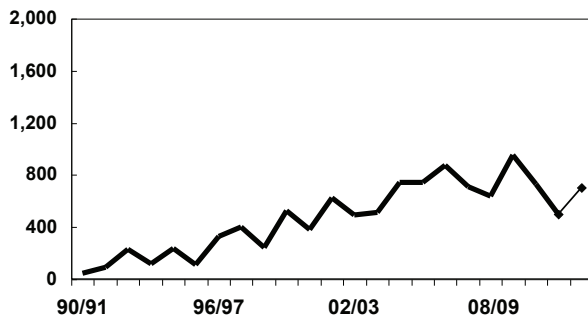

Imports by Turkey Could Rise

Cotton imports by Turkey are projected to rebound during 2012/13 by 150,000 tons to over 700,000 tons, while cotton mill use is expected to stabilize. Turkey will remain the world's third largest importer accounting for 9% of world trade. Cotton

production in Turkey increased sharply in 2011/12 in response to high prices leading to a sharp decline in imports. High cotton prices were another reason for the decline in imports. In 2011/12, an estimated 60% of Turkish imports originated in the USA, while the rest were imported from Greece, Central Asia, Brazil and India. The high share of U.S. cotton in Turkish imports is explained by the importance of GSM-102 credit guarantees, actively used by Turkish buyers. In fiscal year 2011 about \$291 million were used by Turkish importers for cotton, and the first allotment of fiscal year 2012 was \$111 million. Long-term credit (up to 3 years) and complete terms of the credit fit well with Turkish banks and importers. Cotton Council International (CCI) and Cotton Incorporated (CI) of the USA run active marketing and promotional campaigns in Turkey.

IMPORTS: TURKEY

Thousand Tons

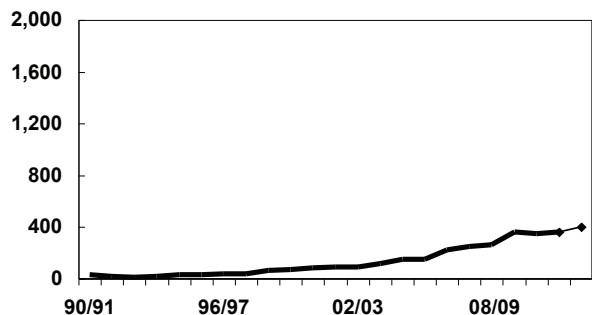

Mill Use in Vietnam Continues Expanding

The textile industry in Vietnam continues to expand rapidly causing import demand for cotton to grow significantly. Major boosting factors were the granting of most favored nation status (MFN) by the U.S. in 2001 and the entrance of Vietnam into the World Trade Organization (WTO) in 2007. The government of Vietnam provides strong incentives to foreign investments in textile production. It is projected that mill use and imports by Vietnam could increase by more than 10% during 2012/13 to reach 400,000 tons. Vietnam will account for 5% of world imports and will be among the world's five largest importers. USA supplies about 50% of imports by Vietnam, while India, Brazil, Pakistan, Australia and African countries supply most of the rest.

IMPORTS: VIETNAM

Thousand Tons

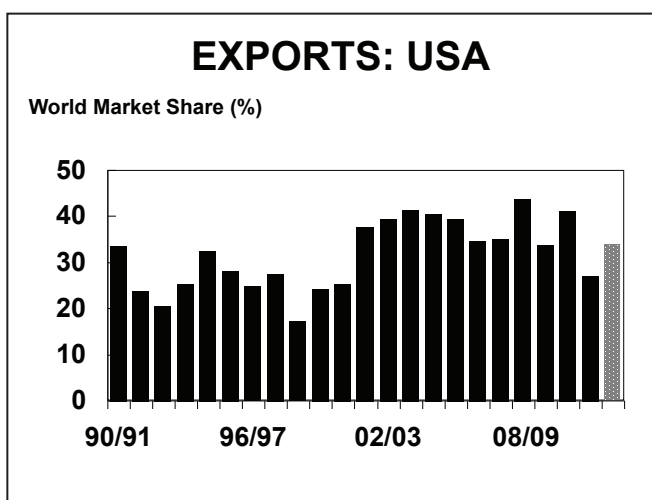

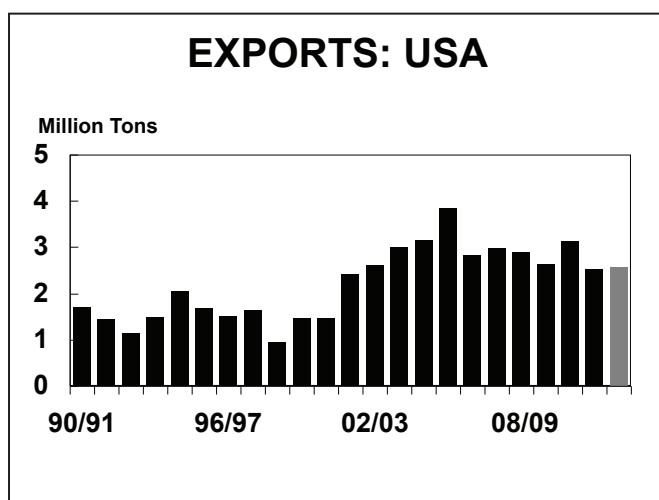

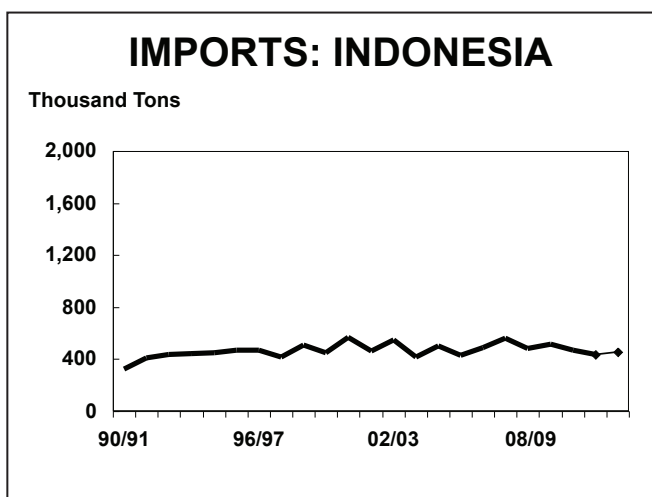

Imports by Indonesia are Stabilizing

In 2012/13, mill use and imports by Indonesia are projected to stabilize after suffering setbacks as a result of high volatility experienced in 2010/11. Some of the spinning companies recovered from the difficulties of 2011 and resumed growth. It is projected that imports by Indonesia will grow by 5% and will reach 450,000 tons in 2012/13, to be the fourth largest in the world (6%). Australia, Brazil, USA and India are projected to be the major suppliers of cotton to Indonesia in 2012/13.

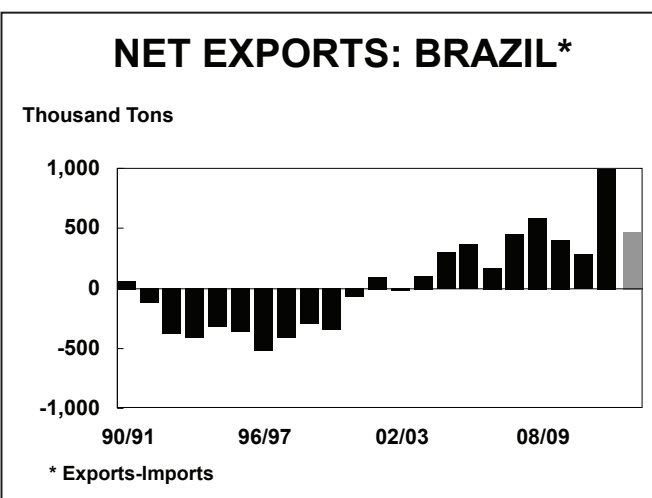

Exports from the USA Stable

U.S. cotton production is projected to increase by 8% during 2012/13 to 3.7 million tons. However, 2012/13 U.S. exports are estimated at 2.6 million tons, the same as in 2011/12, because of the projected reduction in imports by China. USA will remain the world's largest exporter, accounting for 34% of world exports, down from 41% in 2010/11, but up from 27% in 2011/12. It is estimated that China accounted for over half of U.S. shipments during 2011/12. Other countries in Asia accounted for about 20% of U.S. exports. Large shipments were made to Indonesia, Thailand, Taiwan, Pakistan, Bangladesh, Vietnam and Korea. Turkey remained the second largest destination for U.S. cotton in 2011/12, accounting for 10% of exports, while Mexico remained the third largest destination during the past season, accounting for about 8% of U.S. shipments.

Exports from Brazil are Expected to Decline

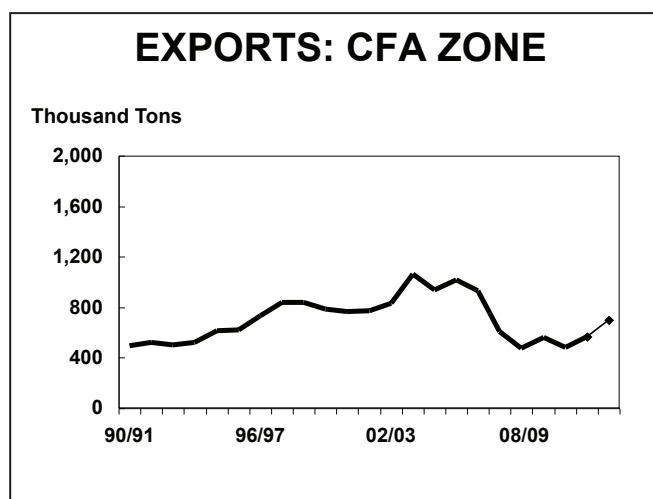

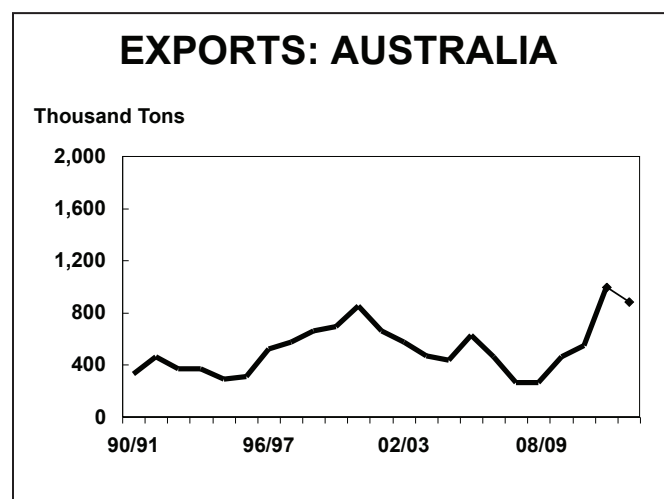

Brazilian cotton exports are projected to decline in 2012/13 to about 600,000 tons from a record 1 million tons shipped during 2011/12 as a result of record production during the past two seasons. In 2012/13, cotton area is projected to decline, shifting to competing crops, as a result of lower cotton prices. Brazil will be the fourth largest exporter during 2012/13, accounting for 8% of world exports. During the past several seasons, the government of Brazil provided marketing assistance to producers improving competitiveness of Brazilian cotton, both in domestic and international markets. China, Indonesia, Korea and Turkey are major buyers of Brazilian cotton. China accounts for one-third of Brazilian exports.

Exports from Australia and the CFA Zone Increase

Australian exports reached a record 1 million tons in 2011/12 and are projected to remain close to this level in 2012/13, as production is projected to be close to a record again. Greatly improved water availability and record prices caused Australian production to reach 1.1 million tons in 2011/12. Exports from Australia accounted for 11% of world trade in 2011/12 and the share could rise to 12% in 2012/13. China accounted for an estimated 65% of exports from Australia in 2011/12. Indonesia accounted for 10% of Australian exports, while other countries in East Asia were the major destinations for Australian cotton.

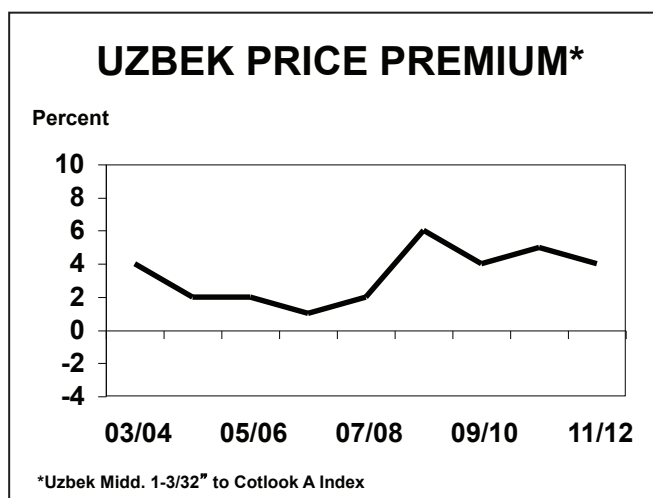

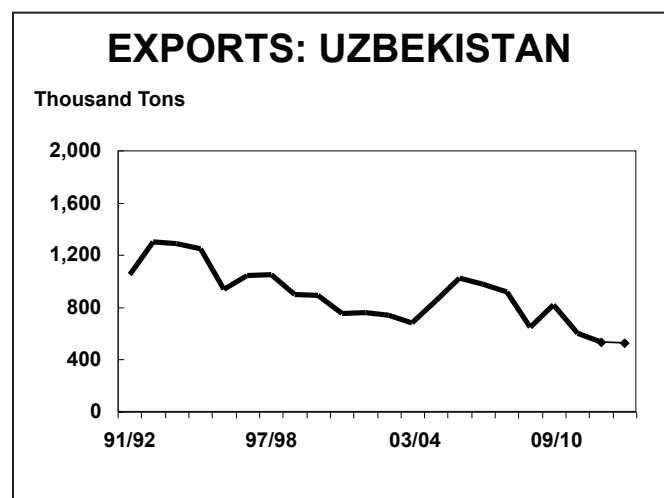

CFA zone cotton production is projected to rise by 12% during 2012/13 to 770,000 tons as a result of high prices received by farmers during 2011/12. It will be the second season of recovering production in the CFA zone after several seasons of declines since reaching a record of 1.1 million tons in 2004/05. Higher prices received by producers were the reason for the recent rebound. In 2012/13, exports from the CFA zone are projected to increase by 18% to reach 670,000 tons. China became the largest destination for exports from the CFA zone during the past several seasons, accounting for about half of all shipments. Other countries in East Asia remain important destinations for West African cotton.

Exports from Uzbekistan are Stable

Production in Uzbekistan is not projected to change significantly in 2012/13 and is estimated at about 900,000 tons. Exports by Uzbekistan could decline moderately to 530,000 tons because of the projected reduction in import demand from China and rising competition between exporters. Bangladesh, China and Russia are major destinations for cotton from Uzbekistan.

Uzbek cotton is traditionally quoted at a premium to the Cotlook A Index. Between 2003/04 and 2009/10, the premium averaged 3%. In 2003/04 the premium was 4% and gradually declined to 1% by 2006/07. During this period, cotton production in Uzbekistan climbed from 900,000 tons to 1.2 million tons. In 2007/08, the premium for Uzbek cotton rose to 2% and jumped to 6% in

2008/09. During 2009/10, the premium averaged 4%, and increased to 5% during 2010/11. In 2011/12, the premium was at 4% again, still staying above the long-term average. Between 2007/08 and 2011/12, cotton production in Uzbekistan declined from 1.2 million tons to 880,000 tons. The variability in the premium for Uzbek cotton seems to be explained by changes in its supply.

World Extra-fine Production is Declining in 2011/12

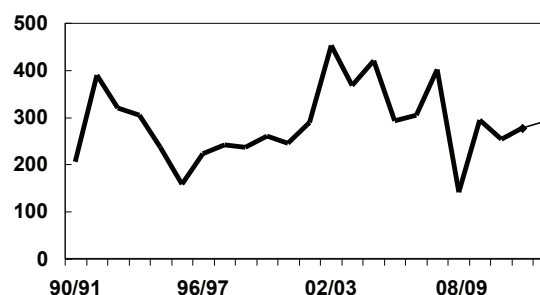

World extra-fine cotton production is projected to decline by more than 20% to 500,000 tons during 2012/13 in response to lower prices at the time of planting compared with 2011/12 rates. This follows two seasons of recovery in production fueled by high prices. Most of the decline will be accounted for by Egypt and USA. Consumption of extra-fine cotton in producing countries is projected to increase moderately during 2012/13 to 405,000 tons as a result of lower prices. Exports are also projected to grow by 4% to 290,000 tons. The USA, Egypt and Sudan are expected to account for most of the projected modest increase in exports.

Share of Biotech Cotton in Trade is Rising

Biotech cotton production and trade continues to expand. Based on officially reported data, biotech cotton accounted for 20% of world area, 28% of world production and 33% of world exports

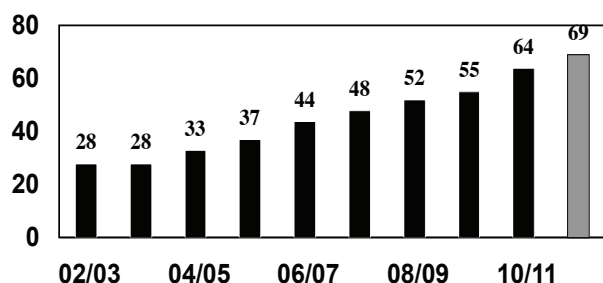

EXPORTS: EXTRA-FINE COTTON

Thousand Tons

BIOTECH COTTON PRODUCTION

Percent of world total

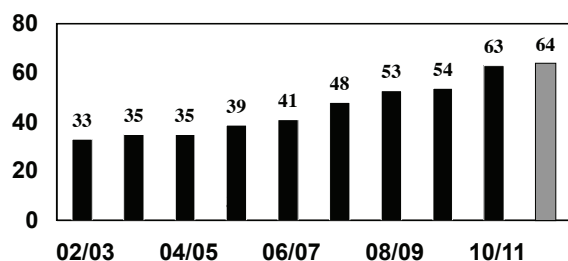

in 2002/03. In 2011/12, it is estimated that biotech cotton accounted for 66% of world area, 69% of world production, and 64% of exports. World exports of biotech cotton are estimated based on production shares in exporting countries. The largest exporters of biotech cotton are the USA, India and Australia.

It is evident that the share of biotech cotton in textiles traded in all markets is rising and is exceeding two-thirds of production. There are no price differentials for biotech and non-biotech cotton fiber or textiles containing biotech cotton. There is no evidence of rejection or price discrimination against biotech cotton, nor evidence of price premiums for non-biotech cotton, by any segment of the market or region. In practice, markets do not identify biotech cotton content, but rather evaluate cotton properties based on quality characteristics.

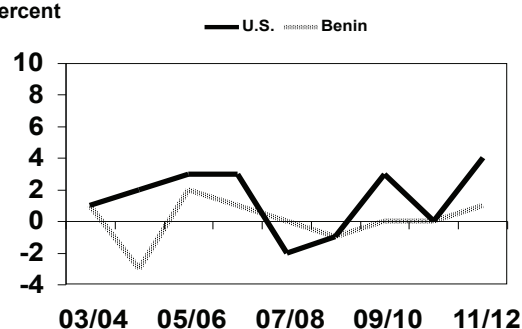

BIOTECH COTTON EXPORTS

Percent of world total

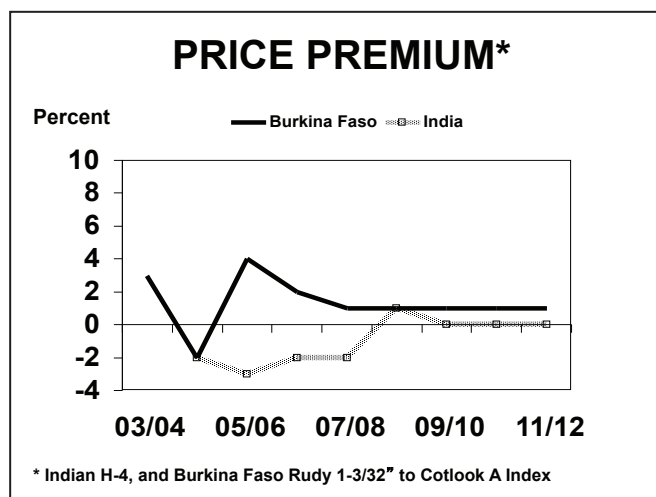

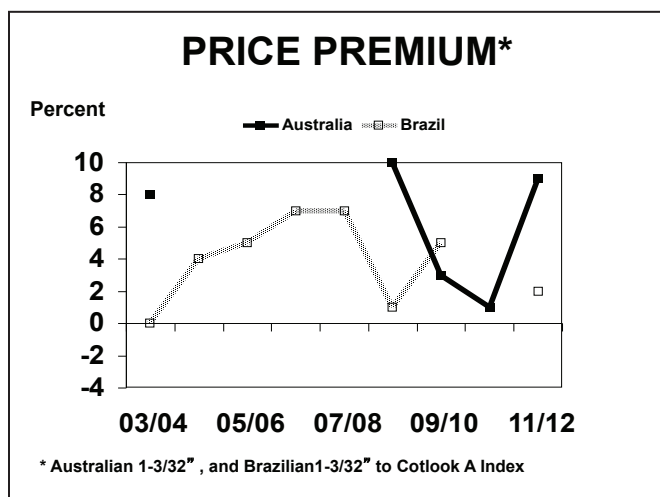

PRICE PREMIUM*

Percent

*Memphis/Orleans/Texas Midd. 1-3/32", Benin BELA 1-3/32" to Cotlook A Index

For example, a comparison of long-term price ratios of medium grades of U.S. Memphis/Orleans/Texas and Benin Bela quotes to the Cotlook A Index indicates that most of the time, U.S. cotton (biotech) enjoys an equal or higher premium to the A Index compared with cotton from Benin (non-biotech). Although other factors, such as contamination or a lack of HVI data may limit the premium for Benin cotton, U.S. cotton is not sold at a discount. It also seems that the introduction of biotech cotton in Burkina Faso in 2008/09 did not lead to reduce premiums. Premiums paid for Indian cotton rose during the past four seasons, even though more than 90% of Indian cotton is biotech. Analyses of quotes for Australian and Brazilian middling 1-1/32" (both countries are planting biotech cotton) indicate that these growth (when quoted) enjoyed premiums to the A Index during the past nine seasons.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1984/85, Argentina reports exports to China (Taiwan) of 20,730 tons; China (Taiwan) reports imports from Argentina of 19,740 tons. Imports may differ from exports for a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

1/ Data on exports by Paraguay and Zimbabwe during 1984/85 are not available.

*The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1988/89, Argentina reports exports to China (Taiwan) of 13,640 tons; China (Taiwan) reports imports from Argentina of 8,880 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1994/95, Australia reports exports to Japan of 89,000 tons; Japan reports imports from Australia of 90,110 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2000/01, Australia reports exports to Japan of 140,320 tons; Japan reports imports from Australia of 135,650 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2005/06, Australia reports exports to Japan of 34 030 tons; Japan reports imports from Australia of 33,740 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2010/11, Australia reports exports to Japan of 18,730 tons; Japan reports imports from Australia of 17,340 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.
