DEVELOPMENTS IN THE WORLD COTTON TRADE

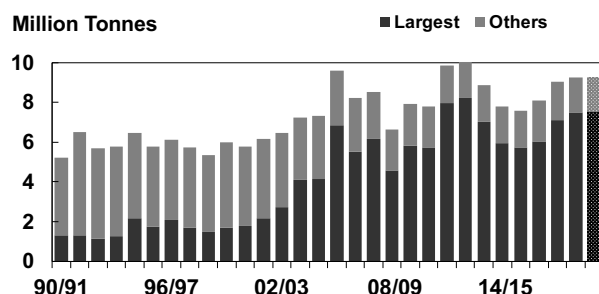

World cotton trade exceeded 9 million tonnes in 2018/19 for the second season in a row. Rising world cotton mill use, and the continuing depletion of Chinese government stockpiles, contributed to the expansion in cotton trade. In 2011/12 and 2012/13, world trade reached record levels above 10 million tonnes, boosted by the Chinese policy of stockpiling domestically produced cotton and relying on substantial imports of lower-priced foreign growths. The end of cotton stockpiling in China led to a decline in Chinese imports, from record-high levels to an average of 8 million tonnes from 2014/15 to 2016/17. Accelerated growth in world mill use and declining stocks in China are likely to translate into expansion in world trade in the near future.

World cotton imports are projected to be almost unchanged in 2019/20 at 9.3 million tonnes. Imports by growing East Asian textile-based economies are projected to grow the most in 2019/20 driven by growing demand and declining stocks in China. China, Bangladesh, Vietnam, Indonesia, Turkey, Pakistan and Thailand will remain the world's largest importers in 2019/20, accounting for 80% of world imports.

USA, Brazil, Francophone Africa, India, Australia and Greece will remain the largest exporters in 2019/20, accounting for 75% of world exports. Exports from Australia and Brazil are projected to decline but will be offset by increased exports from USA, Francophone Africa and India.

World imports as a share of cotton mill use averaged 31% over the 10 seasons between 2001/02 and 2010/11. In 2011/12, the share rose to a record 44% and stayed above the long-term average over the next two years due to record-high Chinese imports. The share declined to an estimated 33% from 2014/15 to 2018/19 and is projected to reach 35% in 2019/20. World exports as a share of world

cotton production also averaged 32% between 2001/02 and 2010/11 and stayed above the long-term average over the next three seasons. The share declined to 34% from 2014/15 to 2018/19 but is projected to reach 35% in 2019/20. The lowest shares of trade to production and mill use since 1990/91 were recorded in 2008/09, at 28%.

WORLD COTTON EXPORTS

Percent of Production

Substantial changes in cotton trade flows have occurred over the past 20 years. The decline in mill use in developed economies and the rapid expansion of the spinning industry in Asia has led to a major shift in the destinations for world exports. Asia has become the primary destination for cotton shipments over the past 20 years. In 1998/99, Asia accounted for 58% of world mill use, 47% of world imports and 4% of world exports. In 2019/20, Asia is projected to account for 80% of world mill use, 86% of world imports and 11% of world exports.

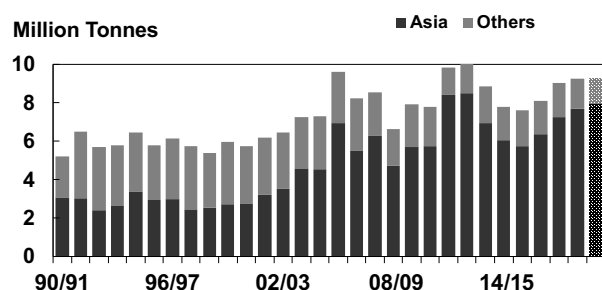

Changing Origins for China's Imports

During the past several seasons, China restricted imports by limiting the release of import quotas and releasing cotton from the government reserve to mills. Under the terms of its accession agreement to the WTO, China is obliged to establish a tariff-rate-quota (TRQ). The in-quota tariff is 1% for the first 894,000 tonnes of imports each calendar year. Additional quotas can carry a tariff of 1% or be subject to a sliding scale of between 5% and 40%. The purpose of the sliding scale is to ensure that the effective cost of imported cotton exceeds international market prices and thus boosts prices paid to farmers in China. An additional import sliding scale quota for 800,000 tonnes was issued by China in 2018/19; as a result, imports by China increased by a similar amount to 2.1 million tonnes — the largest import figures in five seasons — because of rising demand and shrinking stocks in the government reserves. The release of the reserves to domestic mills continues, but the quality of the remaining stocks is often below spinning mills' requirements. It is projected that imports by China will stay above 2 million tonnes and China will be the largest importer in 2019/20, accounting for 23% of world imports.

In July 2018, China imposed a 25% tariff on about \$50 billion of US imports (including various US agricultural products, including cotton) as retaliation against tariffs imposed earlier by the USA on Chinese products. USA was the world's largest exporter of cotton in 2017/18,

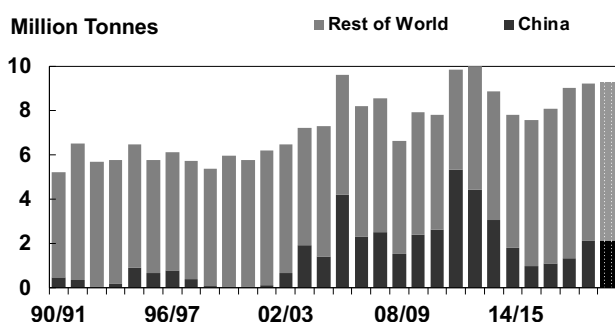

WORLD IMPORTS

Million Tonnes

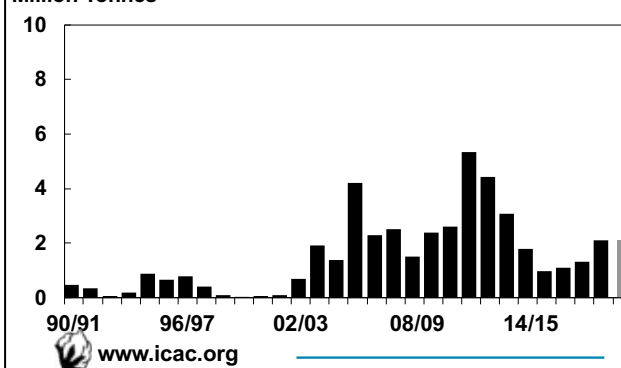

IMPORTS

Million Tonnes

IMPORTS: CHINA

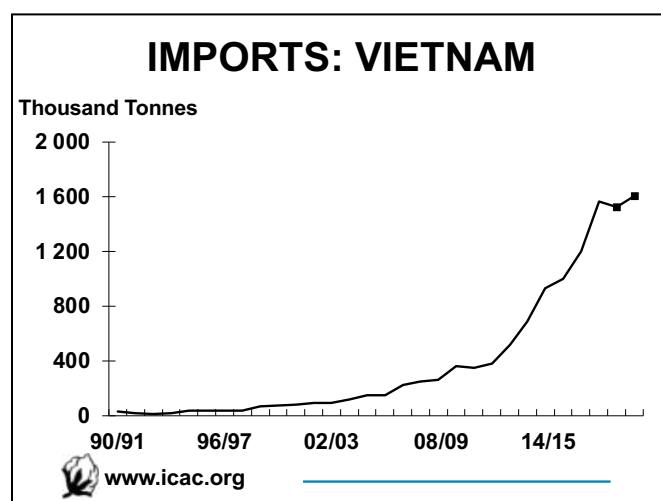

Million Tonnes

accounting for 3.5 million tonnes (38% of world exports) and for 45% of Chinese imports. Because of the 25% tariff imposed by China on imports of US cotton, the US share of Chinese imports declined substantially in 2018/19 to an estimated 17%, while other major exporters increased their share of the Chinese market. In 2018/19, Australia's share of the Chinese market more than doubled to 28%, Brazil's rose fivefold to 22%, and India's tripled to 14%. Tariff increases on US cotton exports to China might also have been a driver of the recently declining cotton prices.

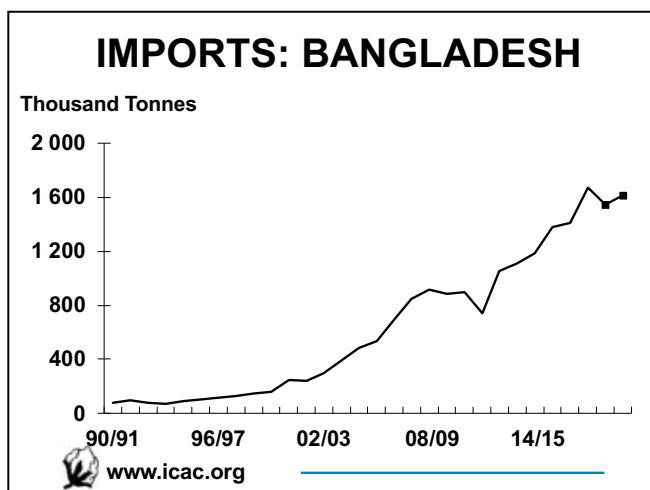

Textile Industry Expansion in Vietnam Continues

The textile industry in Vietnam has attracted substantial investments, including spinning, weaving and knitting, dyeing, and finishing. Cotton mill use in Vietnam continues to show robust growth, and imports are projected to increase by 4% in 2019/20 to 1.6 million tonnes. Major textile industry growth factors included the granting of most favoured nation (MFN) status by the USA in 2001 and the accession of Vietnam to the World Trade Organisation in 2007. The government of Vietnam provides sizeable incentives for foreign investments in textile production. Since 2000, spinning capacity in Vietnam has tripled. Strong demand for cotton yarn from China and Turkey is another factor causing Vietnam to increase its imports in recent seasons. Vietnam is projected to become the world's second-largest importer after China and will account for 17% of world imports in 2019/20. USA supplies about 50% of Vietnamese imports, while India, Australia, Brazil, and African countries provide most of the remaining 50%.

Bangladesh Is Importing More

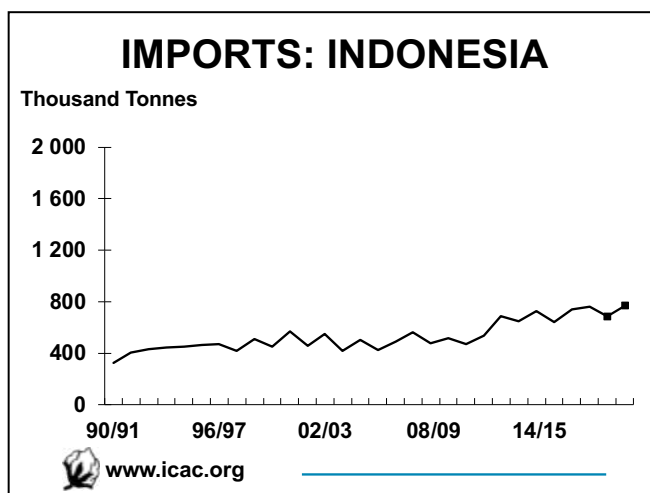

Imports by Bangladesh are projected to increase by 4%, reaching 1.6 million tonnes in 2019/20 and accounting for 17% of world imports. Exports of value-added products support growth in mill use and imports of cotton. It is projected that Bangladesh will be the third-largest importer

of cotton in 2018/19. Mill use in Bangladesh continues to grow, supported by the expansion of textile exports and improvements in the supply chain. India recently became the largest supplier of cotton to Bangladesh, as Uzbekistan's share of Bangladesh imports is declining. Africa, USA, and Australia supply most of the rest of Bangladeshi imports. Indian growths have the largest market share in Bangladesh because of price competitiveness, short delivery times, and the quality characteristics preferred by spinners.

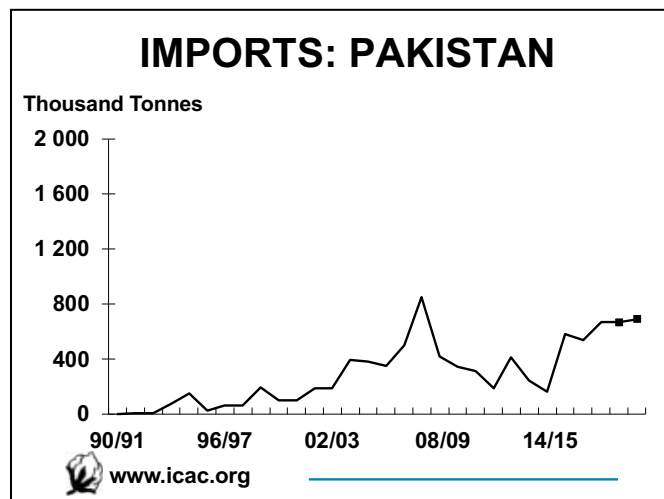

Cotton Mill Use in Indonesia is Rising

Cotton mill use in Indonesia is projected to continue growing in 2019/20 as spinning mills are running at a higher capacity, and cotton has regained some market share from polyester. Imports by Indonesia are projected to increase by about 11% in 2019/20, reaching 770,000 tonnes, a gain of 130,000 tonnes over the last four seasons. Indonesia is projected to account for 8% of world imports and is the fourth-largest cotton importer in the world. Indonesia is a large exporter of cotton yarn to China. In 2018/19, the USA accounted for 35% of Indonesian cotton imports. Brazil, Australia, India, Greece and Africa were the other major suppliers of cotton to Indonesia.

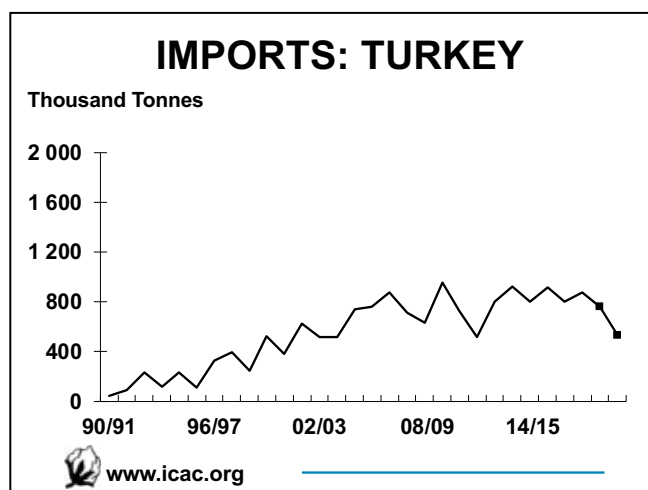

Imports by Pakistan Remain High

Production in Pakistan is not projected to grow noticeably in 2019/20. Production suffered setbacks in recent seasons due to widespread damage caused by insects and the leaf curl virus. It is projected that in 2019/20, production will remain close to 1.6 million tonnes, compared with 1.8 million tonnes in 2017/18. Mill use in Pakistan is projected to remain close to 2.4 million tonnes in 2019/20. As a result, Pakistan's cotton imports are projected to remain significant, estimated at 690,000 tonnes. Significant demand for cotton yarn, especially from China — in addition to increasing demand for textiles as the result of the European Union's (EU) granting of duty-free status for Pakistan's textile exports under the Generalised System of Preferences (GSP) — support cotton mill use in Pakistan. Imports by Pakistan will account for 7% of the world's total in 2019/20. Major sources of imports by Pakistan are USA (40%), India (30%), Afghanistan (7%), as well as Brazil and Central Asia.

Turkey Imports Expected to Decline

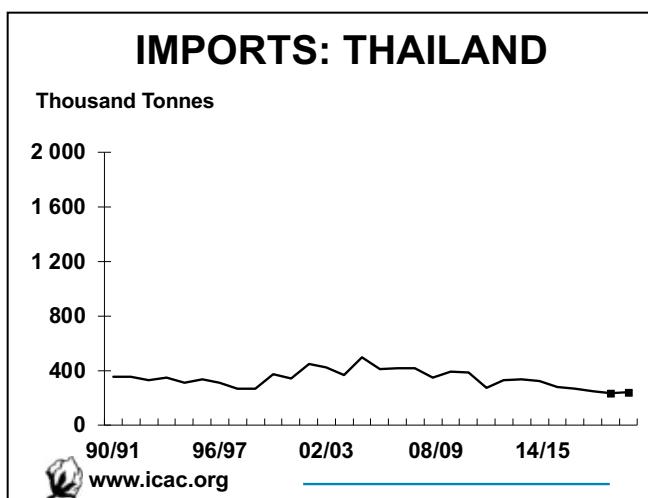

Cotton mill use in Turkey is projected to grow in 2019/20, reaching 1.6 million tonnes. Even though modest growth in production in Turkey is projected, production is expected to reach 1 million tonnes, meaning the domestic spinning industry will remain dependent on imports for about half of its mill use. In 2019/20, cotton imports by Turkey are projected to decline by 30% to 540,000 tonnes, equivalent to 6% of world trade and the sixth largest after China, Vietnam, Bangladesh, Indonesia and Pakistan. The textile and garment industries remain key components of the Turkish economy and account for 8% of the country's GDP as well as 16% of exports. Turkey is the second-largest textile exporter to the EU after China and is the fifth-largest consumer of cotton after China, India, Pakistan and Bangladesh. Since April 2016, US cotton is subject to a 3% anti-dumping duty in Turkey. Despite the duty, about 45% of Turkish imports in 2018/19 originated in USA, while the

balance came from Greece, Brazil, Azerbaijan, Australia, Turkmenistan, and Argentina. The high share of US cotton in Turkish imports is explained by the importance of GSM-102 credit guarantees, actively used by Turkish buyers. Long-term credit (up to 18 months) and competitive credit terms fit well with Turkish banks and importers. The USA's Cotton Council International runs an active marketing and promotional campaign in Turkey.

Imports by Thailand Remain Stable

In 2019/20, Thailand's cotton mill use and imports are projected to remain almost unchanged at 240,000 tonnes, accounting for 3% of world trade. The textile industry in Thailand started to recover in 2012/13, supported by economic growth and increased demand for textile exports, especially cotton yarn exports to China. However, over the past three seasons, cotton mill use and imports suffered some setbacks due to increased competition from cheaper cotton yarn from Vietnam and India, resulting in larger inventories of cotton yarn. Projected slower economic growth and increasing competition could lead to stagnation in demand and imports of cotton. The USA accounts for more than half of Thailand's cotton imports.

Brazil, Australia, India, Argentina and West Africa were other major suppliers of cotton to Thailand in 2018/19.

Exports from the USA are Projected to Grow

USA remains the world's largest exporter and is projected to increase exports by 8% in 2019/20 to reach 3.5 million tonnes, largely due to a sharp increase (up 19%) in production. USA will account for 37% of world exports (up from 35% in 2018/19). In 2018/19, US cotton was subject to a 25% tariff in China. The share of US cotton exports shipped to China declined from 16% in 2017/18 to an estimated 10% in 2018/19. Vietnam remained the largest destination for U.S. cotton in 2018/19, accounting for 25% of exports (up from 20% in 2017/18). In the past decade, US cotton exports to Vietnam have undergone extremely rapid growth, rising from 166,000 tonnes in 2008/09 to 830,000 tonnes in 2018/19. Turkey's share remained unchanged in 2018/19 at about 10%, while Pakistan was the fourth-largest importer of US cotton and accounted for 9% of US shipments in 2018/19. Large shipments were also

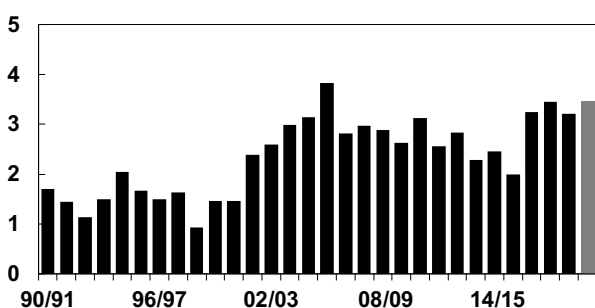

made to Indonesia, India, Bangladesh, Mexico, Thailand, Korea and Taiwan.

Exports from Brazil Expected to Remain High

Brazil became the major beneficiary of the tariff escalation between USA and China in 2018/19 and was able to increase exports to China sharply, replacing US cotton. The increase was also aided by a significant increase in production in Brazil in 2018/19, which rose by third to a record 2.7 million tonnes and is projected to remain at this level in 2019/20, largely as a result of higher domestic prices and a relatively weak Brazilian real. As a result, exportable surplus in Brazil rose substantially and exports by Brazil rose by 45% in 2018/19, reaching a record of 1.3 million tonnes, and are projected to remain at this level in 2019/20. Brazil will remain the second-largest exporter in 2019/20, accounting for 16% of world exports. In 2018/19, China became the largest destination for Brazilian cotton, accounting for 34% of exports (up from 9% in 2017/18). Indonesia was the second major destination, accounting for 15% (down from 20%) and Vietnam was the third-largest destination, accounting for 13% (down from 21% in 2017/18) of Brazilian exports. Bangladesh, Turkey, Malaysia, Korea, Pakistan and Thailand account for most of the remaining volume.

CFA Zone Exports Rise

CFA Zone cotton production is projected to rise in 2019/20 for the fourth consecutive season, reaching 1.3 million tonnes — the largest volume on record — due to relatively high prices received by farmers. Increased production will provide a historically high amount of fibre for exports. In 2019/20, exports from the CFA zone are projected to increase by 6%, reaching 1.3 million tonnes and accounting for 14% of world exports. China and East Asian destinations have become the most important in the composition of the CFA zone exports.

EXPORTS: CFA ZONE

Thousand Tonnes

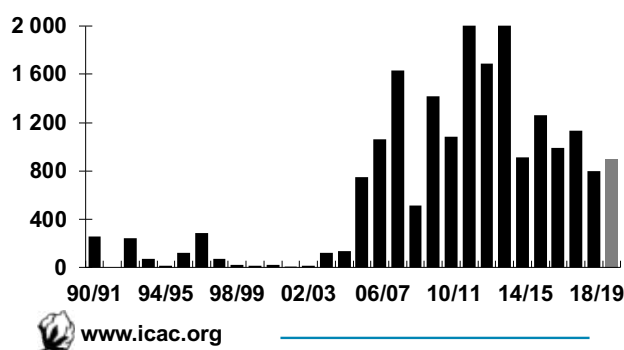

Indian Exports Set to Increase

India's cotton production is expected to increase by 6% in 2019/20, increasing the exportable surplus. Exports by India are projected to increase by 13% in 2018/19 to 900,000 tonnes and account for 10% of world exports. India emerged as one of the largest cotton exporters in 2005/06 as a result of increased domestic production. Favourable growing conditions, low incidence of pests and diseases, increased planting of new higher-yielding varieties, and biotech cotton led to the higher output. Improved crop management practices, increased cotton demand and relatively high market prices resulted in improved yields, better quality and increased area over the past several seasons. In 2011/12, India had a large exportable supply and exported 2.4 million tonnes, accounting for 24% of world exports.

In 2018/19, Bangladesh was the largest destination for Indian cotton, accounting for an estimated 30% of Indian exports (down from 36% in 2017/18), while China accounted for 29% (up from 11% in 2017/18). Vietnam accounted for 15% (down from 18% in 2017/18) of Indian exports. East Asian markets are also important destinations for In-

EXPORTS: INDIA

Thousand Tonnes

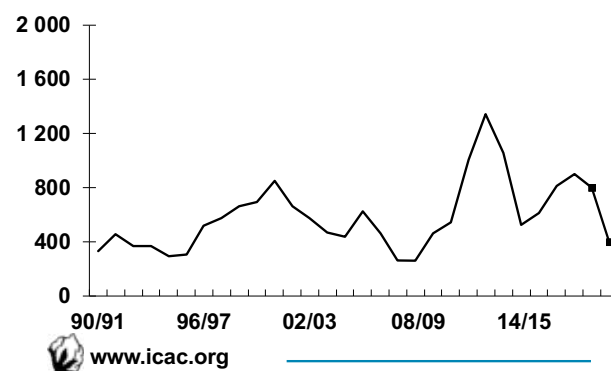

dia. India imports extra-fine and fine cotton varieties from USA, Egypt and West Africa, as well as some upland varieties based on price considerations. For 2019/20, imports by India are projected to remain stable at 350,000 tonnes.

Exports from Australia Declining

Cotton production in Australia dropped by more than half in 2018/19 and is not expected to recover in 2019/20 because of a sharp reduction in water supply. Exports from Australia in 2019/20 are expected to decline by half to 400,000 tonnes, and Australia is projected to be the fifth-largest exporter, accounting for 4% of world trade. Australian exports reached a record of 1.35 million tonnes in 2012/13 as a result of two years of abundant rainfall and higher production. China accounted for an estimated 35% of exports from Australia in 2018/19, Vietnam accounted for 15% and Bangladesh for 8%. Indonesia, Thailand and India were the other major destinations for Australian cotton.

EXPORTS: AUSTRALIA

Thousand Tonnes

Exports from Greece Remains Stable

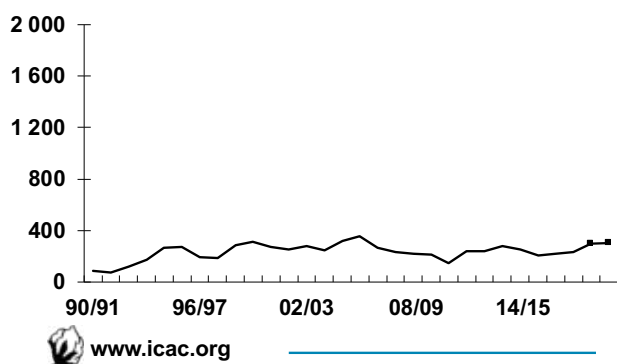

Production in Greece rose by 40% in 2018/19 and reached 310,000 tonnes. It is projected that in 2019/20, production will increase moderately to 320,000 tonnes, keeping exportable balance almost unchanged. It is projected that Greek cotton exports will remain close to 300,000 tonnes in 2019/20. In 2018/19, Turkey was the major destination for Greek exports, accounting for a third of all shipments. Egypt was the second-largest importer from Greece, accounting for 17%, while China was the third-largest destination, accounting for 11%. Indonesia, Bangladesh, Vietnam and Pakistan were the other major destinations for Greek cotton.

World Extra-Fine Exports Stable

World production of extra-fine cotton increased by 8% in 2018/19 to an estimated 460,000 tonnes. The largest increases took place in Egypt and USA, while production declined moderately in India, China, Israel and Turk-

EXPORTS: GREECE

Thousand Tonnes

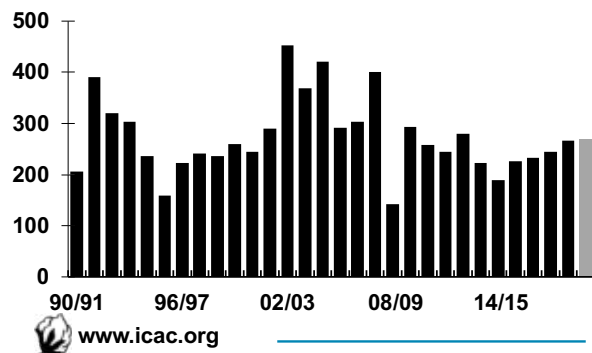

menistan. Both area and yields increased substantially in Egypt, with production almost doubling in 2018/19 to reach 110,000 tonnes. In the USA, higher prices at the time of planting for 2018/19 and favourable weather conditions led to an increase in extra-fine area. As a result, US production of extra-fine cotton rose by 14% in 2018/19, reaching 175,000 tonnes. In 2019/20, world production of extra-fine cotton is projected to decline to 420,000 tonnes, mostly because of declines in USA and China.

Consumption of extra-fine cotton among extra-fine cotton producers is projected to be virtually unchanged in 2019/20 at 360,000 tonnes. The largest mill use of extra-fine cotton in 2019/29 is projected for China (160,000 tonnes) and India (150,000 tonnes). No changes in exports of extra-fine cotton are projected for 2019/20 and are estimated at 265,000 tonnes despite reduced production, as stocks of extra-fine cotton remain high. USA, Egypt and Central Asia will account for most of exports in 2019/20. China and India will remain the largest importers of extra-fine cotton. World stocks of extra-fine cotton rose by 12% in 2018/19, reaching 265,000 tonnes, and are equal to world exports of extra-fine. Little change in stocks is expected in 2019/20.

EXPORTS: EXTRA-FINE COTTON

Thousand Tonnes

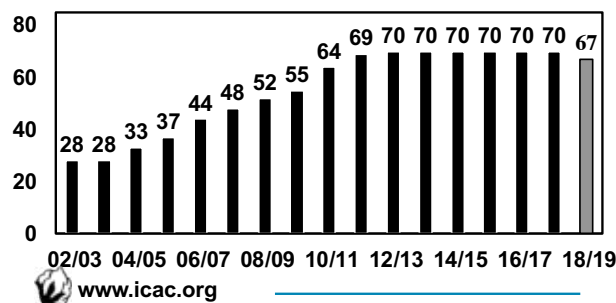

Biotech Cotton Dominates Trade

Biotech cotton production remains significant. Based on officially reported data, biotech cotton accounted for 20% of world area, 28% of world production and 33% of world exports in 2002/03. In 2018/19, it is estimated that biotech cotton accounted for 66% of world area, 65% of world production, and 58% of exports. World exports of biotech cotton are estimated based on production shares in exporting countries. The largest exporters of biotech cotton are USA, India, Australia and Brazil.

The share of biotech cotton in textiles traded in all markets is clearly rising and now exceeds two-thirds of production. There are no price differentials between biotech and non-biotech cotton fibre, or textiles containing biotech and non-biotech cotton. No evidence exists of rejection or price discrimination against biotech cotton or of price premiums for non-biotech cotton, in any segment of the market or region. In practice, markets do not generally identify biotech cotton content, but rather evaluate cotton properties based on quality characteristics.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1984/85, Argentina reports exports to China (Taiwan) of 20,730 tons; China (Taiwan) reports imports from Argentina of 19,740 tons. Imports may differ from exports for a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

1/ Data on exports by Paraguay and Zimbabwe during 1984/85 are not available.

*The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1986/87, Argentina reports exports to China (Taiwan) of 250 tons; China (Taiwan) reports imports from Argentina of 200 tons. Imports may differ from exports in a given season because of time spent in transit; changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1992/93, Argentina reports exports to Germany of 4,340 tons; Germany reports imports from Argentina of 7,640 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

1/ Central Asian exports outside the former USSR.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1997/98, Australia reports exports to Japan of 102,750 tons; Japan reports imports from Australia of 98,190 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2003/04, Australia reports exports to Japan of 52,290 tons; Japan reports imports from Australia of 49,080 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2008/09, Australia reports exports to Japan of 19,700 tons; Japan reports imports from Australia of 19,900 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2013/14, Australia reports exports to Japan of 14,760 tons; Japan reports imports from Australia of 14,580 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.
