DEVELOPMENTS IN WORLD COTTON TRADE

World cotton trade was boosted during the three seasons between 2011/12 and 2013/14 by the Chinese policy of stockpiling domestically produced cotton, which induced large imports of lower-priced foreign growths. During 2011/12, world imports jumped by 2 million tons to 9.8 million tons and stayed above, or close to 9 million tons during the next two years. As a result of the end of the stockpiling cotton in the national reserve (estimated at 11 million tons at the end of 2014/15) and consequent fall of Chinese imports, world cotton trade declined to 7.6 million tons in 2014/15. During its existence, this policy helped to keep the international trade of cotton at record levels and supported domestic and international prices. Slow growth in world production and consumption, and large stocks in China are likely to translate into negligible growth in world trade in the near future.

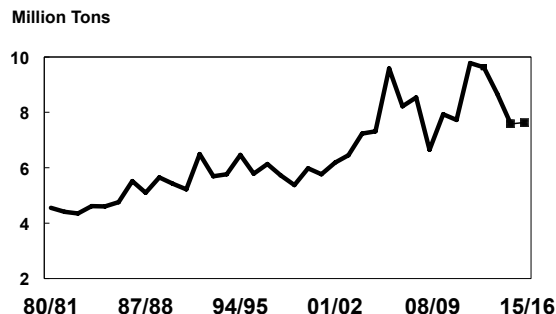

World cotton imports are projected to remain unchanged at 7.6 million tons in 2015/16. A decrease of 12% in imports by China is expected to be offset by increases in other countries that rely on imports. Imports outside of China are projected to

increase by 5% to six million tons. China, Bangladesh, Vietnam, Indonesia, Turkey, Pakistan and Thailand will remain the world's largest importers in 2014/15, accounting for 76% of world imports.

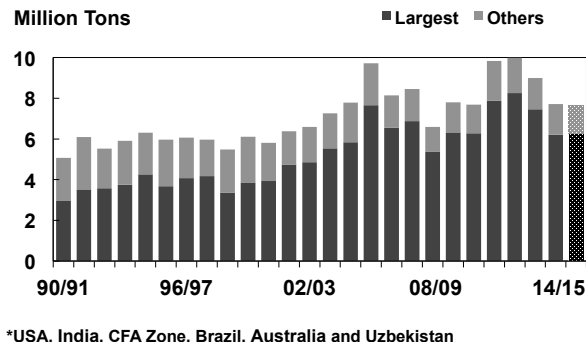

USA, India, Francophone Africa, Brazil, Uzbekistan and Australia will remain the largest exporters during 2015/16, accounting for 82% of world exports. Exports by USA, Brazil, Australia and Uzbekistan are projected to decline and be offset by increased exports from India and Francophone Africa.

World imports as a share of cotton mill use averaged 32% during the ten seasons between 2001/02 and 2010/11. In 2011/12, the share rose to a record 43% and stayed above long-term average during the next two years because of record imports by China. During 2014/15, the share declined to 31% and is projected to stay at this level in 2015/16, because of the projected lack of growth in world trade. World exports as a share of world cotton production also averaged 32% between 2001/02 and 2010/11, and also stayed above long-term average during the next three seasons, reaching 37% in 2012/13. This share is projected to re-

Million Tons

Asia Others

turn to 32% in 2015/16. The lowest shares of trade to production and mill use since 1990/91 were recorded in 2008/09, at 28%.

Substantial changes in cotton trade flows occurred during the past fifteen years. The decline in mill use in developed economies and the rapid expansion in Asia led to a major shift in the destination of world exports. Asia became the primary destination for cotton shipments during the past one and a half decades. In 1998/99, Asia accounted for 58% of world mill use, 47% of world imports and 4% of world exports. In 2015/16, we project that Asia will account for 79% of world mill use, 79% of world imports and 18% of world exports.

Imports by China will Decline

In 2015/16, imports by China are projected to decline by 12% to 1.6 million tons and will account for 20% of world imports. 2014/15 was the first season after the Chinese government ended its policy of building reserves, which was in effect during the previous three seasons, and instead provided direct subsidies to cotton producers in Xinjiang with a target price of 19,800 yuan per ton (about 146 cts/lb). A smaller subsidy was provided to producers in other provinces. China is the world's largest producer, consumer and importer of cotton, and cotton policies

in that country have a major impact on fiber trade and prices. Three seasons of implementation of this policy of rebuilding government reserves by the Chinese government provided support to domestic and international prices and helped to keep world trade at record levels. At the same time, this policy also caused mill use and the market share of cotton in China to shrink. Any release of the reserves to domestic mills will reduce the need for imports and limit growth in world trade.

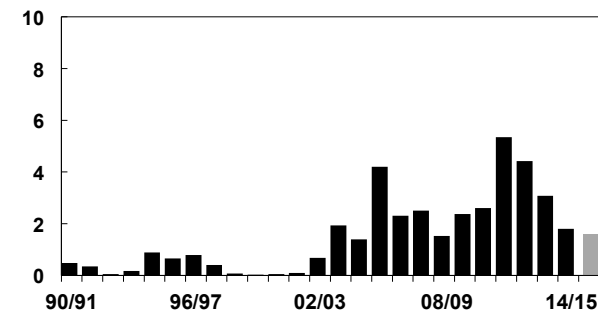

In the three seasons prior to 2014/15 China implemented a system of minimum support prices by directly purchasing cotton from producers and rebuilding the government strategic reserve. During this period the Chinese government purchased for its reserves a total of 16 million tons, selling some of it later to spinning mills. The size of the reserve at the end of 2014/15 is estimated at 11 million tons, accounting for 145% of mill use by China and 50% of world stocks.

During the same three seasons (2011/12, 2012/13 and 2013/14) China imported 12.8 million tons of cotton, while most of the cotton produced domestically was acquired by the government and has been stored in the national strategic reserves.

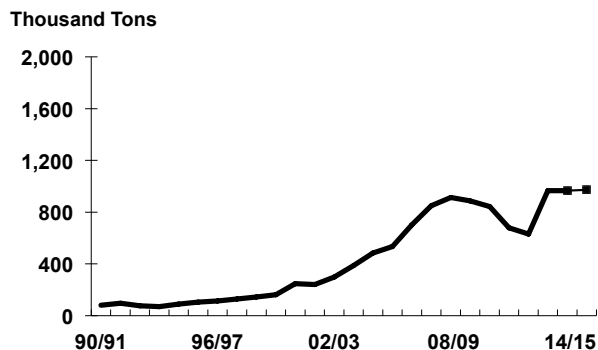

China is expected to continue curbing imports during 2015/16

IMPORTS: CHINA

Million Tons

IMPORTS: BANGLADESH

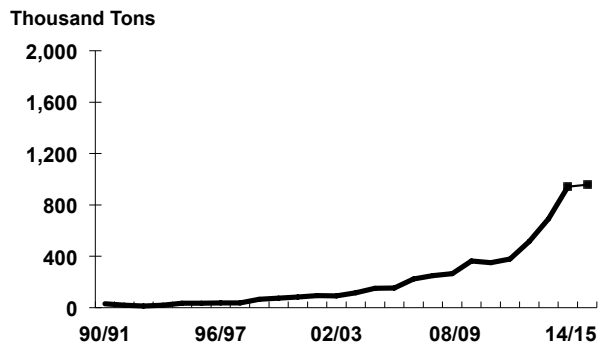

by limiting the release of import quotas and to try to release cotton from the reserve to mills. Under the terms of its accession agreement to the WTO, China is obliged to establish a tariff-rate-quota (TRQ). The in-quota tariff is 1% for the first 894,000 tons of imports each calendar year. Additional quotas can carry a tariff of 1%, or be subject to a sliding scale of between 5% and 40%. The purpose of the sliding scale is to ensure that the effective cost of imported cotton exceeds international market prices and thus boosts prices paid to farmers in China. As a result of government interventions and quotas, domestic cotton prices in China have exceeded international prices since this policy was enacted. In 2011/12 China imported a record 5.3 million tons of lower-priced foreign cotton (55% of world trade).

In 2014/15, USA became the largest supplier of cotton to China, accounting for one third of all imports, or about 600,000 tons. Australia and India were the next two largest suppliers and accounted for cumulative 36% of Chinese imports. Uzbekistan, Brazil and West Africa are responsible for most of the remaining volume.

Imports by Bangladesh are Growing

Bangladesh is expected to remain the second largest importer of cotton in 2015/16, with imports estimated close to one million tons and accounting for 13% of world imports. The robust expansion of weaving and spinning in Bangladesh during the past decade slowed during 2011/12 and 2012/13 due to reduced export demand for textiles and garments and to widespread defaults on cotton contracts in 2010/11, caused by high volatility in cotton prices. Electric power constraints are another factor limiting growth in mill use in Bangladesh. In 2013/14, growth in Bangladesh mill use and imports resumed, as both domestic and export demand for textiles rose. In 2014/15, India and Uzbekistan remained the largest suppliers of cotton to Bangladesh. The two countries account for an estimated 60% of imports by Bangladesh. Other Central Asian countries and Australia supply most of the rest of Bangladeshi imports. Uzbek and Indian cottons have the largest market share in Bangladesh because of price competitiveness, short delivery times, and quality characteristics preferred by spinners.

IMPORTS: VIETNAM

Textile Industry in Vietnam Continues to Grow

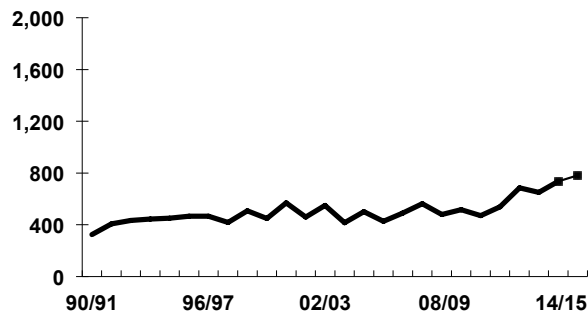

Cotton mill use in Vietnam is projected to increase by 13% during 2015/16 and imports could reach a record of 960,000 tons. Vietnam will account for 13% of world imports and be the world's third largest importer for the first time. The textile industry in Vietnam continues to expand rapidly, causing import demand for cotton to grow significantly. Major boosting factors were the granting of most favored nation status (MFN) by the U.S. in 2001 and the entrance of Vietnam into the World Trade Organization (WTO) in 2007. The government of Vietnam provides sizeable incentives for foreign investments in textile production. Significant investments in spinning industry in Vietnam continue in view of potential opportunities offered by Trans-Pacific Partnership Agreement (TPP) and Free Trade Agreement with the EU. Since 2000, spinning capacity in Vietnam has tripled. Strong demand for cotton yarn from China and Turkey is another factor causing imports of cotton by Vietnam to grow during recent seasons. USA supplies about 30% of imports by Vietnam, while India, Australia, Brazil, and African countries provide most of the rest.

Cotton Mill Use in Indonesia is Expanding

Imports by Indonesia are projected to increase by 6% in 2015/16 and reach a record of 780,000 tons. Indonesia would then account for 10% of world trade and be the fourth largest cotton importer in the world. The Indonesian textile industry continues to recover from the effects of high price volatility and contract defaults experienced in 2011. Some of the smaller spinning companies had to discontinue their operations, while larger spinning mills started to expand during 2012/13. Cotton gained some of the market share from polyester recently in Indonesia due to lower prices. Exports of cotton yarn from Indonesia, mostly to China, increased during the past three seasons. In 2014/15, mill use in Indonesia rose by an estimated 7% to a record 760,000 tons. Brazil, USA, Australia, India, Burkina Faso, Mali and Côte d'Ivoire were the major suppliers of cotton to Indonesia in 2014/15.

IMPORTS: INDONESIA

Thousand Tons

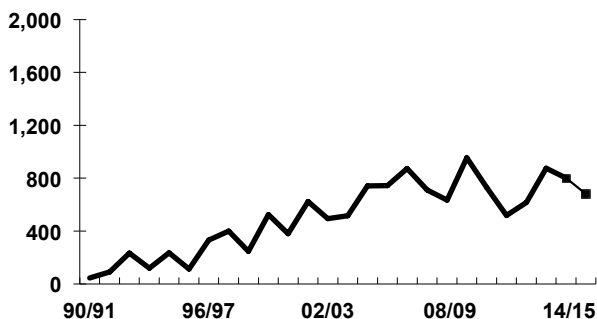

Imports by Turkey Remain Large

Cotton production in Turkey is projected to decline during 2015/16 due to lower prices. Turkey remains dependent on cotton imports for about half of its mill use. In 2015/16, cotton imports by Turkey are projected to decline to 680,000 tons, equivalent to 9% of world trade, the fifth largest after China, Bangladesh, Vietnam and Indonesia. Textile and garment industries remain very significant components of the Turkish economy and account for 8% of the country's GDP. Turkey is the second largest textiles exporter to the E.U. after China and is the fourth largest consumer of cotton after India, China and Pakistan. In 2014/15, more than 40% of Turkish imports originated in USA, while the rest came from Turkmenistan, Greece, Brazil, Tajikistan and Syria. The high share of U.S. cotton in Turkish imports is explained by the importance of GSM-102 credit guarantees, actively used by Turkish buyers. In fiscal year 2013 about \$240 million were used by Turkish importers for cotton, and during fiscal 2014, close to \$100 million were used. Long-term credit (up to 18 months) and competitive terms for the credit fit well with Turkish banks and importers. Cotton Council International of USA runs an active marketing and promotional campaign in Turkey.

IMPORTS: TURKEY

Thousand Tons

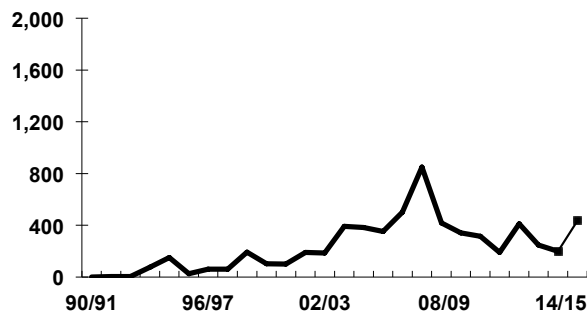

Imports by Pakistan Could Double

During 2015/16, imports by Pakistan are expected to more than double, reaching 430,000 tons and accounting for 6% of world trade. Cotton mill use in Pakistan is increasing, stimulated by growing export demand for textiles as a result of granting duty free status for textile exports of Pakistan to Europe under the Generalized System of Preferences (GSP). Production in Pakistan is expected to decline during 2015/16 by an estimated 250,000 tons causing imports to rise. Production suffered a setback during last several seasons because of a widespread leaf curl virus disease, while mill use was supported by growing demand for cotton yarn, especially from China. Major sources of imports by Pakistan are India, USA, Afghanistan, Brazil, and Greece.

IMPORTS: PAKISTAN

Thousand Tons

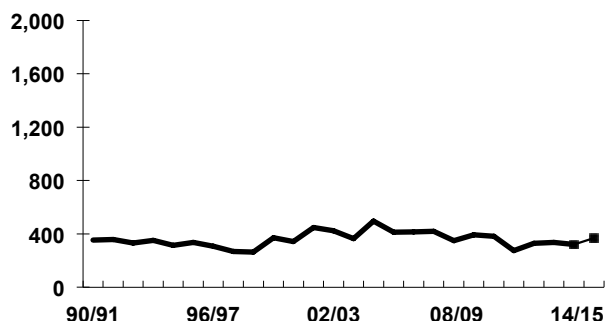

Imports by Thailand Rise

In 2015/16, imports of cotton by Thailand are projected to rise to 370,000 tons, accounting for 5% of world trade. The textile industry in Thailand started to recover during 2012/13, supported by economic growth and increased demand for textile exports, especially for cotton yarn exports to China. USA, Australia, Brazil, India and West Africa were the largest suppliers of cotton to Thailand in 2014/15.

IMPORTS: THAILAND

Thousand Tons

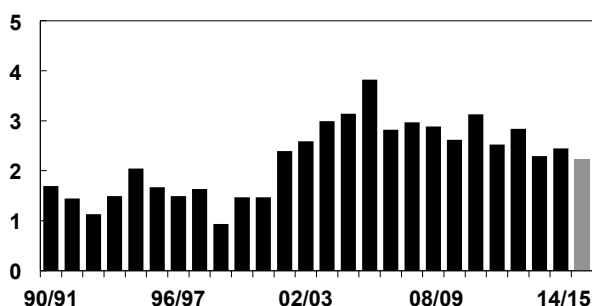

Lower Exports Projected from USA

U.S. cotton production in 2015/16 is projected to decline by 11% to 3.2 million tons. As a result of a smaller exportable surplus, exports are expected to decline as well, affected also by the anticipated lower imports by China. USA will remain the largest exporter of cotton during 2015/16, accounting for 2.2 million tons or 29% of world exports (down from 32% in 2014/15). It is estimated that China accounted for 24% of U.S. shipments during 2014/15. Vietnam became the second largest destination for U.S. cotton in 2014/15, accounting for 16% of exports, ahead of Turkey, which accounted for 13% of U.S. exports. Mexico accounted for about 8%. Large shipments were made to Indonesia, Korea, Thailand, Taiwan and Peru.

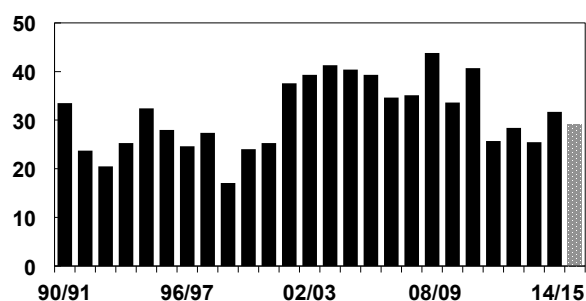

EXPORTS: USA

World Market Share (%)

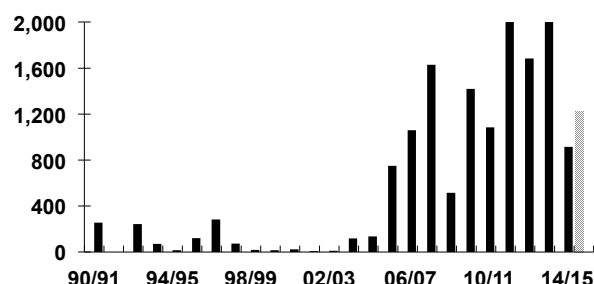

Indian Exports Set to Increase

In 20014/15, Indian exports dropped by 55% to 915,000 tons, as a quarter of Indian crop was acquired by government organizations at Minimum Support Price (MSP) set above market prices. For 2014/15, the MSP for medium staple cotton (J-34) was set at Rs3,950 per 100 kg of seed cotton, equivalent to 85

EXPORTS: INDIA

Thousand Tons

US cts/lb of lint at the season average exchange rate. Domestic prices in India stayed below the MSP during 2014/15. As a result, the Cotton Corporation of India, an agency of the central government, and state cotton organizations directly purchased an estimated 1.6 million tons of cotton at MSP prices.

India emerged as one of the largest cotton exporters in 2005/06, with increased domestic production. Favorable growing conditions, a low incidence of pests and diseases, increased planting of new, higher-yielding varieties and biotech cotton. Improved crop management practices, increased cotton demand and relatively higher market prices resulted in improved yields, better quality and increased area during the past several seasons. In 2013/14, India exported 2 million tons, accounting for 25% of world exports. It is projected that in 2015/16, Indian exports could rebound by 33% and reach 1.2 million tons. India will remain the world's second largest exporter behind USA, accounting for 16% of world exports.

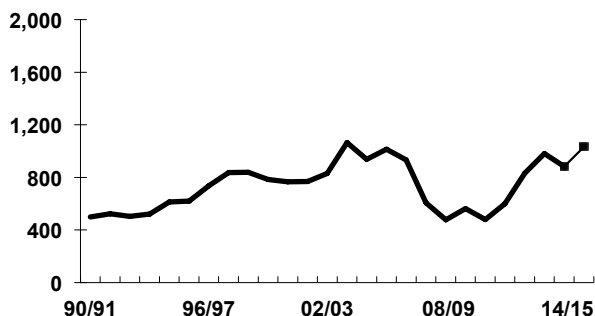

An estimated 38% of Indian exports in 2014/15 went to Bangladesh, while China accounted for 31%. Vietnam accounted for 14% and Pakistan for about 7% of Indian exports in 2014/15. East Asian markets are also important destinations for India. India is importing extra-fine and fine cotton varieties from USA, Egypt and West Africa and also some upland varieties based on price considerations. For 2015/16, imports by India are projected at 270,000 tons.

CFA Zone Exports Rise

CFA zone cotton production was rising since 2011/12 and reached the second largest volume in 2014/15 at 1.1 million tons, due to relatively high prices received by farmers. In 2015/16, production in the CFA zone is projected close to one million tons, leading to a historically high availability for exports. In 2015/16, exports from the CFA zone are projected at one million tons. China became the largest destination for exports from the CFA zone during the past several seasons, accounting for about half of all shipments. Other countries in East Asia remain significant destinations for West African cotton.

Exports from Brazil Expected to Decline

Brazilian cotton production rebounded in 2013/14 by 30% to 1.7 million tons as a result of a shift in area to cotton from competing crops and then declined during 2014/15 due to a less competitive cotton prices leading to a decline in plantings. Little change in production is projected for 2015/16. Brazilian cotton exports are projected at 770,000 tons in 2015/16 (down 10%). Brazilian exports reached a record of one million tons during 2011/12, when production was close to a record 1.9 million tons. Brazil will be the third largest exporter during 2015/16, accounting for 10% of world exports. In 2014/15, Indonesia accounted for 22% of Brazilian exports, China for 20%, Vietnam and Korea for 11% each. Vietnam, Taiwan, Thailand, Malaysia and Turkey account for most of the remaining volume.

Exports from Uzbekistan Will Remain Stable

Production in Uzbekistan is projected to be stable at about 900,000 tons in 2015/16, and exports are projected little changed at close to 600,000 tons. Bangladesh, China and Russia are major destinations for cotton from Uzbekistan. The share of cotton directed to domestic mills continues to increase as investments

in the spinning sector of Uzbekistan continue to grow, benefiting from discounted (by 20%) supplies of Uzbek cotton and rising demand for cotton yarn from China and other markets.

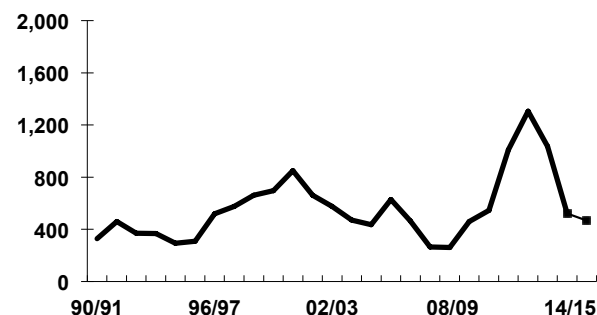

Uzbek cotton is traditionally quoted at a premium to the Cotlook A Index. Between 2003/04 and 2009/10, the premium averaged 3%. In 2003/04 the premium was 4% and gradually declined to 1% by 2006/07. During this period, cotton production in Uzbekistan climbed from 900,000 tons to 1.2 million tons. In 2007/08, the premium for Uzbek cotton rose to 2%. Between 2008/09 and 2011/12, the premium averaged 5%. In 2012/13, the premium was at 3% again, and rose to 4% during 2013/14 and to 6% in 2014/15. Between 2007/08 and 2014/15, cotton production in Uzbekistan declined from 1.2 million tons to 885,000 tons. The variability in the premium for Uzbek cotton seems to be explained by changes in its supply.

Exports from Australia Decline

Australian exports reached a record of 1.35 million tons in 2012/13 as a result of two years of extensive rainfall and higher production. Greatly improved water availability and high prices during 2012/13 caused Australian production to remain above one million tons and close to record levels. However, rainfall

EXPORTS: AUSTRALIA

Thousand Tons

declined substantially during 2013/14 and 2014/15 and average storage levels of public irrigation dams in cotton growing regions dropped. As a result, area and production declined in 2014/15 and no improvement is expected in 2015/16. Exports from Australia are projected to decline to 470,000 tons in 2015/16 from 520,000 tons in 2014/15 and 1.1 million tons in 2013/14. Australia is projected to be the fifth largest exporter of cotton during 2015/16 and comprise 6% of world trade. China accounted for an estimated 50% of exports from Australia in 2014/15, while Indonesia accounted for 10% and Thailand for 7%. Korea, Vietnam, Bangladesh, Pakistan and Malaysia were other major destinations for Australian cotton.

World Extra-fine Exports Could Increase

World extra-fine cotton production rose by 11% during 2014/15 to 430,000 tons and is projected stable during 2015/16 in response to a higher ratio of extra-fine prices to upland cotton at the time of planting for both crops. This will still be lower than annual production during 2010/11 through 2012/13. Most of the projected increase will take place in China. Consumption of extra-fine cotton in producing countries is also projected stable in 2015/16 at about 370,000 tons, with moderate increase in

China. Exports of extra-fine cotton could rise by 14% to 190,000 tons as a result of higher demand by China.

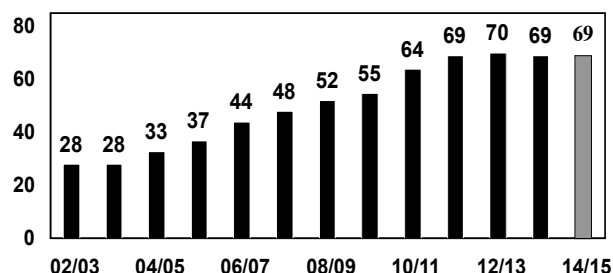

Biotech Cotton Dominates Trade

Biotech cotton production continues to expand. Based on officially reported data, biotech cotton accounted for 20% of world area, 28% of world production and 33% of world exports in 2002/03. In 2014/15, it is estimated that biotech cotton accounted for 66% of world area, 69% of world production, and 60% of exports. World exports of biotech cotton are estimated based on production shares in exporting countries. The largest exporters of biotech cotton are USA, India, Australia and Brazil.

It is evident that the share of biotech cotton in textiles traded in all markets is rising and now exceeds two-thirds of production. There are no price differentials for biotech and non-biotech cotton fiber or textiles containing biotech cotton. There is no evidence of rejection or price discrimination against biotech cotton, nor evidence of price premiums for non-biotech cotton, by any segment of the market or region. In practice, markets do not identify biotech cotton content, but rather evaluate cotton properties based on quality characteristics.

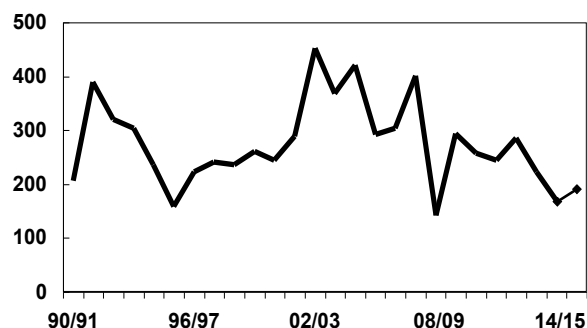

BIOTECH COTTON PRODUCTION

Percent of World Total

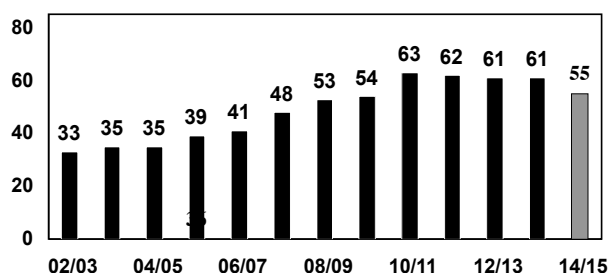

EXPORTS: EXTRA-FINE COTTON

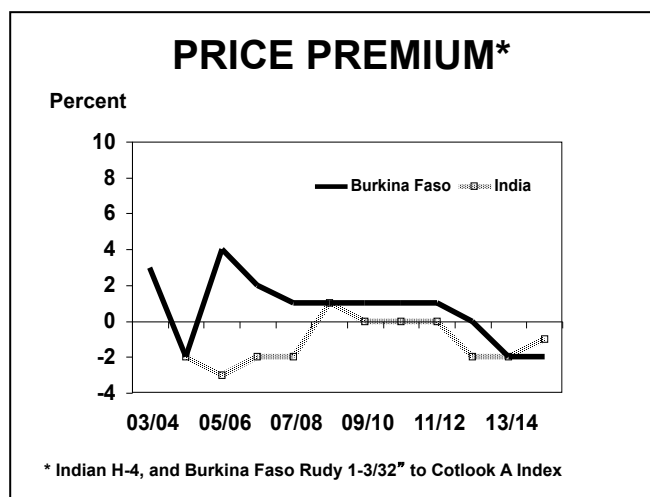

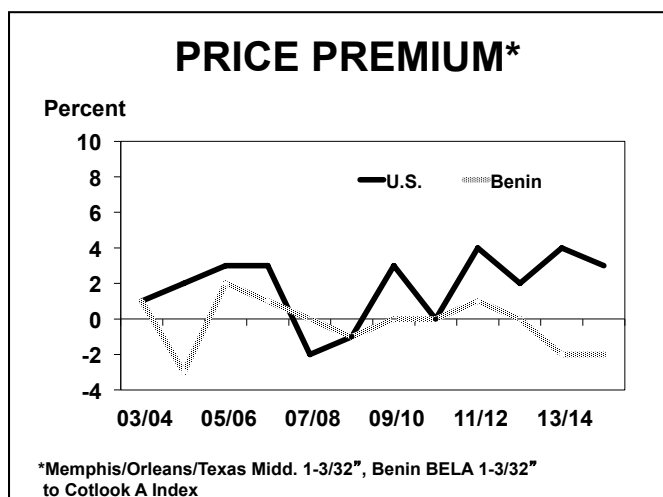

Thousand Tons

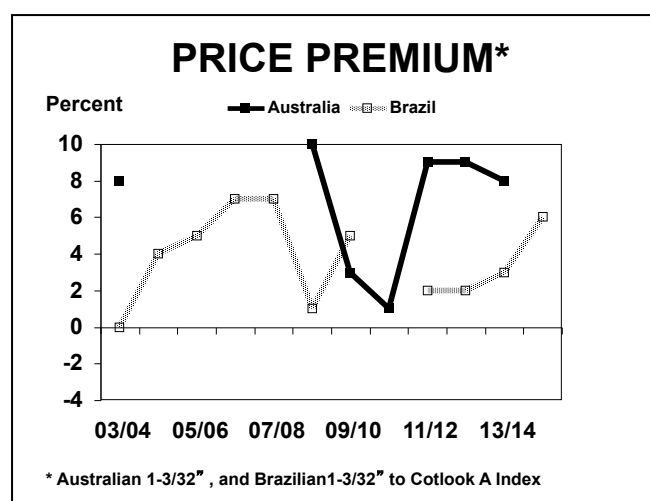

BIOTECH COTTON EXPORTS

Percent of World Total

For example, a comparison of long-term price ratios of medium grades of U.S. Memphis/Orleans/Texas and Benin Bela quotes to the Cotlook A Index indicates that, most of the time, U.S. (biotech) cotton enjoys an equal or higher premium to the A Index compared with (non-biotech) cotton from Benin. Although other factors, such as contamination or a lack of HVI data may limit the premium for Benin cotton, U.S. cotton is not sold at a discount. It also seems that the introduction of biotech cotton in Burkina Faso in 2008/09 did not lead to reduced premiums. Premiums for Burkina Faso cotton were stable between 2007/08 and 2011/12, but declined moderately during the past three seasons. Premiums paid for Indian cotton (90% of which is biotech) showed the same trend as Burkina Faso. Analyses of quotes for Australian and Brazilian middling 1-1/32" (both countries are planting biotech cotton) indicate that these growths (when quoted) enjoyed high premiums to the A Index during the past ten seasons.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1984/85, Argentina reports exports to China (Taiwan) of 20,730 tons; China (Taiwan) reports imports from Argentina of 19,740 tons. Imports may differ from exports for a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

1/ Data on exports by Paraguay and Zimbabwe during 1984/85 are not available.

*The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1988/89, Argentina reports exports to China (Taiwan) of 13,640 tons; China (Taiwan) reports imports from Argentina of 8,880 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1994/95, Australia reports exports to Japan of 89,000 tons; Japan reports imports from Australia of 90,110 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1999/00, Australia reports exports to Japan of 136,400 tons; Japan reports imports from Australia of 131,250 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2004/05, Australia reports exports to Japan of 43,770 tons; Japan reports imports from Australia of 44,350 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2009/10, Australia reports exports to Japan of 18,190 tons; Japan reports imports from Australia of 17,830 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.
