DEVELOPMENTS IN WORLD COTTON TRADE

World cotton trade is projected to remain above 9 million tons in 2013/14 for the third consecutive season; nevertheless, world trade is expected to decline moderately, from 9.8 million tons in 2012/13 to 9.2 million tons in 2013/14. China's policy of building a national strategic reserve during the past two seasons helped to keep international trade in the record territory and supported domestic and international prices. China imported close to 4 million tons of cotton during 2012/13, accounting for 40% of world trade, while adding about 4.5 million tons of domestic cotton into the reserve. At the start of 2013/14, cotton stocks in China are estimated at more than 110 percent of mill use. However, the minimum support price in China remains unchanged for 2013/14, which means that more cotton will go into the reserve and China will remain a major importer. China imports are projected down by 15% in 2013/14. Imports by countries other than China are projected to remain unchanged during 2013/14 at 5.9 million tons.

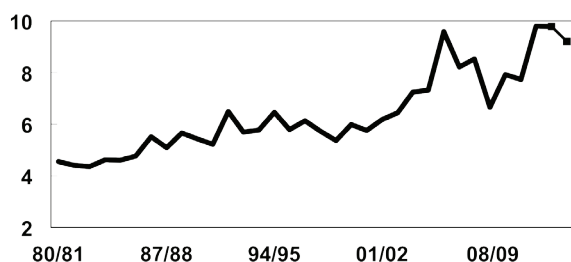

Purchases by the Chinese government helped to stabilize world prices during 2012/13, and to reduce volatility close to the long-term average in contrast to the very high volatility experienced during 2010/11, accompanied by an exploding number of contract defaults by buyers and sellers, causing financial losses. As a result, the number of disputes and arbitration cases declined drastically during 2012/13.

China, Bangladesh, Turkey, Pakistan, Indonesia, Vietnam and Thailand will remain the world largest importers in 2013/14, accounting for 76% of world trade (unchanged from 2012/13). Other major consuming countries will offset the projected moderate decline in demand and imports by China.

USA, India, Australia, Francophone Africa, Brazil and Uzbekistan will remain the largest exporters during 2013/14, accounting for 81% for world exports (unchanged from 2012/13). Exports by USA, Brazil, and India are projected to decline, partially offset by increased exports from Francophone Africa and Australia. Exports by Uzbekistan are projected to remain unchanged.

WORLD COTTON IMPORTS

Million Tons

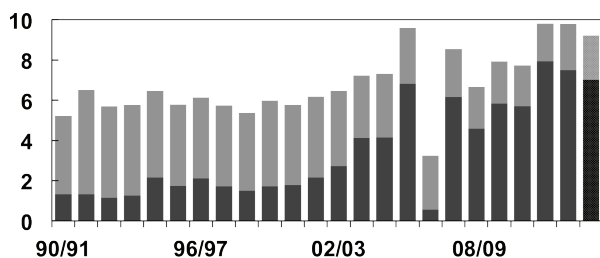

World imports as a share of world cotton mill use averaged 32% during the ten seasons between 2001/02 and 2010/11. In 2011/12, the share rose to a record 44% because of record imports by China caused by the stockpiling policy. During 2012/13, the share is estimated at 41%, still substantially higher than the long-term average. It is projected that world imports will decline to 38% of world mill use in 2013/14. World exports as a share of world cotton production also averaged 32% between 2001/02 and 2010/11, and reached 35% in 2011/12. In 2012/13 and 2013/14 the share is projected at 37%. The lowest shares of trade to production and mill use since 1990/91 were recorded in 2008/09 at 28 percent.

Substantial changes in cotton trade flows occurred during the past fifteen seasons. Industrial countries (North America, Western Europe, Australia and Japan) accounted for 21% of world mill use, 29% of world imports, and 36% of world exports in

1998/99. The decline in mill use in industrial countries, and the rapid expansion in Asia, led to a major shift in the destination of world imports. It is projected that in 2013/14, industrial countries will account for 4% of mill use, 2% of world cotton imports and 45% of world exports. The share of industrial countries in world exports remains high due to large shipments from USA and Australia.

Asia became the primary destination for cotton shipments during the past decade. In 1998/99, Asia accounted for 58% of world mill use, 47% of world imports and 4% of world exports. It is projected that Asia will account for 78% of world mill use, 78% of world imports and 20% of world exports in 2013/14. In contrast, Africa's share of world mill use and exports declined during the last decade. In 1998/99, Africa accounted for 3% of world imports and consumption and 23% of world exports. It is projected that in 2013/14, Africa will account for 1% of world mill use, 2% of imports and 16% of world exports.

South America accounted for 6% of world mill use, 8% of world imports and 6% of world exports in 1998/99 and is projected to account for 5% of mill use, for 2% of world imports and 9% of world exports in 2013/14. Compared with 1998/99, cotton production in South America is projected to more than double in 2013/14, as a result of the expansion in Brazil that started in 2003/04. During the past fifteen seasons, mill use in South America rose by 14%.

China Boosts World Cotton Trade

Cotton imports by China are projected at 3.4 million tons in 2013/14 (down 15%), assuming that the system of procurement at a minimum support price remains operational and as a result a large portion of domestic production enters into the national reserve again.

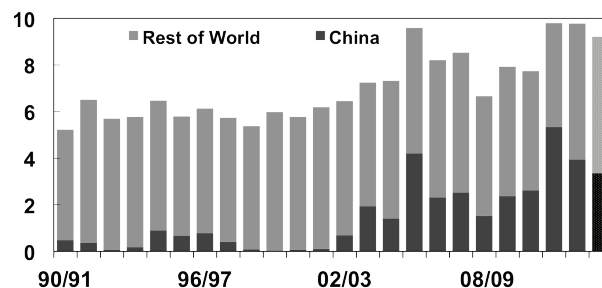

China maintains a significant strategic reserve of cotton, which serves as a national buffer stock. China releases cotton to the market through a system of auctions when there is a shortage; the government replenishes the reserve when there is an abundance of supplies thus supporting prices.

In 2011/12, China decided to rebuild the national reserve and implemented a minimum cotton support price directly purchasing cotton from producers. The state reserve procurement price for 2011/12 was set at 19,800 yuan per ton for Type 328 (141 US

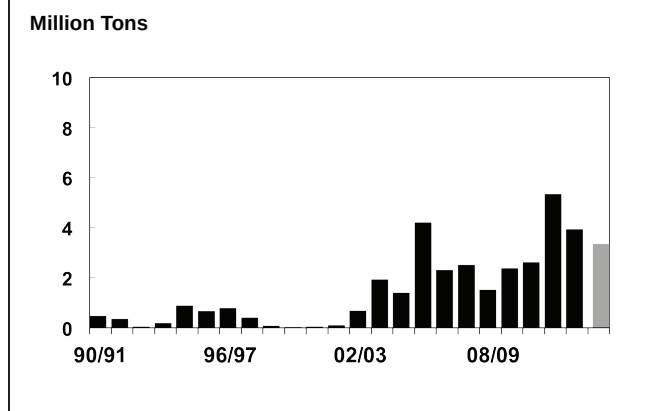

IMPORTS

Million Tons

■ Rest of World ■ China

IMPORTS: CHINA

cents per pound at the end of July 2012). In 2011/12, the China National Cotton Reserve Corporation (CNCRC) purchased 3.1 million tons of domestic cotton and an estimated one million tons of imported cotton between September 2011 and March 2012. These purchases boosted domestic prices and imports by mills.

For 2012/13, the government procurement price was increased to 20,400 yuan per ton (147 US cents per pound at the seasonal average exchange rate) and between September 2012 and March 2013, China purchased 6.5 million tons of the 2012/13 crop for the reserve. These purchases by the Chinese government provided support to domestic and international prices and helped to keep world trade in record territory of 9.7 million tons, with Chinese imports accounting for 3.8 million tons. This policy also ensures that mill use and market share of cotton in China will continue to suffer. For 2013/14, the minimum support price remains unchanged at 20,400 yuan per ton (150 cents per pound as of mid-July 2013), and more government purchases

are projected.

In 2012/13, China started to auction cotton from the reserve to mills. Between September 2012 and July 2013, China auctioned 3.1 million tons at an average price close to 140 cents per pound. These sales from the reserve are aimed at easing the supply situation and reducing the cost of the reserve. Release of the reserves to domestic mills reduces the need for imports and limits growth in world trade. It is estimated, that the national reserve in China currently holds about 8.5 million tons. It is likely that China will continue auctioning reserve cotton regularly over the coming year. However, the size of the national cotton reserve may increase further in 2013/14, as more cotton could enter the reserve than auctioned.

As a result of the rebuilding of the national reserve, China held the largest share of global stocks in the world (51%) at the start of 2013/14, accounting for 113% of mill use in China. By the end of 2013/14 the share could rise to 140%.

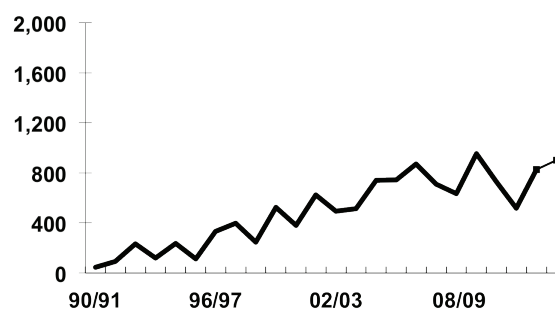

It is estimated that USA accounted for about 30% of imports by China in 2012/13; India for 25%; Australia for about 18%; Brazil for 7%; and Uzbekistan for about 6%.

Imports by Turkey are Projected to Rise

Cotton production in Turkey is declining while mill use is growing moderately. As a result, in 2013/14 cotton imports by Turkey are projected to reach 900,000 tons accounting for 10% of world trade. Turkey will become the world's second largest importer after China. In 2012/13, an estimated 50% of Turkish imports originated in the USA, while the rest were imported from Greece, Brazil, and Central Asia. The high share of U.S. cotton in Turkish imports is explained by the importance of GSM-102 credit guarantees, actively used by Turkish buyers. In fiscal year 2012 about \$165 million were used by Turkish importers for cotton, and during fiscal 2013, \$220 million were allocated so far. Long-term credit (up to 3 years) and competitive terms for the credit fit well with Turkish banks and importers. Cotton Council International (CCI) of the USA runs an active marketing and promotional campaigns in Turkey.

IMPORTS: TURKEY

Thousand Tons

Higher Imports by Bangladesh are Expected

It is projected that imports of cotton and cotton yarn by Bangladesh will continue to grow in 2013/14 due to increasing mill use. In 2013/14, imports by Bangladesh are projected to increase by 130,000 tons to reach 850,000 tons, the third largest imports after China and Turkey. The robust expansion of weaving and spinning in Bangladesh during the past decade slowed during 2011/12, and cotton imports declined substantially due to reduced export demand for textiles and garments and due to widespread defaults on cotton contracts in 2010/11 caused by high volatility in cotton prices. Electric power constrains is another factor limiting growth in mill use in Bangladesh. In 2013/14, imports by Bangladesh are expected to account for 9% of world trade. In 2012/13, India

became the largest supplier of cotton to Bangladesh ahead of Uzbekistan. The two countries account for an estimated 70% of imports by Bangladesh. Other Central Asian countries and Australia account for most of the rest of Bangladeshi imports. Uzbek and Indian cottons have the largest market share in Bangladesh because of price competitiveness, short delivery times, and quality characteristics preferred by spinners.

Large imports by Pakistan

During 2012/13, Pakistan more than doubled imports of cotton to 520,000 tons becoming the fourth largest importer accounting for 6% of world trade. For 2013/14 a moderate increase in imports 540,000 tons is projected. Sharp increase in imports was caused by a gap between growing mill use and declining production. Production suffered a setback during 2012/13 because of a widespread leaf curl virus disease, while mill use was supported by growing demand for cotton yarn, especially from China.

Textile Industry in Indonesia is Recovering

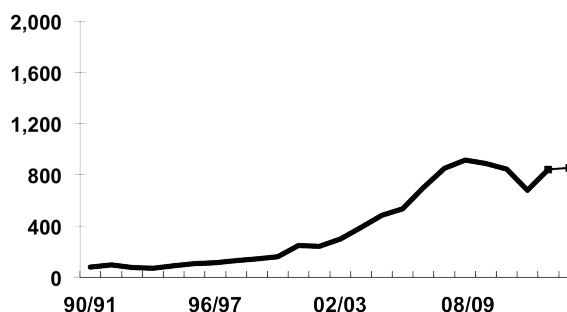

The Indonesian textile industry is recovering from the effects of high price volatility and contract defaults experienced in 2011. Some of the smaller spinning companies had to close, while larger spinning mills started to expand during 2012/13. In 2013/14, mill use in Indonesia is projected to increase by 7%. It is projected that imports by Indonesia will reach 550,000 tons in 2013/14, accounting for 6% of world trade and the fifth largest in the world. Brazil, Australia, USA and India were the major suppliers of cotton to Indonesia in 2012/13.

Textile Industry in Vietnam is Expanding Fast

The textile industry in Vietnam continues to expand rapidly causing import demand for cotton to grow significantly. Major boosting factors were the granting of most favored nation status (MFN) by the U.S. in 2001 and the entrance of Vietnam into the World Trade Organization (WTO) in 2007. The government of Vietnam provides strong incentives to foreign investments in textile production. Strong demand for cotton yarn from China and Turkey is another factor causing imports of cotton by Vietnam to grow. It is projected that cotton mill use in Vietnam could increase by 10% during 2013/14 and imports could reach 450,000

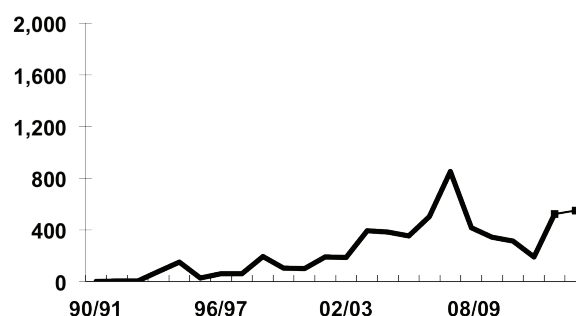

IMPORTS: BANGLADESH

Thousand Tons

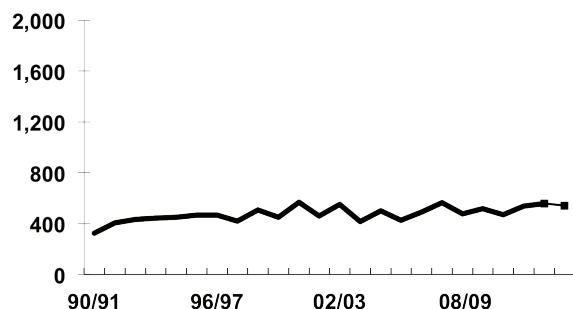

IMPORTS: PAKISTAN

Thousand Tons

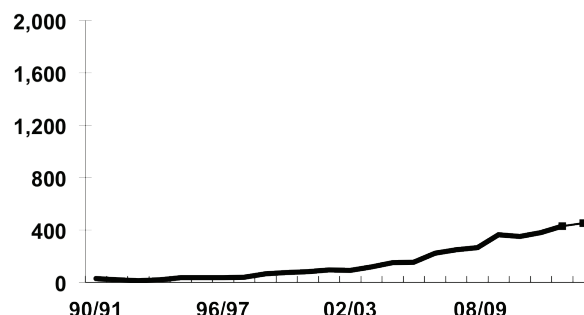

IMPORTS: INDONESIA

Thousand Tons

IMPORTS: VIETNAM

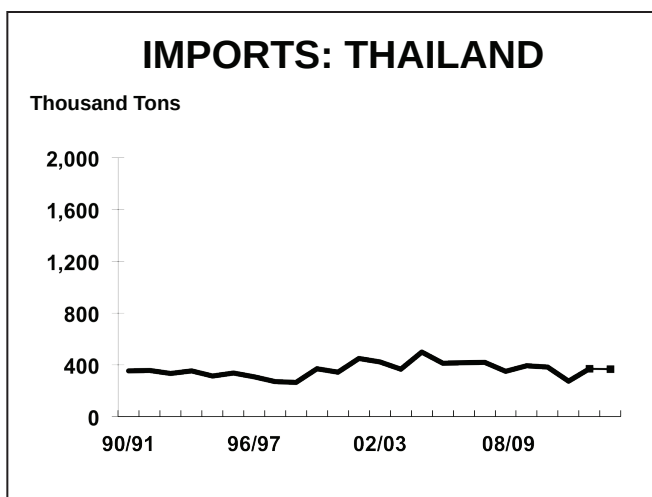

Thousand Tons

tons. Vietnam will account for 5% of world imports and will be among the world's six largest importers. USA supplies about 30% of imports by Vietnam, while Brazil, India, Pakistan, Australia and African countries supply most of the rest.

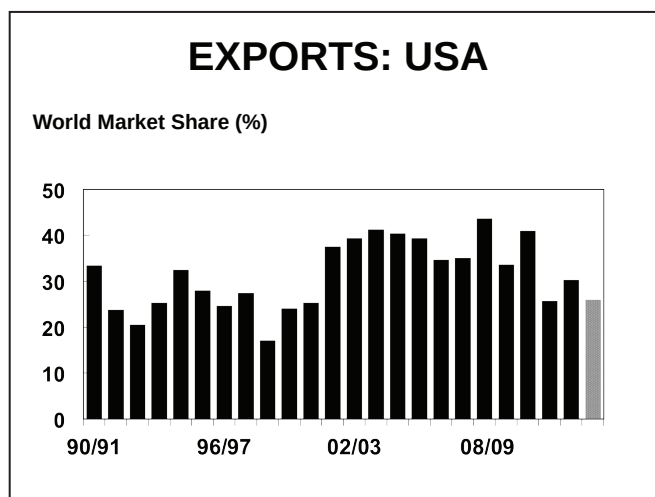

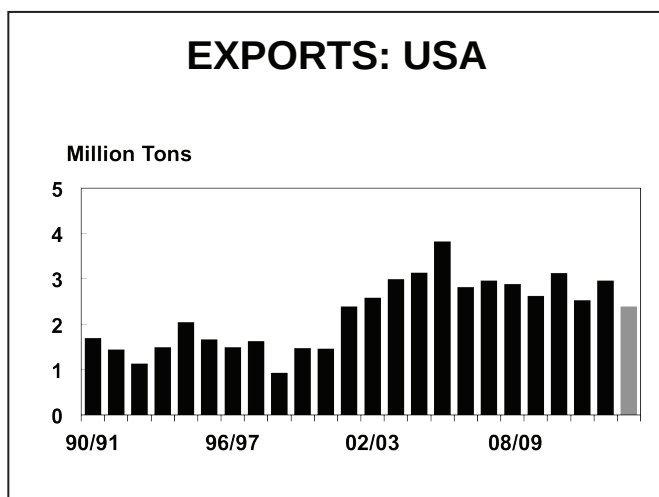

Imports by Thailand Stabilizes

The textile industry in Thailand started to recover during 2012/13 supported by economic growth and increased demand for textile exports. During 2012/13, imports of cotton by Thailand rose by an estimated 34% and reached 370,000 tons, the seventh largest in the world and accounting for 4% of world trade. A modest increase in imports is projected for 2013/14. Australia, USA and Brazil were the largest suppliers of cotton to Thailand in 2012/13.

Exports from the USA Projected to drop

USA will remain the largest exporter of cotton during 2013/14, however U.S. exports are projected to decline by 20% to 2.4 million tons accounting for 26% of world exports (down from 30% in 2012/13). A drop in U.S. cotton production is the reason for the projected decline in exports. It is estimated that China accounted for 45% of U.S. shipments during 2012/13. Other countries in Asia accounted for about 20% of U.S. exports. Turkey remained the second largest destination for U.S. cotton in 2012/13, accounting for 15% of exports, while Mexico remained the third largest destination, accounting for about 7% of U.S. shipments. Large shipments were made to Vietnam, Pakistan, Indonesia, Taiwan, Thailand, and Korea.

Indian Exports Stable

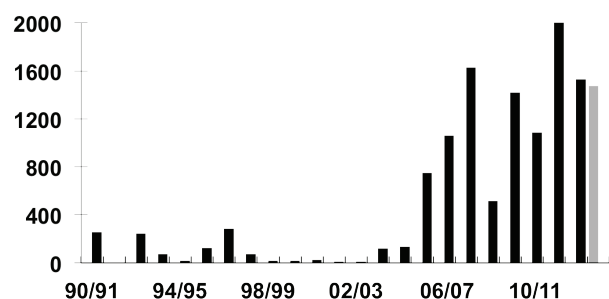

India emerged as one of the largest cotton exporters in 2005/06, with increased domestic production. Favorable growing conditions, a low incidence of pests and diseases, increased planting of new higher yielding varieties and Bt cotton, improved crop management practices, increased cotton demand and relatively higher market prices resulted in improved yields, quality and increased area during the past several seasons.

India is projected to remain the world's second largest exporter in 2013/14 behind USA, accounting for 1.5 million tons (the same as in 2012/13), or 16% of world exports. Indian mill use is growing significantly, benefiting from rising cotton yarn demand from China and Bangladesh. Growing mill use is limiting supplies available for exports, despite the projected increase in production.

India has a system of Minimum Support Price (MSP), and for 2012/13, the MSP for medium staple cotton (J-34) was increased by 29% to Rs. 3,600 per 100 kg of seed cotton (up from Rs. 2,800), an equivalent of 87 cents per pound of lint at the season average exchange rate. The average domestic price for the same variety during the period was 79 cents per pound. Domestic prices were rising during 2012/13 and reached 83 cents per pound during July 2013. As a result, the government-owned Cotton Corporation of India purchased 425,000 tons of cotton, building a strategic reserve. The purchase expense for the government is estimated

EXPORTS: INDIA

Thousand Tons

at about \$910 million dollars and if warehousing and handling costs are included, the total cost to the government could be about \$1 billion. It is expected that the government will be auctioning these stocks to mills, as domestic prices climb above the purchase cost.

An estimated 60% of Indian exports in 2012/13 went to China. Bangladesh accounted for 20% of Indian exports and Pakistan for about 10%. Vietnam is another growing market for Indian cotton. In 2012/13 India increased imports of cotton and in 2013/14 imports are estimated at 250,000 tons. India is importing extra-fine and fine cotton varieties from the USA and Egypt and also upland varieties based on price considerations.

Record Exports from Australia

Australian exports are heading for a third consecutive record in 2013/14 and are projected to reach 1.2 million tons, up from

1 million tons exported during both 2011/12 and 2012/13. Greatly improved water availability and high prices during the past three seasons caused Australian production to remain close to record levels of 1 million tons. Australia is projected to remain the third largest exporter of cotton during 2013/14 accounting for 13% of world trade. China accounted for an estimated 65% of exports from Australia in 2012/13; Indonesia and Thailand for 7% each. Korea, Bangladesh, Pakistan and Vietnam were other major destinations for Australian cotton.

The CFA Zone Exports Increases

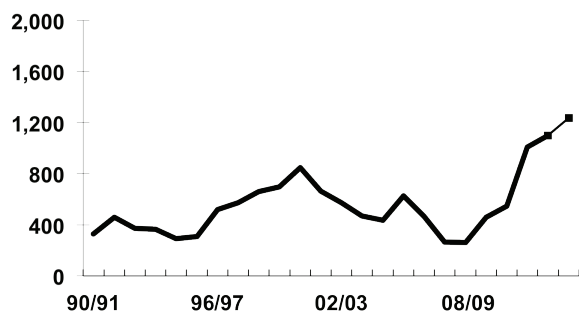

CFA zone cotton production is rising since 2011/12 as a result of relatively high prices received by farmers. In 2013/14, production in the CFA zone is projected to reach 950,000 tons, which is still below the record of 1.1 million tons reached in 2004/05. In 2013/14, exports from the CFA zone are projected to increase by 23% to reach 950,000 tons. China became the largest destination for exports from the CFA zone during the past several seasons, accounting for about half of all shipments. Other countries in East Asia remain important destinations for West African cotton.

Exports from Brazil are Expected to Decline

Brazilian cotton exports are projected to decline in 2013/14 to about 800,000 tons from an estimated 900,000 tons shipped during 2012/13 as a result of a 33% drop in production during 2012/13, caused by a shift of cotton area to competing crops. Brazilian exports are down from a record 1 million tons exported during 2011/12, when production was close to a record 1.9 million tons. Brazil will be the fourth largest exporter during 2013/14, accounting for 8% of world exports. It is estimated that in 2012/13 China accounted for one-third of Brazilian exports, Indonesia and Korea for 15% each, while Pakistan, Turkey and Vietnam for 6% each.

Exports from Uzbekistan are Stable

Production in Uzbekistan is projected stable at 1 million tons in 2013/14, and exports are projected unchanged at 650,000 tons. Bangladesh, China and Russia are major destinations for cotton from Uzbekistan. The share of cotton directed to domestic mills continues to increase as investments in the spinning sector of Uzbekistan continue to grow benefiting from discounted (by 20%) supplies of Uzbek cotton and rising demand for cotton yarn from China and other markets.

Uzbek cotton is traditionally quoted at a premium to the Cotlook A Index. Between 2003/04 and 2009/10, the premium averaged 3%. In 2003/04 the premium was 4% and gradually declined to 1% by 2006/07. During this period, cotton production in Uzbekistan climbed from 900,000 tons to 1.2 million tons. In 2007/08, the premium for Uzbek cotton rose to 2%. Between 2008/09 and 2011/12, the premium averaged 5%. In 2012/13, the premium was at 3% again, close to the long-term average. Between 2007/08 and 2011/12, cotton production in Uzbekistan declined from 1.2 million tons to 880,000 tons and is estimated at 1 million tons in 2012/13. The variability in the premium for Uzbek cotton seems to be explained by changes in its supply.

UZBEK PRICE PREMIUM*

Percent

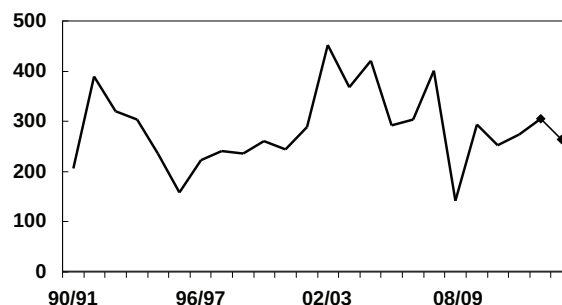

*Uzbek Midd. 1-3/32" to Cotlook A Index

World Extra-fine Production is Declining in 2013/14

World extra-fine cotton production is projected to decline by more than 14% to 380,000 tons during 2013/14 in response to lower prices at the time of planting compared with 2012/13 rates. This will be the second season of decline in production caused by lower prices. Most of the decline will be accounted for by the USA. Consumption of extra-fine cotton in producing countries is projected to remain almost unchanged during 2013/14 at 380,000 tons. Exports are projected to decline by 14% to 260,000 tons as a result of reduced supplies. The USA will account for most of the projected decline in exports.

EXPORTS: EXTRA-FINE COTTON

Thousand Tons

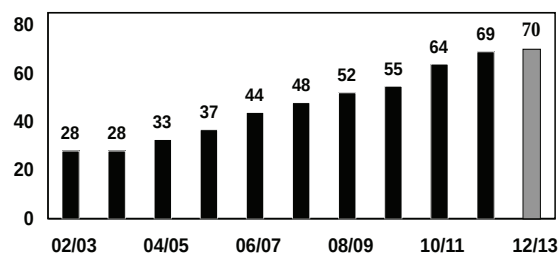

Biotech Cotton Dominates Trade

Biotech cotton production continues to expand. Based on officially reported data, biotech cotton accounted for 20% of world area, 28% of world production and 33% of world exports in 2002/03. In 2012/13, it is estimated that biotech cotton accounted for 66%

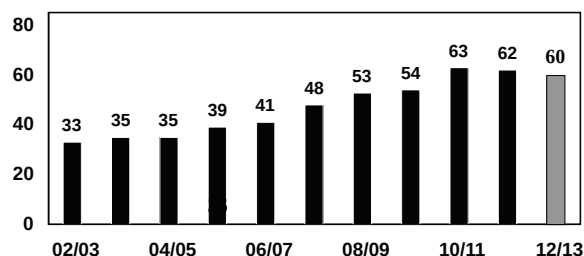

BIOTECH COTTON PRODUCTION

Percent of World Total

BIOTECH COTTON EXPORTS

Percent of World Total

of world area, 70% of world production, and 60% of exports. World exports of biotech cotton are estimated based on production shares in exporting countries. The largest exporters of biotech cotton are the USA, India and Australia.

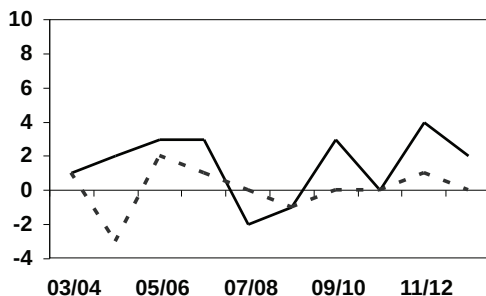

It is evident that the share of biotech cotton in textiles traded in all markets is rising and is exceeding two-thirds of production. There are no price differentials for biotech and non-biotech cotton fiber or textiles containing biotech cotton. There is no evidence of rejection or price discrimination against biotech cotton, nor evidence of price premiums for non-biotech cotton, by any segment of the market or region. In practice, markets do not identify biotech cotton content, but rather evaluate cotton properties based on quality characteristics.

For example, a comparison of long-term price ratios of medium grades of U.S. Memphis/Orleans/Texas and Benin Bela quotes to the Cotlook A Index indicates that most of the time, U.S. cotton (biotech) enjoys an equal or higher premium to the A Index compared with cotton from Benin (non-biotech). Although other factors, such as contamination or a lack of HVI data may limit the premium for Benin cotton, U.S. cotton is not sold at a discount. It also seems that the introduction of biotech cotton in Burkina Faso in 2008/09 did not lead to reduce premiums. Premiums paid for Indian cotton rose and were stable during the past five seasons, even though more than 90% of Indian cotton is biotech. Analyses of quotes for Australian and Brazilian middling 1-1/32" (both countries are planting biotech cotton) indicate that these growths (when quoted) enjoyed high premiums to the A Index during the past ten seasons.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1984/85, Argentina reports exports to China (Taiwan) of 20,730 tons; China (Taiwan) reports imports from Argentina of 19,740 tons. Imports may differ from exports for a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

1/ Data on exports by Paraguay and Zimbabwe during 1984/85 are not available.

*The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1988/89, Argentina reports exports to China (Taiwan) of 13,640 tons; China (Taiwan) reports imports from Argentina of 8,880 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1993/94, Australia reports exports to Japan of 127,530 tons; Japan reports imports from Australia of 122,000 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1999/00, Australia reports exports to Japan of 136,400 tons; Japan reports imports from Australia of 131,250 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2004/05, Australia reports exports to Japan of 43,770 tons; Japan reports imports from Australia of 44,350 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2009/10, Australia reports exports to Japan of 18,190 tons; Japan reports imports from Australia of 17,830 tons. Imports may differ from exports in a given season because of time spent in transit; changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.
