DEVELOPMENTS IN WORLD COTTON TRADE

World cotton trade is projected to decline to 8 million tons in 2014/15 (down one million tons) because of a reduction of imports by China. China's policy of stockpiling cotton in the national strategic reserve implemented during the past three seasons will end in 2014/15. This policy helped to keep the international trade of cotton at record levels, above 9 million tons, and supported domestic and international prices. China imported about 3 million tons of cotton during 2013/14, accounting for 34 percent of world trade, while adding about 6.3 million tons of domestic cotton to its official reserve. At the start of 2014/15, cotton stocks in China are estimated at more than 150 percent of projected mill use. While imports by China are projected to fall by 30 percent in 2014/15, imports by other countries are projected to increase moderately to 6 million tons. Purchases by the Chinese government helped to stabilize world prices during the past three seasons and to reduce volatility to a level close to the long-term average in contrast to the very high volatility experienced during 2010/11.

China, Bangladesh, Turkey, Pakistan, Indonesia, Vietnam and Thailand will remain the world's largest importers in 2014/15,

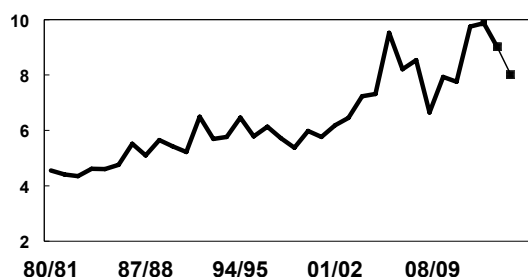

accounting for 76 percent of world trade (down from 79 percent in 2013/14). The decline in the share of these countries is caused by the projected drop in demand and imports by China.

USA, India, Australia, Francophone Africa, Brazil and Uzbekistan will remain the largest exporters during 2014/15, accounting for 80 percent of world exports (down from 83 percent in 2012/13). Exports by India and Australia are projected to decline, partially offset by increased exports from USA and Brazil. Exports by Francophone Africa and Uzbekistan are projected to remain unchanged.

World imports as a share of world cotton mill use averaged 32 percent during the ten seasons between 2001/02 and 2010/11. In 2011/12, the share rose to a record 43 percent because of record imports by China caused by the stockpiling policy. During 2012/13, the share declined to 41 percent and to 38 percent in 2013/14, still substantially higher than the long-term average. World imports are projected to decline to 33 percent of world mill use in 2014/15. World exports as a share of world cotton production also averaged 32 percent between 2001/02 and 2010/11, and reached 35 percent in 2011/12. In 2012/13 the share

WORLD COTTON EXPORTS

Percent of Production

rose to 37 percent and then declined to 35 percent in 2013/14. The share is projected to decline to 30 percent in 2014/15. The lowest shares of trade to production and mill use since 1990/91 were recorded in 2008/09, at 28 percent.

Substantial changes in cotton trade flows occurred during the past 16 seasons. Developed economies (North America, Western Europe, Australia and Japan) accounted for 21 percent of world mill use, 29 percent of world imports, and 36 percent of world exports in 1998/99. The decline in mill use in these areas and the rapid expansion in Asia led to a major shift in the destination of world imports. In 2014/15, developed economies are projected to account for 4 percent of mill use, 3 percent of world cotton imports and 40 percent of world exports. The share of the developed economies in world exports remains high due to large shipments from USA and Australia.

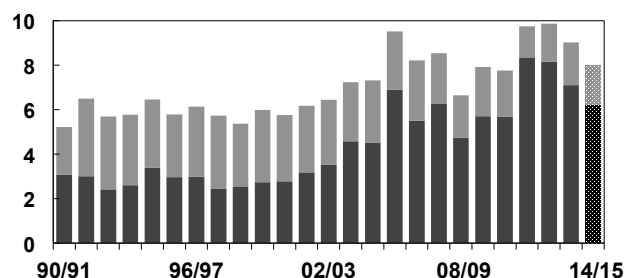

Asia became the primary destination for cotton shipments during the past decade. In 1998/99, Asia accounted for 58 percent of world mill use, 47 percent of world imports and 4 percent of world exports. It is projected that Asia will account for 78 percent of world mill use, 78 percent of world imports and 16 percent of world exports in 2014/15.

In contrast, Africa's share of world mill use and exports declined

WORLD IMPORTS

Million Tons

■ Asia ■ Others

during the last decade. In 1998/99, Africa accounted for 3 percent of world imports and consumption and 23 percent of world exports. It is projected that in 2014/15, Africa will account for 2 percent of world mill use, 2 percent of imports and 15 percent of world exports.

South America accounted for 6 percent of world mill use, 8 percent of world imports and 6 percent of world exports in 1998/99 and is projected to account for 5 percent of mill use, for 3 percent of world imports and 10 percent of world exports in 2014/15. Compared with 1998/99, cotton production in South America is projected to more than double in 2014/15, as a result of the expansion in Brazil that started in 2003/04. During the past 16 seasons, mill use in South America rose by 10 percent.

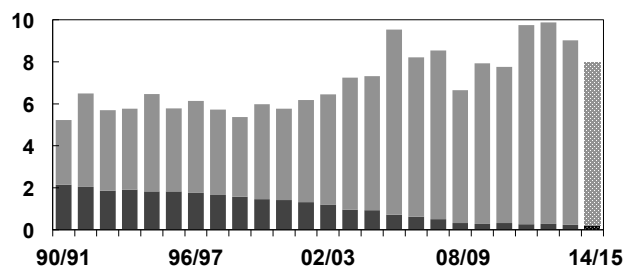

China Will Import Less Cotton in 2014/15

The Chinese government announced that it would end its reserve building policy in 2014/15 and instead provide a direct subsidy to cotton producers in Xinjiang with a target price of 19,800 yuan per ton (about 146 cents per pound). Details of the implementation of the new subsidy program remain unknown at this time. China is expected to continue releasing cotton from the reserve to mills in 2014/15, which would lead to lower prices

■ Rest of World ■ China

and fewer imports. The ICAC projects that imports by China in 2014/15 will decline by one-third to 2 million tons (25 percent of world imports) as a greater share of the domestic production and stocks will be released to mills in China.

China is the world's largest producer, consumer and importer of cotton, and cotton policies in that country have a major impact on fiber trade and prices. In 2013/14, China imported about 3 million tons (down 32 percent from 2012/13) and accounted for one third of world cotton trade. During the past three seasons China imported 12.8 million tons of cotton, while most of the cotton produced domestically was acquired by the government at support prices close to 150 cents per pound (world prices averaged around 93 cents per pound) and has been stored in the national strategic reserves. Three seasons of direct government market intervention by China have caused world trade to stay above 9 million tons and world prices to average more than 90 cents per pound. This policy also caused mill use and the market share of cotton in China to decline.

China's entrance into the WTO in December of 2001 marked the start of accelerated growth of the domestic textile industry and an expansion of cotton imports, making China the world's largest importer and consumer of cotton. Under the terms of its accession agreement into the WTO, China is obliged to establish a calendar year tariff-rate-quota (TRQ). The in-quota tariff is 1 percent for the first 894,000 tons of imports each calendar year. Additional import quotas may be released by China based on mill use requirements. The additional quotas can carry a tariff of 1 percent, or be subject to a sliding scale of between 5 percent and 40 percent. The purpose of the sliding scale is to ensure that the effective cost of imported cotton exceeds international market prices and thus boosts domestic prices paid to farmers in China. As a result of government interventions and quotas, domestic cotton prices in China have exceeded international prices since this policy was enacted. In 2003/04, imports of cotton by China reached 2 million tons for the first time, accounting for 27 percent of world trade, and China has remained the largest importer since then. In 2011/12 China imported a record 5.3 million tons (55 percent of world trade) and started to implement a policy of stockpiling cotton in the state reserve.

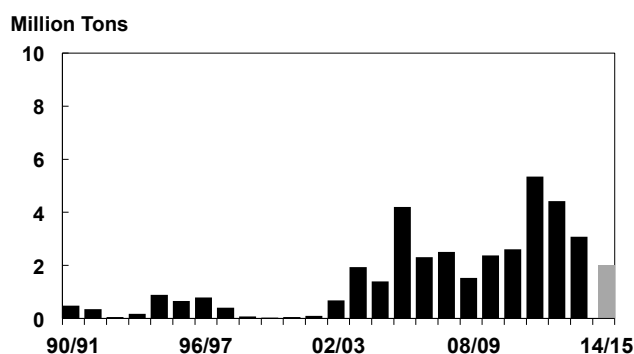

During the past three seasons the Chinese government purchased for its reserves a total of almost 16 million tons. Just during 2013/14, China acquired 6.3 million tons of cotton. During the past two seasons the Chinese government sold about 5 million tons from the reserve to mills at prices averaging close to 135 cents per pound. The size of the reserve at the end of 2013/14 is estimated at 11.4 million tons, accounting for 149 percent of mill use by China in 2013/14 and 57 percent of world stocks. It is likely that China will continue auctioning reserve cotton regularly over the coming year.

In 2013/14, India became the largest supplier of cotton to China, accounting for one third of all imports, or more than 1 million tons. USA and Australia are the next two largest suppliers and account for about 20 percent of Chinese imports each. Uzbekistan, Brazil and West Africa account for most of the remaining volume.

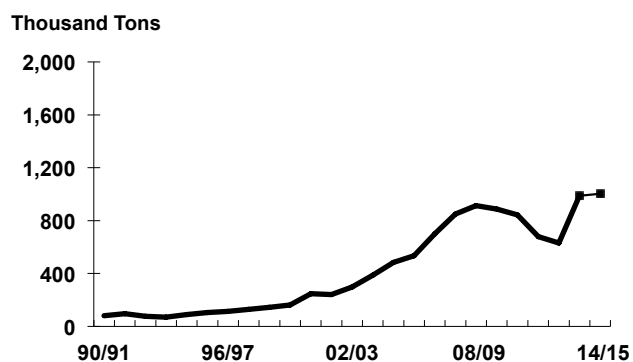

Higher Imports by Bangladesh are Projected

In 2014/15, imports of cotton by Bangladesh are expected to grow by 2 percent to a record 1 million tons due to increasing mill use. This volume will make Bangladesh the world second largest importer after China, accounting for 13 percent of world imports. The robust expansion of weaving and spinning in Bangladesh during the past decade slowed during 2011/12 and 2012/13 due to reduced export demand for textiles and garments and to widespread defaults on cotton contracts in 2010/11 caused by high volatility in cotton prices. Electric power constraints are another factor limiting growth in mill use in Bangladesh. In 2013/14, growth in Bangladesh mill use and imports resumed, as both domestic and export demand for textiles rose. In 2013/14, India remained the largest supplier of cotton to Bangladesh ahead of Uzbekistan. The two countries account for an estimated 60 percent of imports by Bangladesh. Other Central Asian countries and Australia account for most of the rest of Bangladeshi imports. Uzbek and Indian cottons have the largest market share in Bangladesh because of price competitiveness, short delivery times, and quality characteristics preferred by spinners.

IMPORTS: CHINA

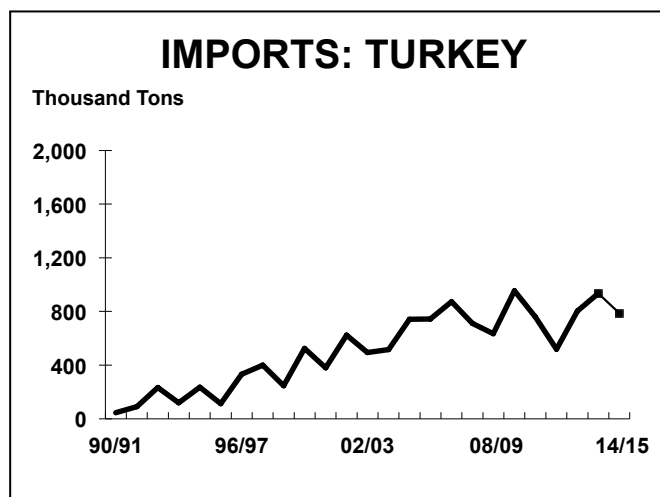

IMPORTS: BANGLADESH

Imports by Turkey are the Third Largest

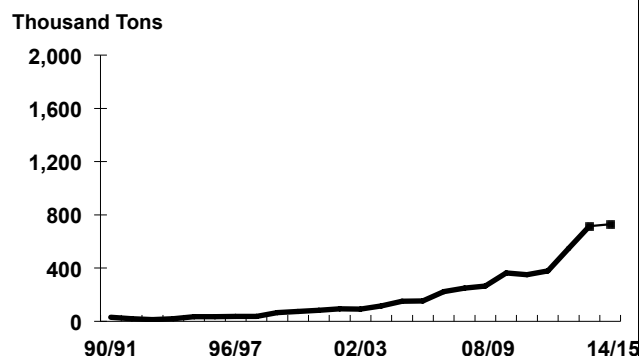

Textile and garment industries remain very significant components of the Turkish economy and account for 8 percent of the country's GDP. Turkey is the second largest textiles exporter to the EU after China and the eighth largest exporter of textiles in the world. Turkey is the fourth largest consumer of cotton after India, China and Pakistan. However, cotton production in Turkey has been declining during recent seasons, leaving an estimated gap of almost 50 percent in mill use demand. As a result, in 2014/15 cotton imports by Turkey are projected at about 800,000 tons, equivalent to 10 percent of world trade, the third largest after China and Bangladesh. In 2013/14, an estimated 60 percent of Turkish imports originated in USA, while the rest originated from Turkmenistan, Greece, Brazil, Tajikistan and Syria. The high share of U.S. cotton in Turkish imports is explained by the importance of GSM-102 credit guarantees, actively used by Turkish buyers. In fiscal year 2013 about \$240 million were used by Turkish importers for cotton, and during fiscal 2014, more than \$400 million were allocated for all commodities. Long-term credit (up to 3 years) and competitive terms for the credit fit well with Turkish banks and importers. Cotton Council International of USA runs an active marketing and promotional campaign in Turkey.

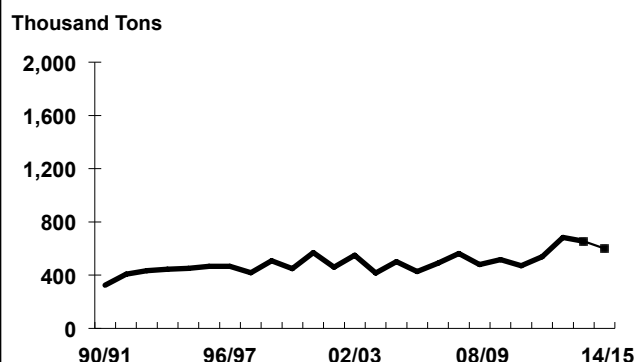

Textile Industry in Vietnam Continues to Expand Fast

The textile industry in Vietnam continues to expand rapidly, causing import demand for cotton to grow significantly. Major boosting factors were the granting of most favored nation status (MFN) by the U.S. in 2001 and the entrance of Vietnam into the World Trade Organization (WTO) in 2007. The government of Vietnam provides strong incentives to foreign investments in textile production. Since 2000 spinning capacity in Vietnam has tripled. Strong demand for cotton yarn from China and Turkey is another factor causing imports of cotton by Vietnam to grow during recent seasons. Cotton mill use in Vietnam is projected to increase by 5 percent during 2014/15 and imports could reach a record 730,000 tons. Vietnam will account for 9 percent of world imports and will be the world's fourth largest importer. USA

IMPORTS: VIETNAM

IMPORTS: INDONESIA

supplies about 40 percent of imports by Vietnam, while India, Australia, Brazil, Pakistan, Australia and African countries supply most of the rest.

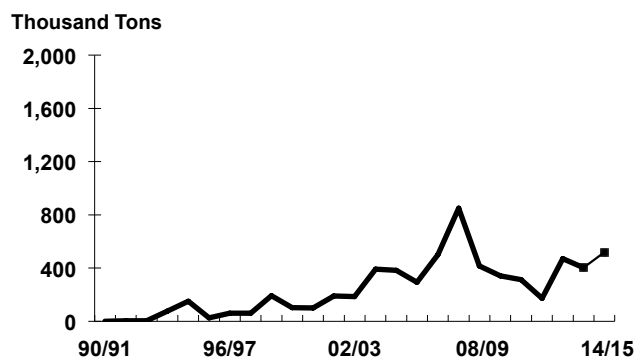

Textile Industry in Indonesia is Recovering

The Indonesian textile industry continues to recover from the effects of high price volatility and contract defaults experienced in 2011. Some of the smaller spinning companies had to close, while larger spinning mills started to expand during 2012/13. Exports of cotton yarn from Indonesia increased during the past two seasons. In 2014/15, mill use in Indonesia is projected to increase by 7 percent to a record 690,000 tons. Imports by Indonesia are projected to reach 600,000 tons in 2014/15, accounting for 8 percent of world trade and the fifth largest in the world. Brazil, USA, Australia, India, Burkina Faso, Mali and Côte d'Ivoire were the major suppliers of cotton to Indonesia in 2013/14.

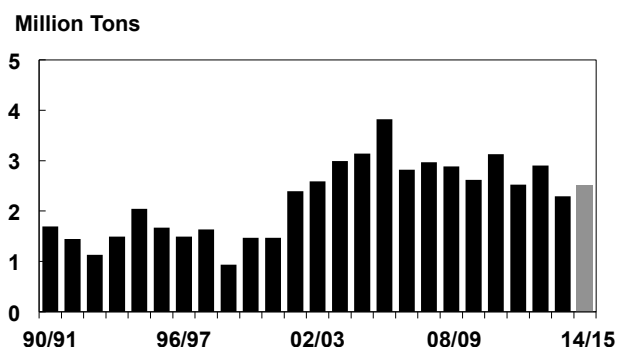

Large Imports by Pakistan

Cotton mill use in Pakistan is increasing, stimulated by growing export demand for textiles as a result of granting duty free status for textile exports by Pakistan to Europe under the Generalized System of Preferences (GSP). Production in Pakistan is expected to rise marginally during 2014/15, but will still remain

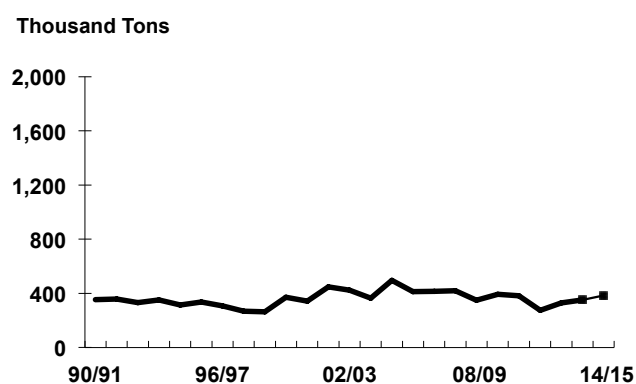

IMPORTS: PAKISTAN

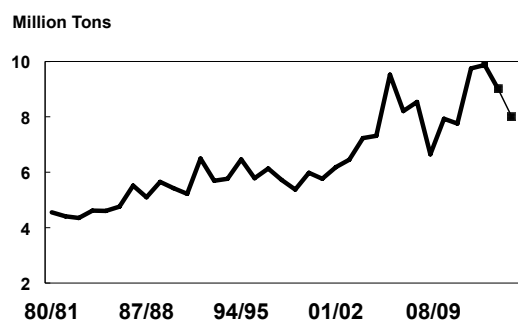

EXPORTS: USA

IMPORTS: THAILAND

WORLD COTTON IMPORTS

behind consumption. Production suffered a setback during last several seasons because of a widespread leaf curl virus disease, while mill use was supported by growing demand for cotton yarn, especially from China. Imports by Pakistan are expected to reach 520,000 tons during 2014/15 accounting for 6.5 percent of world trade. Major sources of imports by Pakistan are India, USA, Brazil, Afghanistan and Greece.

Imports by Thailand Rise

The textile industry in Thailand started to recover during 2012/13, supported by economic growth and increased demand for textile exports, especially for cotton yarn exports to China. In 2014/15, imports of cotton by Thailand are projected to rise by 9 percent to 380,000 tons accounting for 5 percent of world trade. USA, Australia, Brazil, India and West Africa were the largest suppliers of cotton to Thailand in 2013/14.

Exports from USA Projected to Rise

U.S. cotton production in 2014/15 is projected to rise by 30 percent to 3.7 million tons and as a result exports are expected to rise as well, despite anticipated lower imports by China. USA will remain the largest exporter of cotton during 2014/15, accounting for 2.5 million tons or 31 percent of world exports (up from 29 percent in 2013/14). It is estimated that China

accounted for 25 percent of U.S. shipments during 2013/14. Turkey remained the second largest destination for U.S. cotton in 2013/14, accounting for 20 percent of exports, while Vietnam and Mexico accounted for about 10 percent each. Large shipments were made to Indonesia, Korea, Thailand, Peru, Taiwan and Bangladesh.

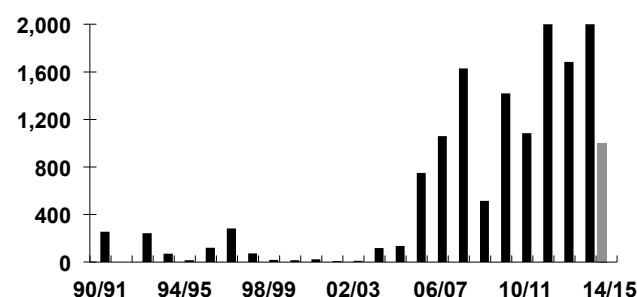

Indian Exports Could Decline

India emerged as one of the largest cotton exporters in 2005/06, with increased domestic production. Favorable growing conditions, a low incidence of pests and diseases, increased planting of new, higher-yielding varieties and Bt cotton, improved crop management practices, increased cotton demand and relatively higher market prices resulted in improved yields, better quality and increased area during the past several seasons.

In 2013/14, Indian exports are estimated at 2 million tons, accounting for 25 percent of world exports. In 2014/15, Indian production could decline by 1 percent while mill use is projected to rise by 5 percent. As a result, Indian exports are projected to drop by almost half to 1.1 million tons, but India will still remain the world's second largest exporter behind USA, accounting for 13 percent of world exports. Indian mill use is growing significantly, benefiting from rising cotton yarn demand from China and Bangladesh.

EXPORTS: INDIA

Thousand Tons

India has a system of Minimum Support Price (MSP), and for 2013/14, the MSP for medium staple cotton (J-34) was set at Rs 3,700 per 100 kg of seed cotton, equivalent to 82 cents per pound of lint at the season average exchange rate. The average domestic price for the same variety during the period was above this level.

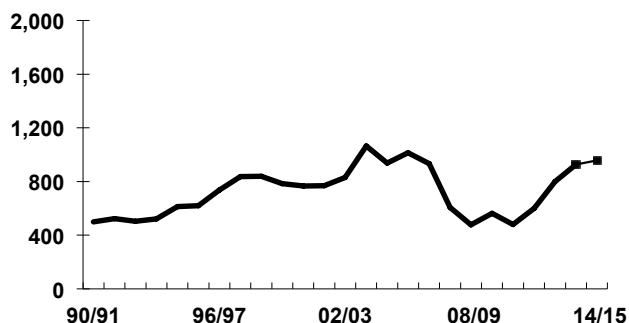

An estimated 60 percent of Indian exports in 2013/14 went to China. Bangladesh accounted for 20 percent of Indian exports and Pakistan for about 10 percent. Vietnam is another growing market for Indian cotton and accounted for 5 percent of Indian shipments. Turkey and East Asian markets are also important destinations for Indian exports. India is importing extra-fine and fine cotton varieties from USA, Egypt and West Africa and also upland varieties based on price considerations. For 2014/15, imports by India are projected at 180,000 tons, up 25 percent from 2013/14.

The CFA Zone Exports Stable

CFA zone cotton production was rising since 2011/12 as a result of relatively high prices received by farmers. In 2014/15, production in the CFA zone is projected almost unchanged at 980,000 tons, which is still below the record of 1.1 million tons reached in 2004/05. In 2014/15, exports from the CFA zone are projected at 940,000 tons. China became the largest destination

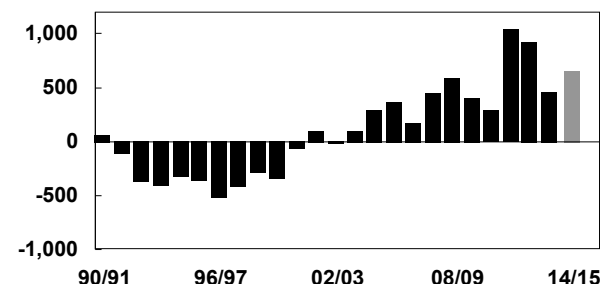

EXPORTS: CFA ZONE

Thousand Tons

NET EXPORTS: BRAZIL *

Thousand Tons

* Exports-Imports

for exports from the CFA zone during the past several seasons, accounting for about half of all shipments. Other countries in East Asia remain important destinations for West African cotton.

Exports from Brazil are Expected to Increase

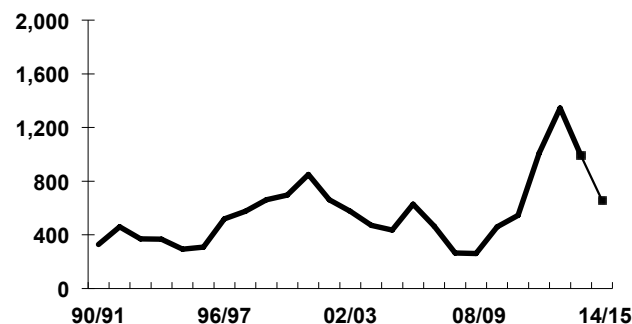

Brazilian cotton production rebounded in 2013/14 by 30 percent to 1.7 million tons as a result of a shift in area to cotton from competing crops and is projected almost unchanged in 2014/15. Brazilian cotton exports are projected to increase during 2014/15 to about 750,000 tons from an estimated 500,000 tons shipped during 2013/14. Brazilian exports are down from a record 1 million tons exported during 2011/12, when production was close to a record 1.9 million tons. Brazil will be the third largest exporter during 2014/15, accounting for 9 percent of world exports. In 2013/14, it is estimated that Indonesia accounted for 25 percent of Brazilian exports, Korea and China for 20 percent each, while Vietnam, Taiwan, Thailand, Malaysia and Turkey for 5-8 percent each.

Exports from Australia Decline

Australian exports reached a record of 1.35 million tons in 2012/13 as a result of two years of extensive rainfall and higher production. Greatly improved water availability and high prices during the past three seasons caused Australian production to remain close to record levels above 1 million tons. However, rainfall declined substantially during 2013 and average storage levels of public irrigation dams in cotton growing regions declined to less than 50 percent of capacity. As a result, area and production declined in 2013/14 and a further reduction is projected for 2014/15. Exports from Australia are projected to decline to 660,000 tons in 2014/15 from 1.1 million tons in 2013/14. Australia is projected to remain the fourth largest exporter of cotton during 2014/15 accounting for 8 percent of world trade. China accounted for an estimated 60 percent of exports from Australia in 2013/14, while Indonesia and Thailand accounted for 7 percent each. Korea, Vietnam, Bangladesh, Pakistan and Malaysia were other major destinations for Australian cotton.

EXPORTS: AUSTRALIA

Thousand Tons

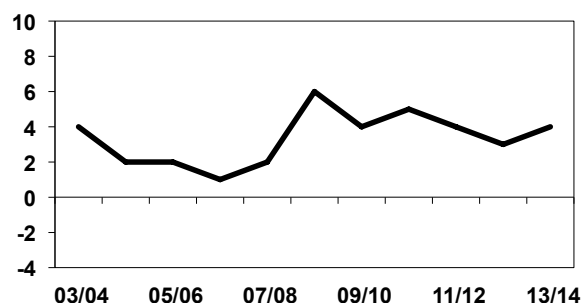

Exports from Uzbekistan Will Remain Stable

Production in Uzbekistan is projected to be stable at 950,000 tons in 2014/15, and exports are projected unchanged at 650,000 tons. Bangladesh, China and Russia are major destinations for cotton from Uzbekistan. The share of cotton directed to domestic mills continues to increase as investments in the spinning sector of Uzbekistan continue to grow benefiting from discounted (by 20 percent) supplies of Uzbek cotton and rising demand for cotton yarn from China and other markets.

Uzbek cotton is traditionally quoted at a premium to the Cotlook A Index. Between 2003/04 and 2009/10, the premium averaged 3 percent. In 2003/04 the premium was 4 percent and gradually declined to 1 percent by 2006/07. During this period, cotton production in Uzbekistan climbed from 900,000 tons to 1.2 million tons. In 2007/08, the premium for Uzbek cotton rose to 2 percent. Between 2008/09 and 2011/12, the premium averaged 5 percent. In 2012/13, the premium was at 3 percent again, and rose to 4 percent during 2013/14. Between 2007/08 and 2013/14, cotton production in Uzbekistan declined from 1.2 million tons to 920,000 tons. The variability in the premium for Uzbek cotton seems to be explained by changes in its supply.

UZBEK PRICE PREMIUM*

Percent

*Uzbek Midd. 1-3/32" to Cotlook A Index

World Extra-fine Production is Increasing in 2014/15

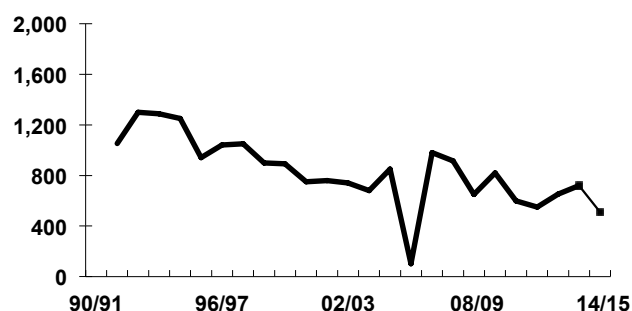

World extra-fine cotton production is projected to increase by 6 percent to 420,000 tons during 2014/15 in response to higher prices at the time of planting compared with 2013/14 rates. This will still be lower than annual production during 2010/11 through 2012/13. Most of the projected increase will be accounted for by Egypt and India. Consumption of extra-fine cotton in producing countries is projected to decline moderately in 2014/15 to 380,000 tons, with most of the decline accounted for by Egypt. Exports could decline by 5 percent to 250,000 tons as a result of reduced supplies in USA.

Biotech Cotton Dominates Trade

Biotech cotton production continues to expand. Based on officially reported data, biotech cotton accounted for 20 percent of world area, 28 percent of world production and 33 percent of world exports in 2002/03. In 2012/13, it is estimated that biotech cotton accounted for 66 percent of world area, 69 percent of world production, and 61 percent of exports. World exports of biotech cotton are estimated based on production shares in exporting countries. The largest exporters of biotech cotton are

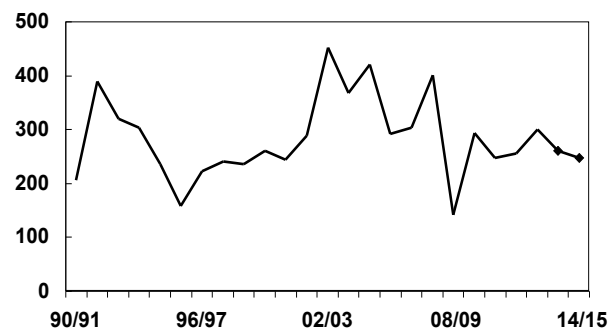

EXPORTS: UZBEKISTAN

Thousand Tons

EXPORTS: EXTRA-FINE COTTON

Thousand Tons

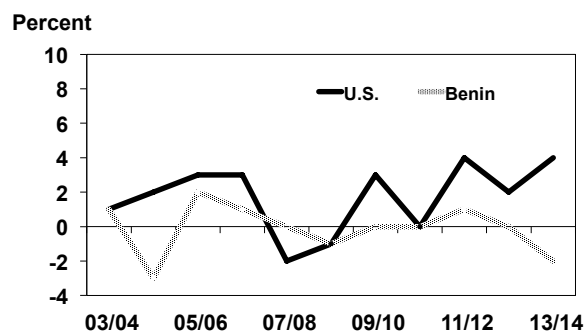

USA, India, Australia and Brazil.

It is evident that the share of biotech cotton in textiles traded in all markets is rising and now exceeds two-thirds of production. There are no price differentials for biotech and non-biotech cotton fiber or textiles containing biotech cotton. There is no evidence of rejection or price discrimination against biotech cotton, nor evidence of price premiums for non-biotech cotton, by any segment of the market or region. In practice, markets do not identify biotech cotton content, but rather evaluate cotton properties based on quality characteristics.

For example, a comparison of long-term price ratios of medium grades of U.S. Memphis/Orleans/Texas and Benin Bela quotes to the Cotlook A Index indicates that, most of the time, U.S. (biotech) cotton enjoys an equal or higher premium to the A Index compared with (non-biotech) cotton from Benin. Although other factors, such as contamination or a lack of HVI data may limit the premium for Benin cotton, U.S. cotton is not sold at a discount. It also seems that the introduction of biotech cotton in Burkina Faso in 2008/09 did not lead to reduced premiums. Premiums for Burkina Faso cotton were stable between 2007/08 and 2011/12, but declined moderately during the past two seasons. Premiums paid for Indian cotton (90 percent of which is

biotech) had the same trend as Burkina Faso. Analyses of quotes for Australian and Brazilian middling 1-1/32" (both countries are planting biotech cotton) indicate that these growths (when quoted) enjoyed high premiums to the A Index during the past ten seasons.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1984/85, Argentina reports exports to China (Taiwan) of 20,730 tons; China (Taiwan) reports imports from Argentina of 19,740 tons. Imports may differ from exports for a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

1/ Data on exports by Paraguay and Zimbabwe during 1984/85 are not available.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1987/88, Argentina reports exports to China (Taiwan) of 5,700 tons; China (Taiwan) reports imports from Argentina of 16,610 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1994/95, Australia reports exports to Japan of 89,000 tons; Japan reports imports from Australia of 90,110 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1999/00, Australia reports exports to Japan of 136,400 tons; Japan reports imports from Australia of 131,250 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2004/05, Australia reports exports to Japan of 43,770 tons; Japan reports imports from Australia of 44,350 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2009/10, Australia reports exports to Japan of 18,190 tons; Japan reports imports from Australia of 17,830 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.
